LIGHT GAUGE METAL FRAMING GENERAL NOTES

1. Minimum yield strength shall be as follows:
   A. 43 mils (18 gauge) and lighter (33 ksi):
      a. Carbon Sheet Steel to be Painted: ASTM A1003, Grade 33, TYPE H.
      b. Galvanized: ASTM A653, SS GRADE 33.
   B. 54 mils (16 gauge) and heavier (50 ksi):
      a. Carbon Sheet Steel to be Painted: ASTM A1003, Grade 50, TYPE H.
      b. Galvanized: ASTM A653, SS GRADE 50.

2. Manufacturer and Properties: Member of Steel Stud Manufacturer's Association (SSMA) complying with ICC-ESR 3064P or Camco applying with ICC-ESR 3016 or Clark-Dietrich complying with ICC ESR-1166P. Provide punched studs as scheduled in these drawings with minimum effective section properties as indicated in referenced evaluation report.

3. Design Gauge Thicknesses: Indicated properties are based on the following thicknesses:
   12 ga. - 0.1017 inch, 97 mils 14 ga. - 0.0713 inch, 68 mils 16 ga. - 0.0566 inch, 54 mils
   18 ga. - 0.0451 inch, 43 mils 20 ga. - 0.0346 inch, 33 mils

4. Track Material: Provide unpunched track of dimensions to ensure proper fit of studs with minimum effective section properties as indicated in referenced evaluation report.

5. Lateral Bridging for Studs: Required when rigid wall finish does not continue full height on either or both sides of studs. Install horizontal straps or cold-rolled channels as shown and in accordance with Section D3 of AISI specification. See typical details.|

6. Lateral Blocking for Joists: Joists shall be braced by full depth blocking at all points of support. See Typical details for additional locations of joist blocking.

7. Joist Web Punch-Out Locations: Web punch-outs shall not be located closer than twice the member depth from edge of bearing support or concentrated loads, 12" minimum. Do not provide punchouts at tracks.

8. Securing Studs and Braces: Plumb, align and tightly nest in both upper and lower tracks with secure attachment to both flanges of tracks. Splices in axial loaded studs and braces are not permitted.

9. Self-Drilling Screws: See General Notes.

10. Welding: ANSI/AWS D1.3 and CBC Section 2210A. Wire tying of framing components is not permitted.
    A. Welder Certification: Governing Code Authority.
    B. Electrodes: E60XX at 33 ksi members, E70XX at 50 ksi members.
    C. Touch-Up: Zinc-rich paint at galvanized members and regular paint at carbon sheet steel.

MASONRY

1. Specified Compressive Strength of Masonry (f'm): 2000 psi typical unless noted otherwise.

2. Verifying Specified Compressive Strength of Masonry (f'm): Use masonry prism testing method unless otherwise acceptable to Architect (Structural Engineer). Submit masonry prism data for each type and compressive strength of masonry required, with a professional engineer's signature and state of California seal, to Architect (Structural Engineer). Compliance with minimum required compressive strength shall be based on Applicable Code Section 2105A.2.

3. Concrete Block: ASTM C90, medium weight, attaining a minimum compressive strength as required to meet specified compressive strength of masonry (f'm). Completed (grouted and mortared) masonry assembly not to exceed 115 pcf max. dry density.

4. Face Brick: ASTM C216.

5. Portland Cement for Mortar and Grout: ASTM C150, type I or II. Use of masonry cement or plastic cement is not permitted.

6. Aggregates for Mortar and Grout:
   A. Aggregates for Mortar: ASTM C144.
   B. Aggregates for Grout: ASTM C404, coarse type.

7. Mortar: ASTM C270, Type S, attaining a minimum compressive strength as required to meet specified compressive strength of masonry (f'm)

8. Grout: ASTM C476, coarse type, attaining a minimum compressive strength as required to meet specified compressive strength of masonry (f'm). However, in no case shall grout compressive strength be less than the greater of f'm or 2000 psi at 28 days.

9. Reinforcing Steel: Reinforcing steel section of general notes unless indicated otherwise.

10. Masonry Wall Penetration Submittal: Submit for each wall indicating size and location of each wall penetration and opening as necessary for affected trades. Submit together with appropriate reinforcing steel shop drawings. Submit written statement from Special Inspector that no additional penetrations or openings were added to those shown in penetration submittal.

11. Reinforcing Steel Splices: Lap reinforcing steel at splices a minimum of 72 bar diameters, except dowels in footings at base of walls shall splice a minimum of 72 bar diameters, unless noted otherwise. Where minimum clear distance between bars at adjacent splices is 3 inches or less, increase lap length 30 percent unless splices are staggered at least 24 bar diameters.

12. Dowels for Walls, Columns, Pilasters, and Piers: Match size and spacing of vertical reinforcing steel, unless noted otherwise. Set dowels to align with cells containing reinforcing steel.

13. Minimum Reinforcing Steel Clearances:
    A. Minimum Clearances Between Reinforcing and Outside Face of Masonry: 2 inches except in no case shall clearance be less than 2-1/2 bar diameters.
    B. Minimum Clearance Between Reinforcing and Inside Face of Grout Cell: 1/2 inch or 1 bar diameter whichever is greater.
    C. Minimum Clearance Distances Between Parallel Reinforcing: 1 inch or nominal bar diameter, whichever is greater. Increase to 1-1/2 inches or 1-1/2 times nominal bar diameter, whichever is greater, at columns, pilasters, and piers only.

14. Placement: Set courses in running bond pattern unless indicated otherwise. Set cells in vertical alignment. Provide flush mortar joints at surfaces to receive waterproofing or damp-proofing.

15. Grouting: Grout solid all cells. Mechanically vibrate grout in cells.
    A. Grout Height Limits: CBC Section 2104A.1.3, TMS 602, Article 3.5 D
    B. Horizontal Construction Joints: Hold grout 1 1/2 inches below top of masonry unit if work is stopped one hour longer.
    C. Grout Cover Around Reinforcing Steel, Anchor Bolts and Inserts Penetrating Masonry Shell: 1 inch minimum.

16. Horizontal Bars Terminating at Wall Ends and Opening Jambs: Extend bars to within 2 inches of end of wall and provide standard ACI 90-degree hook unless detailed otherwise.

17. Control joints shall be provided as indicated on Arch and wall elevations per detail 01/2-S6.61. If not indicated on Arch, provide control joints at 25'-0" O/C maximum and coordinate w/ Arch.

PROPRIETARY ANCHORAGES and FASTENERS

1. Anchorages:
   A. Drill and Epoxy Anchors and Rebar:
      a. At Concrete: Hilti HIT-RE 500 V3 adhesive anchor system complying with ICC-ES Evaluation Report ESR-3814.
      b. At Masonry: Hilti HIT-HY 270 adhesive anchor system complying with ICC-ES Evaluation Report ESR-4143.
      c. Provide anchor type, size and embedment as indicated in details.
      d. Overhead applications must be installed using the Hilti HIT-SZ piston plug system.
   B. Mechanical (Expansion) Anchors:
      a. At Concrete: Hilti KB-TZ2 carbon steel expansion anchor complying with ICC-ES Evaluation Report ESR-4266.
      b. At Masonry: Hilti KB-TZ2 carbon steel expansion anchor complying with ICC-ES Evaluation Report ESR-4561.
      c. Where mechanical anchor is exposed to weather, provide stainless steel anchor conforming to the Evaluation Report in lieu of carbon steel.
   C. Welded Shear Studs: Nelson S3L flux filled, headed stud anchors, 65,000 psi minimum ultimate tensile strength conforming to ASTM A29, automatically end welded in field and complying with ICC-ES Evaluation Report ESR-2856.
   D. Welded Deformed Anchors: Nelson D2L, cold rolled, deformed steel reinforcing bars conforming to ASTM A1064 and complying with ICC-ES Evaluation Report ESR-2907.
2. Fasteners:
   A. Power/Powder Actuated Fasteners (Indicated "Shot Pins" or "PAF" on Drawings): Hilti Low-velocity Power Actuated Drive, 0.157" diameter (X-U), complying with ICC-ES Report ESR-2269. Provide appropriate washer between fastener head and light gauge metal or wood surface. Shot pins shall not be used @ PT slab or beams.
   B. Self-Drilling Metal Screws (Indicated "Screws" or "SMS" on Drawings): Hilti Self Drilling Screw complying with current ICC-ES Evaluation Report ESR-2196.
   C. Concrete Screws: Hilti KH-EZ carbon steel screw anchor complying with ICC ES Evaluation Report ESR-3027.
   D. Masonry Screws: Hilti KH-EZ carbon steel screw anchor complying with ICC ES Evaluation Report ESR-3056.
   E. Self-Drilling wood Screw: At steel to wood connections (Indicated "SDS" on drawings): Simpson SDS screw complying with ICC-ES ESR 2236. At wood to wood connections (Indicated "SDWS" on drawings): Simpson SDWS screw complying with IAPMO-UES ER 192.
   F. Lag Screw: Lag Screw complying with ANSI / ASME B18.2.1
   G. Where fasteners are exposed to weather, provide stainless steel fasteners conforming to the Evaluation Report in lieu of carbon steel.

3. Installation: See manufacturer's written instructions and referenced ICC-ES evaluation report. Contractor shall arrange an anchor manufacturer's representative to provide onsite installation training for all anchor products specified.
   A. Prior to drilling holes for post-installed anchors, contractor to locate existing rebar, prestressing tendons, post-tensioning tendons, and embedded utilities using non-hazardous, non-destructive methods with accurate location tolerances (plus or minus 1/4-inch). Do not cut, hit, or otherwise damage existing rebar or tendons during anchor installation.
   B. Drilling Holes in Existing Concrete or Masonry for Anchorages: Use non-pneumatic, rotary hammer tools with ANSI compliant non-rebar cutting drill bits to drill holes of proper tolerances. Locate existing rebar including prestressing and post-tensioning tendons using non-hazardous, non-destructive methods with accurate location tolerances (plus or minus 1/4-inch) prior to drilling holes to avoid cutting or damaging Holes shall be thoroughly cleaned per manufacturer's written recommendations prior to installation of anchorages.
   C. Deleterious Materials: Keep anchorages, including holes for drill and epoxy anchors and mechanical anchors, free of dust, grease, and other materials that impair bond.
   D. Use of diamond core bit with roughening tool for anchor holes requires approval from Engineer of Record prior to drilling. Unless otherwise shown in the drawings, all holes shall be drilled perpendicular to the concrete surface.
   E. Embedment Depths:
      a. Mechanical Anchors: Embedment depths noted in drawings are the effective minimum embedment UNO. Refer to applicable evaluation report for the corresponding minimum hole depth and nominal embedment.
      b. Screw Anchors: Embedment depths noted in drawings are the nominal minimum embedment UNO. Refer to the applicable evaluation report for the corresponding minimum hole depth.
   F. Anchor installer certification is required for all installers of drill and epoxy anchors in horizontal or upwardly inclined orientation. Installer qualification must be provided to the inspector prior to installation.
   G. Installation Torques for Expansion Anchors shall be as noted:

Nominal Anchor Diameter	Expansion Anchor Installation Torque (ft-lb)			
	Into Concrete		Into Masonry	
	KB-TZ2 Carbon Steel	KB-TZ2 Stainless Steel	KB-TZ2 Carbon Steel	KB-TZ2 Stainless Steel
1/4"	4	6	4	6
3/8"	30	30	15	15
1/2"	50	40	25	15
5/8"	40	60	30	35
3/4"	110	125	50	50

   H. Installation Torques for Screw Anchors shall be as noted:

Nominal Anchor Diameter	Screw Anchor Installation Torque (ft-lb)					
	Into Concrete			Into Masonry		
	Hilti KH-EZ Hex	Hilti KH-EZ C	Hilti KH-EZ CRC	Hilti KH-EZ E & KH-EZ I	Hilti KH-EZ (Hex, P, PM, PL & C)	Hilti KH-EZ CRC
1/4"	18		N/A	18	21	N/A
3/8"	40 (19 @ h_{nom} <2.5")		40	40	22	20
1/2"	45	N/A	45	N/A	34	25
5/8"	85	N/A	85	N/A	38	35
3/4"	95	N/A	85	N/A	70	45

   Note: 1/4" dia. Hilti KH-EZ P, PM & PL in concrete shall have installation torque of 18 ft-lb.

4. Testing
   A. See DSA 103 Testing and Inspections.
   B. Installation in Concrete:
      a. Provide testing of post-installed anchors in concrete per CBC 2022 1910A.5.
   C. Installation in Masonry:
      a. Provide testing of post-installed anchors in masonry per CBC 2022 1910A.5 as required by section 1705A.4.

STRUCTURAL STEEL

1. Provide readily identifiable structural steel in compliance with Applicable Code Section 2202A.1.

2. Structural Steel: Furnish structural steel complying with the following ASTM standard specifications, unless noted otherwise:

Use/Shape	Type/Grade	GWP Limit (unfabricated) (MT CO_2e/MT)	Notes
Wide Flanges and Channels	ASTM A992, Grade 50	1.01	
Angles	ASTM A572, Grade 50	1.01	
Plates	ASTM A572, Grade 50	1.49	
Hollow Structural Sections (rectangular and round)	ASTM A500, Grade C (50 ksi)	1.71	
Pipes:	ASTM A53, Grade B (35 ksi)		
Anchor Rods:	ASTM F1554, Grade 55		Weldable All Threaded
Headed Anchor Bolts	ASTM F1554, Grade 55		Weldable

3. Holes for Bolted Connections and Anchor Rods: AISC "standard" holes, unless noted otherwise. See Note 11, for oversized holes for anchor rods in non-frame base plates.

4. High Strength Bolts, Nuts and Washers: AISC "Specification for Structural Joints Using High-Strength Bolts."
   A. Hardened Washers: ASTM F436, under nuts except where plate washers are used. Provide beveled washers where joint face slope is greater than 1:20.
   B. Tightening: Snug tight for all high strength bolts except tighten A325-SC and A490-SC bolts to at least the minimum proper tension according to AISC Specification.
   C. Provide Class A Faying Surface or better at bolted connections indicated with "SC" type bolts.
   D. All bolts parts of "SFRS" shall be "SC" type bolts.

5. Welding:
   A. Applicable Welding Standard: Applicable Code and latest adopted edition of AWS D1.1 and D1.8.
   B. Pre-qualified and Non Pre-qualified Welds: Welds shall be pre-qualified in compliance with Applicable Welding Standard. Where non pre-qualified welds are to be used, qualify by test and procedure qualification test record complying with Applicable Welding Standard.
   C. Work performed by Welders and Inspectors: Adhere to approved Welding Procedure Specification (WPS). Each welder and inspector shall retain a copy of WPS.
   D. Pre-construction Meeting: Conduct to include Architect (Structural Engineer), fabricator, erector, Contractor and inspectors to discuss Welding Procedure Specification (WPS).
   E. Welding Procedure Specification (WPS): Fabricator/erector to develop WPS in compliance with Applicable Welding Standard. Submit to Architect (Structural Engineer) for acceptance and Governing Code Authority for approval prior to fabrication. WPS submittal to include the following:
      a. Welding manufacturers' specifications.
      b. Information required by Applicable Code, Contract Documents and any other information necessary to produce welds that are in compliance with Applicable Welding Standard.
      c. Detailed sequence of weld sketches addressing effects of welding heat for welds at joints and within seismic frame assemblies as a whole. Plan sequence of erection and welding to minimize locked in stresses and distortion considering effects of welding heat. Procedures submitted shall result in completed connections which comply with design intent of structural drawings. No deviation from structural drawings is permitted unless otherwise accepted by Architect (Structural Engineer) and approved by Governing Code Authority.
      d. Welding parameters recommended by electrode manufacturer.
      e. List of applicable base metal types and thicknesses.
      f. Welding joint sketches including joint type, weld type, joint geometry, and applicable dimensions. Individual weld passes shall be identified in sketches and numbered to identify the sequence of their deposition. Sketches shall identify the maximum layer thicknesses and bead widths. In no case shall layer thickness exceed 1/4-inch, nor shall maximum bead width exceed 5/8-inch.
      g. Applicable welding process.
      h. Position of welding.
      i. List of filler metal per Applicable Welding Standard and electrode specification and classification. Include details showing shielding material to be used.
      j. Minimum preheat requirements, interpass temperatures and post weld heat treatment. Minimum specified preheat shall meet requirements of AWS D1.1, table 3.2, and AISC 360-16 Section M2-2 requirements for jumbo sections.
      k. List of applicable electrical characteristics for process employed. Clearly indicate specific values required for each welding pass. These electrical characteristics shall include at a minimum the following:
         - Electrode diameter.
         - Type of current and acceptable ranges of current measured in amperage. For wire feed processes, indicate manufacturers' recommended melt-off rate, deposition rate, and wire feed speed.
         - Voltage (for all processes).
         - Actual field condition travel speed and manufacturer's data for travel speed.
         - Electrode extension (stick out) for wire feed processes.
         - Amperage, voltage and electrode extension (as applicable) shall be within filler metal manufacturer's recommendations (compare to AWS D1.1, Section 3.6 and 3.7).
         - Electrode manufacturer's technical information, with identification number listed, and welding parameter recommendations.
   F. Welding Electrode (Filler Metal): E70xx (70 ksi) uno, provide filler metal with Charpy V-notch toughness of 20 ft/lbs at -20 degrees Fahrenheit at complete penetration groove welds.
      a. Welds indicated as part of the "SFRS" shall comply with AISC 341 sections A3.4a and I2.3. These welded connections shall be made with a filler metal achieving a minimum Charpy V-notch toughness of 20ft/lbs at a temperature lower than 0°F.
      b. Welds indicated as "Demand Critical" (DC) shall comply with AISC 341 sections A3.4b and I2.3. These welded connections shall be made with a filler metal achieving a minimum Charpy V-notch toughness of 20ft/lbs at a temperature lower than 0°F, and a filler metal producing welds that have a minimum Charpy V-notch toughness of 40ft/lbs at temperature lower than +70°F.
   G. Welding Toughness Requirements: Certify conformance to Charpy V-notch toughness requirements with tests by an independent testing laboratory for each AWS classification, manufacturer and trade name. Testing procedures shall be in accordance to Applicable Welding Standard and AWS D1.8
   H. Fabricators: Perform shop welds by fabricators approved by LA City or AISC.
      a. Welder Qualification: Welders, regardless if Work is performed in shop or in field, shall be qualified for the Work they will be doing and shall have certifications current and acceptable to Governing Code Authority.
      b. Special inspection shall be required for all welding, as required by governing code authority.
   I. Welds Exposed to View:
      a. Faces of fillet welds exposed to view shall have as-welded surfaces that are reasonably smooth and uniform. No finishing or grinding shall be required, except where clearances or fit of other items may so necessitate.
      b. Partial and full penetration welds exposed to view shall be ground smooth and flush with finish surface of steel. Remove backup bars and weld tabs. Fill holes with weld metal or body solder and smooth by grinding or filing.
   J. Groove Preparation: Clean groove preparation thermal cuts by grinding.
   K. Termination of Welds: Terminate at joint ends in a manner that ensures sound welds. Use extension bars and run-off tabs whenever necessary.
   L. Hand-held Calibrated Amp and Volt Meters: To be used by fabricator, erector and inspectors to assure proper amperage and voltage of welding process. Measure amperage and voltage at arc. Verify travel speed and electrode stick-out in compliance with electrode manufacturer's recommendations and with approved WPS.
   M. Storage of Electrodes: Adhere to Section 5.3 of AWS D1.1.
   N. Weld each flange of moment frame beam to column connections in one continuous process without cooling below pre-heat temperature.
   O. Welding of ASTM A913 Materials: Perform according to requirements of latest edition of AWS standard, structural drawings and specifications, whichever is more stringent.
   P. Minimum Fillet Weld Size: Where minimum fillet weld size, as stipulated by AISC Section J2 and Table J2.4, exceeds fillet weld size indicated on structural drawings, use AISC stipulated size.
   Q. Minimum Groove or Butt Weld Size: Provide complete penetration unless indicated otherwise.
   R. Weld Length: Length of welds shown are net effective lengths. Where length of weld is not indicated, provide weld full length of joint.
   S. Welding at Galvanized Steel: Galvanization shall be ground off prior to welding. Repair galvanization after completion of welding.

6. Shop Drawings: Submit To Architect (Structural Engineer) for review and, upon request, to Governing Code Authority. Include sequence of erection procedures.

7. Sustainable Design Submittals: Submit type III factory-specific or product-specific environmental product declaration (EPD) for each of the following products:
   A. Hot Rolled Structural Steel
   B. Hollow Structural Steel
   C. Steel Plate

8. Fabrication: Perform in shop certified by AISC or City of Los Angeles.
   A. Moment Connections: Orient flange stiffener plates and cap plates used in moment connections so that rolling direction of plate is parallel with direction of principal stress.
   B. Horizontal Members: Place natural camber up.
   C. Filler Plates: Provide at splices of parts having more than 1/8-inch difference in thickness. Filler plates to match grade of material spliced.

9. Traceability:
   A. Material tracing is required for all steel including miscellaneous metals, connectors, and steel products manufactured by third parties. The contractor is advised that material tracing is required as directed by DSA and the project inspection team and may include any or all of the levels of traceability described below:
      a. Lot traceability: materials can be traced to the set of mill test reports (MTRs) for the project.
      b. Piece-mark traceability: heat number can be correlated to each piece mark.
      c. Piece traceability: heat number can be correlated for each piece, which requires separate piece marks for each piece, or marking of each individual piece with its heat number.
   B. Prior to placing the mill order, the contractor shall schedule a preconstruction meeting to include the AOR, SEOR, PI and inspectors responsible for inspection of the steel material fabrication and erection/installation for the purpose of reviewing material traceability requirements.
   C. The contractor shall include the cost of piece traceability in their basic services and provide deductive alternates for piece-mark and lot traceability to be provided as a credit to the Owner.

10. Cleaning: After fabrication, clean steel surfaces free of rust, loose mill scale, and oil.

11. Oversized Holes for Anchor Rods in Non-Frame Column Base Plates: Oversized holes in base plate may be provided at contractor's option in accordance with AISC Table 14-2 UNO. Where oversized holes are provided, provide plate washer with standard hole with minimum size per AISC Table 14-2 (3/8" thick min) UNO.

12. Exposure to Soil: Encase structural steel in lean concrete with 4-inches concrete cover where exposed to soil.

13. Exposure to Weather: UNO, structural steel (including connection elements) exposed to weather shall be hot dipped galvanized. At welding on galvanized members, galvanization shall be ground off prior to welding. Repair galvanization after completion of welding.

14. Structural Steel Allowance: In addition to the steel shown or implied in this document, allow for an additional 2 tons of structural steel to be constructed at the direction of the Structural Engineer during construction. The allowed steel may be of any shape or sizes, including plates, wide flanges, tubes, pipes, channels, angles, and/or any other structural shapes. The number of pieces may vary. The locations of applications may vary. Direction may be given in multiple occasions during construction. The allowance should include all fabrication and construction related services, such as shop drawings, shop preparation, field erection and coordination, bolted connections and field welding. Expenditure of any part of this allowance shall be approved in writing by the Structural Engineer prior to any fabrication and erection.

15. Heavy Sections
    A. Heavy sections shall comply with AISC 360-16 Section A3.1c.
    B. Heavy sections forming part of the "SFRS" shall also comply with AISC 341-16 Section A3.3.
    C. Welded Splices including welds to baseplates shall comply with AISC 360-16 Section J1.5.

16. See General Notes, Quality Assurance section, Notes 3 and 4 for non-destructive testing.

17. SFRS denotes items considered part of the "SEISMIC FORCE RESISTING SYSTEM" (Refer to AISC 341-16 and AWS D1.8).

18. DC denotes welds considered "DEMAND CRITICAL" per AISC 341-16 Section A3.4B and I2.3.

19. Field weld flag symbols indicate design intent but are not requirements. Whether a weld is to be made in shop or field is means and methods and to be coordinated by contractor.

20. Where bent plates specified cannot be bent due to thickness provide two plate pieces joined with a complete penetration weld.

		CONTINUOUS LONGITUDINAL BARS	TRANSVERSE BARS
CF72*	72"x18"	(5) #5 T&B	#5 @ 12"O/C T&B

* PROVIDE 8" WIDE x 12" DEEP SHEAR KEY CENTERED AT THE BOTTOM OF CF72 AS SHOWN IN DETAIL 17/2-S6.02.

SPREAD FOOTING SCHEDULE

FOOTING MARK	FOOTING SIZE		FOOTING REINFORCING (PROVIDE HOOKS AT ENDS)
	WIDTH x LENGTH	THICKNESS	
F2.5	2'-6" SQUARE	18"	(3) #7 BOT EA WAY
F3	3'-0" SQUARE	18"	(3) #7 BOT EA WAY
F3.5	3'-6" SQUARE	18"	(3) #7 BOT EA WAY
F4	4'-0" SQUARE	18"	(4) #7 BOT EA WAY

NOTES:
1. TERMINATE ALL FOOTINGS LONGITUDINAL REINF. BARS W/ STANDARD 90° BENDS AT ENDS, UNLESS NOTED OTHERWISE.
2. ALL COMBINED AND SPREAD FOOTINGS ARE TO BE FOUNDED ON APPROVED COMPACTED FILL AS PER THE GEOTECHNICAL REPORT.
3. REFER TO DETAIL 01/2-S6.02 FOR COMBINED FOOTING BAR LAYOUT, SPLICE LOCATION, AND DOWELS TO SLAB.

PLAN NOTES

1. FOR GENERAL NOTES SEE 2-S0 SERIES SHEETS. FOR TYPICAL DETAILS SEE 2-S6 SERIES SHEETS.
2. SEE ARCHITECTURAL, MECHANICAL, ELECTRICAL, and PLUMBING DRAWINGS FOR TOP OF CONCRETE SLAB ON GRADE ELEVATIONS, DEPRESSIONS, SLOPES, OPENINGS, DRAINS, TRENCHES, PADS, and CURBS; SLAB EDGE LOCATIONS; WALL OVERALL DIMENSIONS; and LOCATIONS OF OPENINGS NOT INDICATED ON STRUCTURAL DRAWINGS.
3. BUILDING SLAB-ON-GRADE: 5" THICK W/ #4 @ 18" O/C EACH WAY at CENTER OF SLAB OVER 15 MIL STEGO WRAP VAPOR BARRIER OR APPROVED EQ (LAP 6" AT JOINTS and TAPE SEAL - OMIT VAPOR BARRIER AT EXTERIOR AREAS) OVER AT LEAST 2 FEET OF NON EXPANSIVE (EI<20) AND PROPERLY COMPACTED FILL AS INDICATED IN THE GEOTECHNICAL REPORT. PROVIDE CONSTRUCTION JOINTS OR WEAKENED PLANE JOINTS IN SLAB-ON-GRADE EACH DIRECTION PER DETAIL 06/2-S6.01 - AT AREAS TO RECEIVE TILE, COORDINATE LOCATION OF JOINTS IN SLAB TO ALIGN WITH TILE EXPANSION JOINTS PER ARCH.
4. CENTER COLUMNS ON NUMBERED GRID LINES UNLESS NOTED OTHERWISE. CENTER SPREAD FOOTINGS, and COMBINED FOOTINGS ON COLUMNS UNLESS NOTED OTHERWISE.
5. IN NO CASE SHALL PIPES, CONDUITS, OR SLEEVES BE EMBEDDED IN SPREAD OR CONTINUOUS FOOTINGS OR WITHIN TOP OR BOTTOM THIRD OF GRADE BEAMS UNLESS SPECIFICALLY DETAILED ON STRUCTURAL DRAWINGS. PIPES, CONDUITS OR SLEEVES MAY ONLY BE EMBEDDED WITHIN THE MIDDLE THIRD OF GRADE BEAMS WHERE NOTED ON STRUCTURAL PLANS AND DETAILED IN THE STRUCTURAL DRAWINGS.
6. WHERE CONTINUOUS FOOTINGS and SPREAD FOOTINGS INTERSECT, EXCAVATE TO BOTTOM OF DEEPER FOOTING and CONTINUE ALL BARS THRU INTERSECTION. PLACE BARS AT CONTINUOUS FOOTING CORNERS and INTERSECTIONS PER 05/2-S6.01. WHERE CONTINUOUS FOOTINGS TERMINATE AT SIDES OF GRADE BEAMS OR SPREAD FOOTINGS, EXTEND LONGITUDINAL BARS TO FAR SIDE OF GRADE BEAM OR SPREAD FOOTING and TERMINATE W/ STANDARD 90° HOOK.
7. LOCATE TOP OF SPREAD FOOTINGS, COMBINED FOOTINGS, and CONTINUOUS FOOTINGS 1'-6" BELOW LOWEST ADJACENT SLAB OR GRADE ELEVATION UNLESS NOTED OTHERWISE.
8. GEOTECHNICAL OBSERVATION / COMPACTION REPORT SHALL BE SUBMITTED TO THE BUILDING INSPECTOR PRIOR TO FOOTING INSPECTION.
9. COORDINATE EXTENT OF CONCRETE PADS SUPPORTING EQUIPMENT WITH MANUFACTURER AND WITH EDGE DISTANCE REQUIREMENTS PER EQUIPMENT ANCHORAGE DETAILS IN 2-S6.9X SERIES.
10. CONSTRUCT LIGHT GUAGE METAL STUD WALLS PER 01/2-S6.71A AT EXTERIOR CONDITION AND 01/2-S6.71B AT INTERIOR CONDITION UNLESS NOTED OTHERWISE ON PLANS OR 2-S1-4.X SHEET SERIES.
11. SEE CIVIL DRAWINGS FOR APPROXIMATE LOCATION OF EXISTING UNDERGROUND UTILITIES. PROTECT OR RELOCATE EXISTING UTILITIES AS REQUIRED DURING FOOTING EXCAVATION OR CONSTRUCTION. DO NOT SURCHARGE EXISTING UTILITIES, SEE 01/2-S6.01 FOR ADDITIONAL CLARIFICATION.

BRACE FRAME ELEVATION NOTES

1. FOR GENERAL NOTES SEE 2-S0 SERIES SHEETS. FOR TYPICAL DETAILS SEE 2-S6 SERIES SHEETS.
2. BRBF CONNECTIONS AND LENGTHS SHOWN IN ELEVATIONS ARE FOR REFERENCE ONLY. COORDINATE SPECIFICS OF BRACE AND CONNECTION DETAILING / GEOMETRY WITH INFORMATION SHOWN WITHIN COREBRACE SCHEDULE AND DETAILING IN 2-S3.1X, 2-S3.2X and 2-S6 SERIES DETAILS.
3. CB-X.XX INDICATES BUCKLING RESTRAINED BRACE FRAME. SEE 2-S3.2X SHEET SERIES FOR ALL REQUIREMENTS.
4. THE FOLLOWING WELDS ARE CLASSIFIED AS DEMAND CRITICAL (SEE WELDING REQUIREMENTS UNDER THE STRUCTURAL STEEL SECTION OF THE GENERAL NOTES)
   A. GROOVE WELDS AT COLUMN SPLICES.
   B. WELDS AT COLUMN to BASE PLATE CONNECTIONS.
   C. WELDS at BEAM TO COLUMN CONNECTIONS.
5. PROVIDE ROUND PIPE CASING TYPICAL WITH BOLTED CONNECTION EA END TYPICAL UNO.
   A. BRBF-1 and -7 ARE TO BE PROVIDED WITH PINNED CONNECTION EA END.
6. BRBF-1 and -7 ARE EXPOSED.
7. SEE 2-S3.11 FOR BRBF BASE PLATE DETAIL AND SCHEDULE.
8. FOR COLUMN ORIENTATION SEE PLANS.
9. ADD ANGLES AT COLUMN FOR SUPPORT OF METAL DECKING PER 15/2-S6.12 UNLESS NOTED OTHERWISE.
10. NO PENETRATION IN STRUCTURAL STEEL IS PERMITTED UNLESS SPECIFICALLY SHOWN ON STRUCTURAL DRAWINGS.
11. SEE DETAIL 4/2-S3.23 FOR EXPANDED POLYSTYRENE REQUIREMENT AROUND BRB CASING BURIED IN CONCRETE.

BRACE FRAME ELEVATION LEGEND

CB-X.XX	INDICATES BUCKLING RESTRAINED BRACED FRAME. SEE 2-S3.2X FOR ALL REQUIREMENTS.
NF	INDICATES NON-FRAME FRAMING MEMBER - SEE PLANS FOR MEMBER SIZE AND CONNECTION DETAILS.

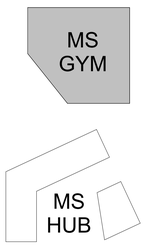
SITE DETAILS

2-S1.11

TRUE NORTH PROJECT NORTH



MECH ENCLOSURE - FOUNDATION PLAN | 1/4" = 1'-0" | 2-S2-1.01 | 05

PLAN NOTES

1. FOR GENERAL NOTES SEE 2-S0 SERIES SHEETS. FOR TYPICAL DETAILS SEE 2-S6 SERIES SHEETS.
2. SEE LANDSCAPE, MECHANICAL, ELECTRICAL, and PLUMBING DRAWINGS FOR TOP OF CONCRETE SLAB ON GRADE ELEVATIONS, DEPRESSIONS, SLOPES, OPENINGS, DRAINS, TRENCHES, PADS, and CURBS; SLAB EDGE LOCATIONS; WALL OVERALL DIMENSIONS; and LOCATIONS OF OPENINGS NOT INDICATED ON STRUCTURAL DRAWINGS.
3. SITE SLAB-ON-GRADE: 6" THICK W/ #4 @ 18" O/C EACH WAY at CENTER OF SLAB OVER 15 MIL STEGO WRAP VAPOR BARRIER OR APPROVED EQ (LAP 6" AT JOINTS and TAPE SEAL - OMIT VAPOR BARRIER AT EXTERIOR AREAS) OVER AT LEAST 2 FEET OF NON EXPANSIVE (EI<20) AND PROPERLY COMPACTED FILL AS INDICATED IN THE GEOTECHNICAL REPORT. PROVIDE CONSTRUCTION JOINTS OR WEAKENED PLANE JOINTS IN SLAB-ON-GRADE EACH DIRECTION PER DETAIL 06/2-S6.01 - AT AREAS TO RECEIVE TILE, COORDINATE LOCATION OF JOINTS IN SLAB TO ALIGN WITH TILE EXPANSION JOINTS PER ARCH.
4. CENTER WALLS ON CONTINOUS FOOTING UNLESS NOTED OTHERWISE.
5. IN NO CASE SHALL PIPES, CONDUITS, OR SLEEVES BE EMBEDDED IN SPREAD OR CONTINUOUS FOOTINGS OR WITHIN TOP OR BOTTOM THIRD OF GRADE BEAMS UNLESS SPECIFICALLY DETAILED ON STRUCTURAL DRAWINGS. PIPES, CONDUITS OR SLEEVES MAY ONLY BE EMBEDDED WITHIN THE MIDDLE THIRD OF GRADE BEAMS WHERE NOTED ON STRUCTURAL PLANS AND DETAILED IN THE STRUCTURAL DRAWINGS.
6. WHERE CONTINUOUS FOOTINGS and SPREAD FOOTINGS INTERSECT, EXCAVATE TO BOTTOM OF DEEPER FOOTING and CONTINUE ALL BARS THRU INTERSECTION. PLACE BARS AT CONTINUOUS FOOTING CORNERS and INTERSECTIONS PER 05/S6.01. WHERE CONTINUOUS FOOTINGS TERMINATE AT SIDES OF GRADE BEAMS OR SPREAD FOOTINGS, EXTEND LONGITUDINAL BARS TO FAR SIDE OF GRADE BEAM OR SPREAD FOOTING and TERMINATE W/ STANDARD 90° HOOK.
7. LOCATE TOP OF SPREAD FOOTINGS, COMBINED FOOTINGS, and CONTINUOUS FOOTINGS 1'-4" BELOW LOWEST ADJACENT SLAB OR GRADE ELEVATION UNLESS NOTED OTHERWISE.
8. GEOTECHNICAL OBSERVATION / COMPACTION REPORT SHALL BE SUBMITTED TO THE BUILDING INSPECTOR PRIOR TO FOOTING INSPECTION.
9. COORDINATE EXTENT OF CONCRETE PADS SUPPORTING EQUIPMENT WITH MANUFACTURER AND WITH EDGE DISTANCE REQUIREMENTS PER EQUIPMENT ANCHORAGE DETAILS IN 2-S6.9X SERIES.
10. CONSTRUCT LIGHT GUAGE METAL STUD WALLS PER 01/S6.71A AT EXTERIOR CONDITION AND 01/2-S6.71B AT INTERIOR CONDITION UNLESS NOTED OTHERWISE.
11. SEE CIVIL DRAWINGS FOR APPROXIMATE LOCATION OF EXISTING UNDERGROUND UTILITIES. PROTECT OR RELOCATE EXISTING UTILITIES AS REQUIRED DURING FOOTING EXCAVATION OR CONSTRUCTION. DO NOT SURCHARGE EXISTING UTILITIES, SEE 01/2-S6.01 FOR ADDITIONAL CLARIFICATION.

LEGEND

BRACE FRAME ELEVATION NOTES

1. FOR GENERAL NOTES SEE S0 SERIES SHEETS. FOR TYPICAL DETAILS SEE S6 SERIES SHEETS.
2. BRBF CONNECTIONS AND LENGTHS SHOWN IN ELEVATIONS ARE FOR REFERENCE ONLY. COORDINATE SPECIFICS OF BRACE AND CONNECTION DETAILING / GEOMETRY WITH INFORMATION SHOWN WITHIN COREBRACE SCHEDULE AND DETAILING IN S3.1X, S3.2X and S6 SERIES DETAILS.
3. CB-X.XX INDICATES BUCKLING RESTRAINED BRACE FRAME. SEE S3.2X SHEET SERIES FOR ALL REQUIREMENTS.
4. THE FOLLOWING WELDS ARE CLASSIFIED AS DEMAND CRITICAL (SEE WELDING REQUIREMENTS UNDER THE STRUCTURAL STEEL SECTION OF THE GENERAL NOTES)
   A. GROOVE WELDS AT COLUMN SPLICES.
   B. WELDS AT COLUMN to BASE PLATE CONNECTIONS.
   C. WELDS at BEAM TO COLUMN CONNECTIONS.
5. PROVIDE ROUND PIPE CASING TYPICAL WITH BOLTED CONNECTION EA END TYPICAL UNO:
   A. BRBF-2, -3, -4, -5, -6, and -7 ARE TO BE PROVIDED WITH PINNED CONNECTION EA END AT THE SECOND STORY ONLY.
   B. AT BRBF -7 and -8 PROVIDE 10IN SQUARE CASING FOR THE BRACE AT THE FIRST FLOOR ONLY.
6. BRBF-2, -3, -4, -5, -6, and -7 ARE EXPOSED AT THE SECOND STORY ONLY.
7. SEE S3.11 FOR BRBF BASE PLATE DETAIL AND SCHEDULE.
8. FOR COLUMN ORIENTATION SEE PLANS.
9. ADD ANGLES AT COLUMN FOR SUPPORT OF METAL DECKING PER 15/2-S6.12 UNLESS NOTED OTHERWISE.
10. NO PENETRATION IN STRUCTURAL STEEL IS PERMITTED UNLESS SPECIFICALLY SHOWN ON STRUCTURAL DRAWINGS.
11. SEE DETAIL 4/2-S3.23 FOR EXPANDED POLYSTYRENE REQUIREMENT AROUND BRB CASING BURIED IN CONCRETE.

BRACE FRAME ELEVATION LEGEND

CB-X.XX	INDICATES BUCKLING RESTRAINED BRACED FRAME. SEE 2-S3.2X FOR ALL REQUIREMENTS.
NF	INDICATES NON-FRAME FRAMING MEMBER - SEE PLANS FOR MEMBER SIZE AND CONNECTION DETAILS.

CONDITIONS AT FRAME BEAM TO COLUMN MAJOR AXIS

NOTES:
1. AT BOTTOM FLANGE CONNECTION: AFTER FULL PENETRATION WELDING, REMOVE BACKING BAR. WELD ROOT SHALL BE INSPECTED AND TESTED FOR IMPERFECTIONS, WHICH IF FOUND, ARE TO BE REMOVED BY BACKGOUGING TO SOUND MATERIAL and CLEANED BY GRINDING IF BACKGOUGED BY AIR ARC. BACKGOUGED AREA IS TO BE RE-WELDED TO FLUSH CONDITION. WHERE BEAM CONNECTION OCCURS AT COLUMN FLANGE APPLY FILLET WELD TO REINFORCE JOINT. SIZE OF REINFORCING FILLET WELD SHALL BE IN ACCORDANCE WITH AWS D1.8, BUT NOT LESS THAN 5/16".
2. AT TOP FLANGE CONNECTION: AFTER FULL PENETRATION WELDING, BACKING BAR CAN REMAIN IN PLACE. WHERE BEAM CONNECTION OCCURS AT COLUMN FLANGE APPLY FILLET WELD BETWEEN COLUMN FLANGE AND BACKUP BAR TO REINFORCE JOINT. SIZE OF FILLET WELD SHALL BE IN ACCORDANCE WITH AWS D1.8, BUT NOT LESS THAN 5/16". AT CONTRACTORS OPTION BACKING BAR CAN BE REMOVED AND PROCEDURE DESCRIBED FOR BOTTOM FLANGE CAN BE FOLLOWED AT TOP FLANGE.
3. PERFORM BEAM WEB WELDING AFTER ALL FLANGE WELDING IS COMPLETE.
4. ALL WELDING SHALL BE IN CONFORMANCE W/ AWS 1.1 and AWS 1.8.
5. FOR PREHEAT and POSTHEAT REQUIREMENTS SEE AWS D1.8
6. BRACES, BRACE CONNECTIONS, AND GUSSET PLATES OMITTED FOR CLARITY.
7. REMOVE ALL WELD TABS AT BOTH TOP FLANGE AND BOTTOM FLANGE CONNECTION.
8. PROVIDE CONTINUITY AND STIFFENER PLATES AS SHOWN (ON EACH SIDE OF COLUMN WEB) AT ONE SIDED / END CONDITIONS UNO

WHERE BEAM DEPTHS VARY <= 4", PROVIDE SLOPING CONTINUITY PLATE MATCHING THICKER BEAM FLANGE

CoreBrace
20 ANNIVERSARY 2002 - 2022
SUPERIOR SEISMIC PERFORMANCE
5789 W. Wells Park Rd.
West Jordan, Utah 84081
(801) 280-0701

© 2025 CoreBrace™, LLC This drawing is proprietary to CoreBrace™, LLC. Not to be duplicated or used without the express written consent of CoreBrace™, LLC. Moreover, CoreBrace™, LLC is not responsible for the use of this drawing by others without its knowledge and consent.

CoreBrace Engineering Design Responsibilities are limited to the following:
- Complete BRB design based on A_{sc} provided by E.O.R.
- Design connection of BRB to gusset.
- Design gusset connection to frame columns, beams and base plates.

General Notes:
1. See "Casing Buried in Concrete Detail" where concrete slab will interfere with required BRB stroke.
2. Structural steel detailer and erection team to consider erectability constraints when determining piece erection sequencing and field welding versus shop welding of stiffeners and gussets.
3. Detail callouts are typical at the given frame location, UNO. See "CB" sheets for typical details.
4. Single-line diagrams do not necessarily represent WP axis of members, see details.
5. Member sizes, dimensions, elevations, and work point locations on CB sheets are shown for coordination only. Project documents shall govern. Verify in field as necessary.
6. See project documents for additional information; more stringent requirements on project documents shall govern.

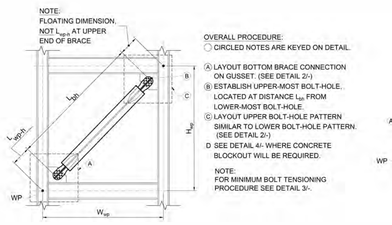
© 2025 CoreBrace™, LLC This drawing is proprietary to CoreBrace™, LLC. Not to be duplicated or used without the express written consent of CoreBrace™, LLC. Moreover, CoreBrace™, LLC is not responsible for the use of this drawing by others without its knowledge and consent.

CoreBrace Engineering Design Responsibilities are limited to the following:
- Complete BRB design based on A_{sc} provided by E.O.R.
- Design connection of BRB to gusset.
- Design gusset connection to frame columns, beams and base plates.



General Notes:
1. See "Casing Buried in Concrete Detail" where concrete slab will interfere with required BRB stroke.
2. Structural steel detailer and erection team to consider erectability constraints when determining piece erection sequencing and field welding versus shop welding of stiffeners and gussets.
3. Detail callouts are typical at the given frame location, UNO. See "CB" sheets for typical details.
4. Single-line diagrams do not necessarily represent WP axis of members, see details.
5. Member sizes, dimensions, elevations, and work point locations on CB sheets are shown for coordination only. Project documents shall govern. Verify in field as necessary.
6. See project documents for additional information; more stringent requirements on project documents shall govern.

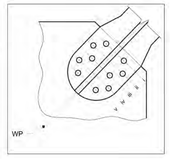
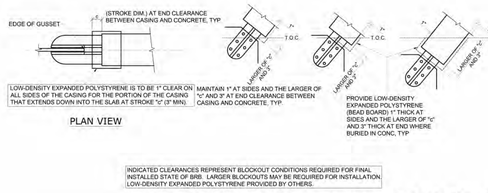
BOLTED GUSSET OVERALL LAYOUT PROCEDURE 1
SCALE: NTS



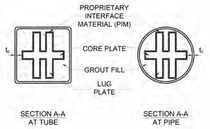
BOLTED GUSSET LAYOUT PROCEDURE 2
SCALE: NTS

BOLT TENSIONING PROCEDURE
Bolts shall be torqued to achieve the appropriate bolt tension as set forth in the erector's approved procedures. As a minimum, the following items shall be adhered to:



A. Starting with the most rigid part of the connection (Row 'I') and continuing to the least rigid part of the connection (Row 'A'), bring all bolts to snug-tight condition.
B. Recheck snug-tight condition of bolts in rows 'I' and 'H', re-tighten as necessary.
C. Torque bolts in Row 'I' to appropriate level of tension using approved procedure.
D. Re-check snug tight condition of bolt in row 'H'.
E. Torque bolts in Row 'H' to appropriate level using approved procedure.
F. Continue alternating check of snug tight condition of next-to-nearest row and torquing nearest row of untorged bolts as set forth in steps D & E until end of brace is reached and all bolts are at appropriate level of torque.
G. Repeat similar procedure at top end of brace.

GENERAL NOTES:
ALL BOLTED BRACE CONNECTIONS SHALL BE INSTALLED IN ACCORDANCE WITH THE ERECTOR'S APPROVED QUALITY ASSURANCE PLAN. AS A MINIMUM, THE FOLLOWING MUST BE MET:



- Tighten all slip-critical bolts and bolts installed at oversized holes by a method approved by the engineer of record. Provide hardened washers under all turned elements.
- Where ASTM F3125 Gr A490-SC/F2280-TC or stronger bolts are specified in the drawings, provide hardened washer between nut & gusset. Where required by AISC Specifications, provide washer between bolt head & gusset.
- Bolts must be long enough for the threads to be flush with the outside face of the nut after tightening. Thread stickout shall not exceed that allowed by structural drawings.
- Do not reuse bolts, nuts, or washers.
- TC bolts must be in the as-delivered, clean and lubricated condition when torqued, per RCSC requirements. If left installed on the brace but in an untorqued and exposed condition for any period of time, a pre-installation verification must be performed or the bolts must be replaced.

NOTE: BOLT HOLES IN CONNECTION LUGS ARE STANDARD HOLES.

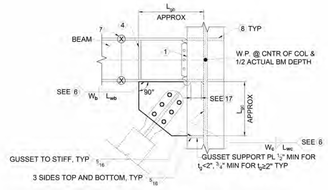
GENERAL NOTES:
G1. SEE PROJECT DRAWINGS FOR ADDITIONAL INFORMATION
G2. DIMENSIONS AND WP LOCATIONS FROM PROJECT DRAWINGS GOVERN. CONTACT COREBRACE PRIOR TO DETAILING IF ANY DISCREPANCIES ARE NOTED.
G3. CORE PL A36 SPECIAL (FY RANGE PROVIDED ON COREBRACE SCHEDULE)
G4. CASING A500 GR B FOR HSS AND A53 GR B FOR PIPE
G5. BRB LUG PLATE (TRANSVERSE STIFFENER) A572 GR 50
G6. GUSSET PL, GUSSET STIFFENER AND REPAD PL A572 GR 50 U.N.O.
G7. ALL STIFFENERS AND DOUBLER PL TO MATCH BEAM AND COLUMN GRADE.
G8. USE ASTM F3125 GR A490-SC/F2280-TC OR ASTM F3148 TNA BOLTS. BOLT HOLES IN GUSSET ARE OVERSIZED. BOLT HOLES IN BRB ARE STANDARD. ***(BOLTS AND WASHERS PROVIDED BY OTHERS)***
G9. CLASS A (TOOL CLEAN) ALL FAYING SURFACES.
G10. GALVANIZED FAYING SURFACES TO BE HAND WIRE BRUSHED PRIOR TO ERECTION OF BRB.
G11. THE GAP BETWEEN THE BOLTED CONNECTION PLATES AT THE END OF THE BRB SHALL NOT BE INCREASED EXCEPT IN INSTANCES WHERE SPECIFIC APPROVAL AND METHODOLOGY HAVE BEEN PROVIDED BY COREBRACE.

CONNECTION NOTES:
CIRCLED NOTES ARE KEYED ON CONNECTION DETAILS.



1. SEE STRUCTURAL DRAWINGS FOR BM-TO-COL & COL-TO-B.P. CONNECTION, TYP.
2. SEE CONNECTION SCHEDULE FOR CONNECTION DIMENSIONS.
3. SEE COREBRACE SCHEDULE FOR BRB GEOMETRY DIMENSIONS.
4. MAIN STIFF PL EA SIDE AS REQ'D BY STRUCTURAL DRAWINGS OR AS INDICATED ON CONNECTION SCHEDULE. SEE DETAIL 11.
5. FIELD INSTALL STIFF PL AS NECESSARY FOR INSTALLATION OF BRACE.
6. WELD BOTH SIDES. WHERE AVAILABLE WELD LENGTH IS LONGER THAN REQ'D WELD LENGTH, PROVIDE WELD ALONG ENTIRE LENGTH TO WITHIN ¾" OF EDGE OF PL.
7. TOP AND BOTTOM FLANGE LATERAL BRACING AS REQUIRED BY STRUCTURAL DRAWINGS.
8. CONTINUITY PLATE WHERE REQ'D BY STRUCTURAL DRAWINGS. AT WEAK-AXIS COLUMN, ALWAYS PROVIDE CONTINUITY PLATE T&B AND N&FS. SEE DETAIL 11.
9. PROVIDE W_{lw} WELD IN "Z" REGION. IT IS ACCEPTABLE TO EXTEND THIS WELD OVER THE ENTIRE LENGTH OF THE GUSSET PLATE. ALTERNATIVELY, PROVIDE CJP GUSSET-TO-BEAM WELD. WHERE W_{lw} IS NOT REQ'D, USE W_b.

9 THROUGH 16 NOT USED

17. IF EFFECTIVE WELD LENGTH IS LESS THAN 4*W_{lw}, WELD SHALL STILL BE APPLIED IN THIS REGION. HOWEVER, LENGTH BETWEEN RATHOLE & COLUMN WEB SHALL NOT BE COUNTED TOWARD REQUIRED WELD LENGTH (L_{wb}).

COREBRACE BOLTED BRACE and GUSSET CONNECTION DETAILS

2-S3.23

OVERALL PROCEDURE:

(A) LAY OUT LOWER BRACE CONNECTION ON GUSSET. (SEE DETAIL 2/-)

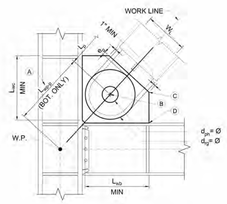
(B) ESTABLISH UPPER PIN-HOLE CENTER LOCATED AT DISTANCE L_p FROM LOWER PIN-HOLE CENTER.

(C) LAY OUT UPPER BRACE CONNECTION ON GUSSET STARTING AT PIN HOLE CENTER SIMILAR TO BOTTOM.

D SEE DETAIL 4/- WHERE CONCRETE BLOCKOUT WILL BE REQUIRED.

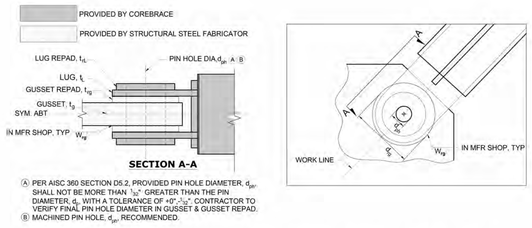
NOTE:
IT IS RECOMMENDED TO FIELD INSTALL AT LEAST ONE GUSSET PER BRB DUE TO EXTREMLY TIGHT TOLERANCES REQUIRED FOR PINNED CONNECTIONS IN AISC 360.

PINNED GUSSET OVERALL LAYOUT PROCEDURE 1
SCALE: NTS



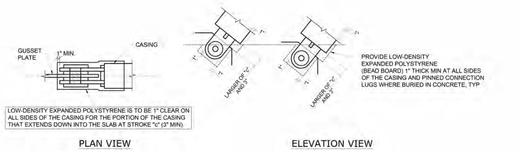
GUSSET LAYOUT PROCEDURE:

(A) ESTABLISH LOCATION OF PIN HOLE CENTERLINE ALONG WORK LINE.



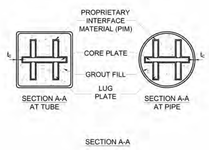
(B) LAY OUT PIN HOLE AND GUSSET REPAD AS SHOWN. (SEE DETAIL 3/-)

(C) LOCATE FREE EDGE OF GUSSET USING $\frac{1}{2}d_g + e_g$. GUSSET EDGE WIDTH IS d_g + 2 x MIN RETURN AND PERPENDICULAR TO WORK LINE.

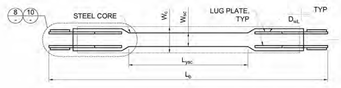


(D) RETURN TO BEAM AND/OR COLUMN AND VERIFY MIN WELD LENGTH (INCLUDING DEDUCTIONS FOR CLIP AND WELD START/STOP) IS MAINTAINED.

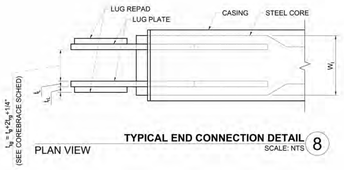
PINNED GUSSET LAYOUT PROCEDURE 2
SCALE: NTS



GUSSET PIN HOLE & REPAD - TYPICAL DETAIL 3
SCALE: NTS



INDICATED CLEARANCES REPRESENT BLOCKOUT CONDITIONS REQUIRED FOR FINAL INSTALLED STATE OF BRB. LARGER BLOCKOUTS MAY BE REQUIRED FOR INSTALLATION. LOW DENSITY EXPANDED POLYSTYRENE PROVIDED BY OTHERS.



ALL BLOCK-OUTS AT PINNED CONNECTIONS MUST BE APPROVED BY COREBRACE AND STRUCTURAL ENGINEER OF RECORD.

G7 ALL STIFFENERS AND DOUBLER PL TO MATCH BEAM AND COLUMN GRADE.

G8 PIN HOLE TOLERANCE PER AISC 360 SECTION D5.2

CONNECTION NOTES:

○ CIRCLED NOTES ARE KEYED ON CONNECTION DETAILS.

1 SEE STRUCTURAL DRAWINGS FOR BM-TO-COL & COL-TO-B.P. CONNECTION, TYP.

2 SEE CONNECTION SCHEDULE FOR CONNECTION DIMENSIONS.

3 SEE COREBRACE SCHEDULE FOR BRB GEOMETRY DIMENSIONS.

4 MAIN STIFF PL EA SIDE AS REQ'D BY STRUCTURAL DRAWINGS OR AS INDICATED ON CONNECTION SCHEDULE. SEE DETAIL 11.

5 FIELD INSTALL STIFF PL AS NECESSARY FOR INSTALLATION OF BRACE.

6 WELD BOTH SIDES. WHERE AVAILABLE WELD LENGTH IS LONGER THAN REQ'D WELD LENGTH, PROVIDE WELD ALONG ENTIRE LENGTH TO WITHIN $\frac{3}{4}$" OF EDGE OF PL.

7 TOP AND BOTTOM FLANGE LATERAL BRACING AS REQUIRED BY STRUCTURAL DRAWINGS.

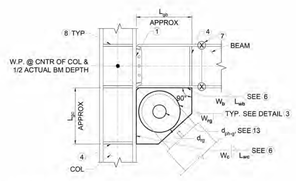
8 CONTINUITY PLATE WHERE REQ'D BY STRUCTURAL DRAWINGS. AT WEAK-AXIS COLUMN, ALWAYS PROVIDE CONTINUITY PLATE T&B AND N&FS. SEE DETAIL 11.

9 THROUGH 12 NOT USED

13 PER AISC 360 SECTION D5.2, THE DIAMETER OF THE PIN HOLE SHALL NOT BE MORE THAN $\frac{1}{32}$" GREATER THAN THE DIAMETER OF THE PIN. MACHINED HOLE RECOMMENDED.

14 FIELD INSTALL AT LEAST ONE GUSSET AS NECESSARY FOR BRACE INSTALLATION.

15 THROUGH 16 NOT USED



17 IF EFFECTIVE WELD LENGTH IS LESS THAN 4"W_{lp} WELD SHALL STILL BE APPLIED IN THIS REGION. HOWEVER, LENGTH BETWEEN RATHOLE & COLUMN WEB SHALL NOT BE COUNTED TOWARD REQUIRED WELD LENGTH (L_{wb}).

Table of Symbols

- L_b = Length of CB tip to tip
- L_p = Distance center to center of pins
- $d_{ph-g,R,L}$ = Diameter of pin hole in Gusset, Left, and Right Lugs
- L_c = Length of casing
- **Casing** = Size & type of casing
- **Type** = t = tube (square/rect) and p = pipe (round)
- W_L = Width of lug
- X_L = Length from start of lug transition to end of lug transition
- t_L = Thickness of lug
- d_{rL} = Diameter of repad at lug
- t_{rL} = Thickness of repad at lug
- D_{wrL} = Size of weld at lug repad to lug # 1/16ths
- D_{wL} = Size of weld at lug to core # 1/16ths
- e_L = Distance from edge of lug repad to edge of gusset
- **c** = Core extension length out of casing
- **a** = Gap between core and gusset
- L_{ysc} = Length of yielding core w/out allowance for Cntr Stiffener
- L''_{ysc} = Yield length of core - Yielding Portion Only
- W_{sc} = Width of core at yield section
- t_{sc} = Thickness of core
- A_{sc} = Cross sectional area of core at yield section
- **PL** = Type of core, (-) = flat, (+) = cruciform
- K_{eff} = Effective Stiffness of BRB from WP to WP
- K_f = Axial Stiffness Adjustment Factor
- P_{ysc} = Yield force of CB
- F_{ysc} = Specified yield stress range of core plate

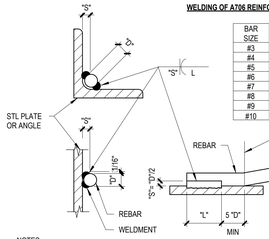
VERTICAL BAR **HORIZONTAL BAR**

NOTES:
1. AS AN ALT TO LAP SPLICE, BUTT WELD MAY BE USED AS INDICATED ABOVE, PROVIDED THEY ARE STAGGERED @ 24" MIN
2. AN APPROVED TESTING LABORATORY SHALL PROVIDE A PREQUALIFICATION TENSION TEST FOR SAMPLES ON EVERY SIZE OF BAR BEING WELDED.
3. MATERIALS, CONDITIONS AND WELDING PROCEDURES UTILIZED SHALL COMPLY WITH THE CURRENT APPLICABLE BUILDING CODE AND THE REQ'D OF THE GOVERNING INSPECTION AGENCY.
4. GENERAL CONTRACTOR IS RESPONSIBLE FOR ALL COSTS INCURRED IN OBTAINING APPROVAL.

TYPICAL REINFORCING BUTT WELDS DETAIL (ALTERNATE TO SPLICES)



N.T.S. 18

NOTES FOR DOWEL WELDS TO PLATE:
1. WELDING OF A615 REINF NOT ALLOWED, MUST USE ASTM A706 REINFORCING.
2. USE E80 ELECTRODES FOR GRADE 60, E110 ELECTRODES FOR GRADE 80.
3. ALL WELDING TO BE PER AWS D1.4
4. PREHEAT PER AWS D1.4 TABLE 5.2
5. CUT OR GRIND END OF BAR TO FIT FLUSH WITH SURFACE OF PLATE AND NOT LEAVE GAPS.
6. MINIMUM PLATE THICKNESS TO BE 0.3 TIMES DOWEL DIAMETER. INCREASE PLATE SIZE WHERE NECESSARY.

TYP. CMU WALL ELEVATION and DETAILS

2-S6.61

CAST-IN-PLACE CONCRETE

1. Concrete mixing shall comply with ASTM C94.
2. Hydraulic Cement:
   A. ASTM C595 see table for types.
   B. Alternatively, ASTM C150 type II/V.
3. Aggregates:
   A. Normal Weight Concrete Aggregate (NW): ASTM C33 for aggregates of natural sand and rock. The maximum aggregate size is noted in the table below. The maximum dry density shall be 145 pcf.
      a. Where smaller aggregate is required for workability or areas of congestion, the contractor shall submit a request to the structural engineer prior to submitting the mix design. Pea gravel is not permitted.
   B. Light Weight Aggregate (LW) for Structural Concrete: ASTM C330, expanded shale lightweight aggregate. The maximum dry density shall be 115 pcf.
   C. Alkali Aggregates: Aggregate shall be non-reactive per ASTM C1778.
4. See the table below for the required concrete properties:

Class	Use/Location	Strength (psi) 28-Day	Agg Type	Max Agg Size (in)	Slump (in)	Max w/c	Target Air %	ASTM C595 Type	Exposure Category	GWP Limit kgCO$_2$e/m^3
A	UNLESS NOTED OTHERWISE	4,000	NW	1	3-5	0.5	--	IL	F0,S0	324
B	FOOTING AND GRADE BEAMS	4,000	NW	1	3-5	0.5	--	IL (HS)	F0,S0,C1*	324
C	SLAB ON GRADE	4,500	NW	1	3-5	0.45	--	IL	F0,S0	378
D	WALLS	4,000	NW	1	3-5	0.45	--	IL	F0,S0,C1*	324
E	COLUMNS	5,000	NW	1	3-5	0.5	--	IL	F0,S0	378
F	FILL ON DECK	4,000	LW	3/4	3-5	0.45	--	IL	F0,S0	594
G	PIERS / CAISSONS	3,000	NW	1 1/2	5-7	0.6	--	IL	F0,S0,C1*	280

* An exposure class of fC1 is assumed for concrete in contact with soil exposed to moisture per ACI 318, but not due to external sources of chlorides.

5. Slump: Per ACI 301, CH. 4 and CBC section 1705.3. The specified slump above is measured before applying chemical add mixtures. The slump may be increased up to a maximum 8" at the contractor's option for workability and should be noted in the mix design submittal.
6. Global Warming Potential (GWP): as defined in the specifications.
   A. Concrete may be considered one product category to comply with the GWP Limit. A weighted average of the maximum GWP for all concrete mixes installed in the project shall be less than the weighted average maximum GWP as specified above. Calculations shall be submitted for approval.
7. N/A
8. All concrete above grade, including slab on grade, deck fill, wall, topping slab, stair landing and tread, shall have 1.5 pounds of 3/4" long structural reinforcing per cubic yard per concrete.
9. Lean Concrete: Where specifically indicated, containing 2 sacks of cement per cubic yard of concrete. Use only where specifically called for.
10. Non-shrink Grout: ASTM C1107, cementitious, non-metallic, attaining a compressive strength of 8000 psi.
11. Concrete Mix Design Submittal: Prior to ordering concrete, submit for each compressive strength and type of concrete required designed, mix designs signed, and sealed by a registered Civil or Structural Engineer in State of California to Architect (Structural Engineer), Special Inspector, Owner and to Governing Code Authority complying with California Building Code, Chapter 19.
12. Construction Joint: Roughen surface to 1/4-inch amplitude. Clean, remove laitance, thoroughly wet and remove standing water before placing new concrete. Submit to the Architect (Structural Engineer) at least 14 days prior to placing concrete indicating locations of construction joints and extent of pours. Place joints at locations to minimize the effects of shrinkage as well as being placed at points that least impair the strength of the structure. Provide dowels as directed.
13. Embedments and Penetrations in Concrete: No penetration through structural concrete is permitted unless shown in these drawings or specifically accepted in writing by the Architect (Structural Engineer). Do not cut any reinforcing.
   A. Pipes, Sleeves, Conduits, and Ducts: Not permitted embedded or penetrating concrete spread footings, columns, walls or concrete cast over metal decking, except as shown in these drawings.
   B. Conduits Embedded in Structural Concrete Slabs: Not permitted unless limited to two layers of 1 inch, and 1/6 slab thickness. outside diameter conduits and smaller spaced at least 3 inches center to center and within middle third of slab thickness. No conduit embedded in concrete cast over metal decking is permitted. No aluminum conduit is permitted.
14. Chamfered Corners: Provide 3/4-inch charfer at exposed corners of columns, beams and walls except where structural walls are laid flush with column or beam faces, unless detailed otherwise.
15. Curing: Maintain concrete above 50 degrees Fahrenheit and in a moist condition for a minimum of 7 days after placement unless otherwise accepted by the Architect (Structural Engineer).
16. Non-Structural Topping slab shall be normal weight concrete reinforced with 6x6-W3.5xW3.5 W.W.F. at the center line of the slab. See plans & details for information on concrete fill over metal deck.
17. The maximum size for a single elevated concrete slab pour shall be 25,000 sq. ft. and shall have a maximum length to depth ratio of 2:1.
18. The maximum water-soluble chloride ION (CI) content in concrete by percentage of weight cement is 0.30.
19. Where "Styrofoam" or "EPS" is indicated on the drawings, provide expanded polystyrene conforming to ASTM D6817 Type EPS12 with the following physical properties.
   A. Density (min): 0.70 lb/ft^3
   B. Compressive Resistance (min): 2.2 psi @ 1% strain
   C. Flexural Strength (min): 10.0 psi

METAL DECKING

1. Metal Decking and Accessories: Verco Manufacturing Company, type and gauge as indicated on structural drawings, ASTM A653-SS grade 50 minimum conforming to IAPMO report ER-2018, G60 coating, unless heavier galvanized coating is indicated in specifications. Run deck units continuous over three or more spans where possible, deck is designed for unshored construction, UNO. Provide vented deck where vapor impervious material occurs over concrete fill, see Architectural for locations.
2. Deck Welding: AWS D1.3 using prequalified procedures.
   A. Qualification of Welders: Welders shall be experienced in welding light-gauge steel and using prequalified procedures. Erector shall establish welding procedure for arc spot welding of metal decking to structural steel, for each gauge of decking to be used. Prior to deck erection, each welder shall be qualified using this procedure and witnessed by Special Inspector. See California Building Code, Chapter 22A and 17A, for additional qualification requirements.
3. Shop Drawings: Submit to Architect (Structural Engineer) for review. Shop drawings shall include layout of deck, type of deck, methods of attachment, and all deck openings larger than 1'-0".
4. Limits to Non-Structural Items Suspended From Metal Decking:
   A. Hangers supported by metal decking with structural concrete fill shall be anchored using products with valid evaluation report under applicable code.
      a. Limit hangers to the following applications: Acoustical ceilings, ducts no greater than 6 sq. feet cross sectional area, pipes no greater than 3 inch diameter. See typical detailing for further clarification of design intent.
      b. At duct and pipe distributions systems, limit hanger loads to concrete filled metal deck as follows: 250# maximum per metal deck span per 24" width. Support larger duct work and piping from structural beams as shown in typical details.
   B. Hangers supported by metal decking without structural concrete fill shall be anchored using products with valid evaluation report under applicable code.
      a. Limit hangers to the following applications: Acoustical ceilings, ducts no greater than 1.5 sq. feet cross sectional area, pipes no greater than 1.5 inch diameter. See typical detailing for further clarification of design intent.
      b. At duct and pipe distributions systems, limit hanger loads to metal deck w/o concrete fill as follows: 100# maximum per metal deck span per 24" width. Support larger duct work and piping from structural beams as shown in typical details.
5. Pre-punched Holes in Metal Decking and Accessories: Metal deck welding and installation of welded shear studs are not permitted through single layer sheets greater than 16 gauge (G90 MAX), nor through double layer sheets greater than 20 gauge (G60 MAX), nor through sheets with total galvanized coating thickness greater than 1.25 ounces per square foot. Provide pre-punched holes as necessary. Provide closure angle at all openings per typical details.
6. Excess Structural Concrete: Concrete filled metal decking and steel framing will deflect during placement of concrete. These deflections will require placement of concrete in excess of amount based on nominal dimensions in order to bring slab within tolerances of a horizontal plane. Provide excess concrete at no cost to Owner.
7. Deck shall be layed out such that low flutes land on each parallel support wherever possible. Provide filler deck accessory where low flutes do not align with parallel framing. Provide 2" minimum bearing at each support and 2" lap at ends of decking panels.
8. Composite slabs:
   A. See "Proprietary Anchorage and Fasteners" notes for welded headed studs.
   B. Stud welding, inspection and testing shall conform to AWS D1.1, CH. 7.
   C. 18 gauge or thicker decking shall not be lapped where welded studs are attached through decking.

REINFORCING STEEL

1. Reinforcing Steel: All bars shall be deformed.Table Notes:

Use/Location	Type/Grade	GWP Limit (unfabricated) (MTCO$_2$e/MT)	Notes
Standard Bars (#3 thru #6)	ASTM A615, Grade 60	0.89	-
Standard Bars (#7 and larger)	ASTM A615, Grade 60	0.89	-
Bars to be welded (#3 thru #6)	ASTM A706, Grade 60	0.89	-
Bars to be welded (#7 and larger)	ASTM A706, Grade 60	0.89	-
Smooth WWF	ASTM A1064, Fy = 65 ksi	-	A
Deformed wire stirrups	ASTM A1064, Fy = 65 ksi	-	B
Spiral reinforcing	ASTM A1064, Fy = 65 ksi	-	-

   A. Provide WWF in flat sheets only - do not use rolled mesh. Lap 1-1/2 wire spaces (1 foot minimum).
   B. Only D4 and larger are allowed.
   C. MT = Metric ton.
2. Reinforcing shall be placed in accordance with the American Concrete Institute Standard 318 (ACI 318) and Concrete Reinforcing Steel Institute's (CRSI) "Manual of Standard Practice". Reinforcing shall be kept clean and free of rust.
3. Provide all accessories needed to support reinforcing in the positions shown in the drawings. Chairs and spacers for reinforcing shall be non-ferrous or plastic-coated when resting on exposed concrete surfaces.
4. Shop Drawings: ACI 318. Show reinforcing steel placement, including sizes, quantities, spacing, clearances, splice locations, lap lengths, and concrete coverage and submit to the Architect (Structural Engineer). Promptly notify the Architect (Structural Engineer) prior to developing shop drawings if insufficient clear distances between reinforcing steel and other congestion are encountered. Notify Special Inspector of adjustments made from approved Contract Documents which are indicated on accepted shop drawings that facilitate field placement of reinforcing steel and concrete. All bars shall be marked so that they can easily be identified by the project inspector after installation.
5. Lap Splices: At concrete, Provide Class B splices per Typical Bar Development Schedules UNO. At masonry, provide 72db lap splice length UNO. Splice bars only at locations indicated. If additional splice locations are proposed, promptly notify the Architect (Structural Engineer) prior to developing shop drawings.
   A. Splices in Walls: Locate splices in horizontal bars at well-staggered locations. Do not splice vertical bars except at horizontal supports such as floor and roof diaphragms.
6. Mechanical and Welded Splice: Mechanical Splices and Welded Splices are to be used only at the indicated locations. Notify the Architect (Structural Engineer) of all instances prior to developing shop drawings.
   A. Mechanical Splice: Mechanical couplers shall have a current Evaluation Report and satisfy ACI requirements for type 2 couplers for the applicable bar size/grade designation.
   B. Welded Splice: Welded splice shall develop at least 125 percent of the yield strength of the spliced bar for the applicable bar size and grade designation.
7. Minimum Clearances Between Parallel Reinforcing Steel, Including Distance Between Sets of Spliced Bars: 1 inch, 1 bar diameter, or 4/3 times the maximum aggregate size, whichever is greater, 1-1/2 inches, 1-1/2 bar diameters, or 4/3 times the maximum aggregate size, whichever is greater, at columns, piers, and pilasters only. For bundled bars, minimum clear distances between units of bundled bars shall be the same as single bars, except bar diameter is derived from the equivalent total area of the bundle.
8. Specified Concrete Coverage: Place bars as near to the concrete surface as the following specified coverages and in accordance with ACI 117:

A. Slabs on Grade	Locate at the center of slab.
B. Slabs Supporting Earth Above	1-1/2 inches from top.
C. Formed Concrete Exposed to Earth or Weather	1-1/2 inches (#5 and smaller) 2 inches (#6 and larger)
D. Concrete Poured Against Earth (Unformed)	3 inches
E. Walls Above Grade, Exposed to Weather	1-1/2 inches (#5 and smaller) 2 inches (#6 and larger)
F. Walls Above Grade, Not Exposed to Weather	3/4 inch (#11 and smaller) 1-1/2 inches (#14 and larger)
G. Columns (Clear to Face of Ties)	1-1/2 inches
H. Beams (Clear to Face of Ties)	1-1/2 inches
I. Structural Slabs, Not Exposed to Weather (Top and Bottom)	1 inch (#8 and smaller) 1db (#9 and larger)
J. Structural Slabs, Exposed to Weather	1-1/2 inches (#6 and smaller) 2 inches (#6 and larger)
K. Structural Slabs over Void Forms	1 inch (top #8 and smaller); 1 db (#9 and larger) 2 inches (bottom)

9. Dowels between foundations and vertical wall & column bars shall match the size, grade and spacing of the column or wall vertical reinforcing and be lapped with a class B lap splice, UNO.
10. Dowels at Construction Joints: Provide dowels matching size and quantity of reinforcing steel interrupted at construction joints, unless detailed otherwise.
11. Placement of Bars in Walls (unless detailed otherwise): Place vertical bars closest to wall surfaces at curtains containing vertical and horizontal bars of the same size. In curtains with vertical and horizontal bars of different sizes or spacing, place the layer with the most steel area closest to the near wall surface.
12. Bars Terminating at Walls, Columns, Beams, and Foundations: Extend bars to within 2 inches (3 inches at concrete poured against earth) of the far face of the wall, column, beam, or foundation and provide a standard hook unless detailed otherwise.
13. Bars Interrupted by Structural Steel: Extend bars within 2 inches of the steel face and provide a standard hook unless detailed otherwise.
14. Welding: AWS D1.4, edition adopted by applicable code.
   A. Acceptable Reinforcing Steel for Welding: ASTM A706. If welding of reinforcing steel other than A706 is desired, submit a proposed procedure, indicating conformance with the Applicable Code and requirements of the Governing Code Authority, to the Architect (Structural Engineer) for acceptance and to the Governing Code Authority for approval prior to execution.
   B. Rebar to rebar weld is not allowed except where specifically indicated on plans. Provide electrode E80XX (80 ksi) where permitted.
   C. Welder Certification: As required by the Governing Code Authority.
15. See welding notes in the Structural Steel Section of these notes for additional requirements.
16. Bending: Bend cold according to typical details unless otherwise accepted by the Architect (Structural Engineer). Do not field-bend reinforcing steel bars embedded in concrete unless otherwise accepted in writing by the Architect (Structural Engineer).
17. In-plant fusion welding of holding wires to ties, stirrups and hoops in beams, columns and grade beams to preassemble reinforcing steel cages is permitted under the following conditions per CBC 2022 1903.8:
   A. Fusion welding is not allowed to longitudinal reinforcing steel in any beam, column or grade beam. The holding wire area shall not exceed 5% of the beam, column or grade beam cross sectional longitudinal steel area.
   B. Fusion welding of holding wires to the ends of the reinforcing steel placed in mats (spread footings, slab reinforcement, etc.) provided the fusion weld occurs within 6 bar diameters of the free end of the bar (e.g. not allowed at the end of coupled, t-headed or weld spliced bars).
   C. Fusion welding of holding wires shall not occur on a bent portion of a reinforcing bar. After holding wire has been fusion welded to a reinforcing bar, that bar may not be bent where the fusion weld occurs.
   D. Contractor to submit complete shop drawings indicating which members will use fusion welding process for preassembly. Provide complete details indicating the size of stirrups, holding wires and welding requirements.
   E. Holding wires shall conform to ASTM A1064.
   F. All reinforcing steel to be welded shall comply with ASTM A706 Grade 60.
      a. Contractor to submit complete shop welding program outlining the following: Type of specific fusion welding machine (i.e. Schnell IDEA 12/25 Machine, etc.)
      b. Periodic inspection of the in-plant welding.
   G. Fusion welded reinforcing steel shall have one tensile test taken from one specimen sampled at a rate of 2.5 tons or fraction thereof of each size of reinforcing steel fusion welded. No bend test is necessary. The specimen shall have a holding wire attached to it that need not be removed. The elongation requirements shall comply with the ASTM of reinforcing steel specified on the construction documents (e.g. if A615 is specified, but A706 is used due to the welding requirement, then A615 elongation requirements shall be satisfied).
   H. The use of fusion welding shall conform to ACI 318-19:26.6.4.
   I. If field conditions result in conflicts with other structural members (ex. anchor bolts) the rebar must be relocated in the field to avoid said conflicts.

DESIGN LOADING

1. Loading and Design Parameters:
   A. Live Load
      a. Floor / Roof Live Load: See legends as provided on loading plan sheets.
      b. Live Load Reduction:
         - Floor Live Load of 100 psf and below: General (Applicable Code Section 1607A.12.1)
         - Floor Live Load over 100 psf: Unreduced
         - Roof Live Load: General (Applicable Code Section 1607A.14.2)

   B. Wind Design Parameters

Wind Speed Strength level, V:	100 MPH (STRENGTH)
a. Wind Speed Allowable Stress, V_{asd}	78 MPH (ASD)
b. Risk Category:	III
c. Exposure:	C
d. Enclosure Classification:	Enclosed, Hub Canopy: Open
• Internal Pressure Coefficient, GC_{pi}:	+/- 0.18, Hub Canopy: 0.0
e. Components and Cladding Wind Pressure:	

Hub Building (Middle School Building and MDF Building):

	EFFECTIVE AREA		
ZONE	10 SF	100 SF	500 SF
1'	16.0 / -20.0 (psf)	16.0 / -20.0 (psf)	16.0 / -16.0 (psf)
1	16.0 / -34.8 (psf)	16.0 / -27.2 (psf)	16.0 / -21.8 (psf)
2	16.0 / -45.9 (psf)	16.0 / -36.1 (psf)	16.0 / -29.2 (psf)
3	16.0 / -52.5 (psf)	16.0 / -42.9 (psf)	16.0 / -29.2 (psf)
4	20.0 / -21.6 (psf)	17.0 / -18.7 (psf)	16.0 / -16.7 (psf)
5	20.0 / -26.6 (psf)	17.0 / -20.7 (psf)	16.0 / -16.7 (psf)

Hub Canopy:

	EFFECTIVE AREA		
ZONE	10 SF	100 SF	500 SF
1	20.4 / -18.7 (psf)	20.4 / -18.7 (psf)	20.4 / -18.7 (psf)
2	30.6 / -28.9 (psf)	30.6 / -28.9 (psf)	20.4 / -18.7 (psf)
3	40.8 / -56.1 (psf)	30.6 / -28.9 (psf)	20.4 / -18.7 (psf)

Gymnasium Building:

	EFFECTIVE AREA		
ZONE	10 SF	100 SF	500 SF
1'	16.0 / -23.5 (psf)	16.0 / -23.5 (psf)	16.0 / -16.0 (psf)
1	16.0 / -41.0 (psf)	16.0 / -32.0 (psf)	16.0 / -25.7 (psf)
2	16.0 / -54.1 (psf)	16.0 / -42.5 (psf)	16.0 / -34.4 (psf)
3	16.0 / -73.7 (psf)	16.0 / -50.6 (psf)	16.0 / -34.4 (psf)
4	23.5 / -25.5 (psf)	20.1 / -22.0 (psf)	17.7 / -19.6 (psf)
5	23.5 / -31.4 (psf)	20.1 / -24.4 (psf)	17.7 / -19.6 (psf)

Loads indicated are strength-level loads (negative values indicate pressure away from the surface).

   C. Rain Loads
      a. Rain Intensity (15-minute), i: 2.84 (in/hr), 15-min duration/100-year return period

   D. Snow Loads Parameters:

a. Ground snow load, p_g	0 PSF
b. Flat-roof snow load, p_f	0 PSF
c. Risk Category:	III
d. Snow load importance factor, I_s	1.1
e. Thermal factor, C_t	1.0
f. Slope factor, C_s	1.0

   E. Project Seismic Design Parameters:

a. Site Class:	D
b. Mapped Spectral Acceleration (S_s, S_1):	1.608g, 0.557 g (respectively)
c. Site Specific Design Spectral Acceleration (S_{DS}, S_{D1}):	1.224g, 0.760 g (respectively)
d. Site Coefficient (F_a, F_v):	1.142, 2.047 (respectively)
e. Seismic Importance Factor I_e:	1.25
f. Risk Category:	III
g. Seismic Design Catagory:	D

MDF Building Seismic Design:

a. Basic Seismic Force Resisting System:	Special Reinforced Masonry Shear Walls
b. Seismic Response Coefficient, C_s:	0.245 g
c. Analysis Procedure:	Equivalent Lateral Force Procedure
d. Seismic Base Shear:	15.8 kips
e. Response Modification Factor R:	5.0
f. Overstrength Factor, Ω_0:	2.5
g. Deflection Amplification Factor, C_d:	3.5
h. Maximum Story Inelastic Drift:	Roof Floor: 0.1 in (North / South) 0.1 in (East / West)
i. Irregularities:	Vertical: N/A Horizontal: N/A
j. Redundancy Factor, p:	p = 1.3 (North / South) 1.3 (East / West)
k. Building Mass:	64.4 kips
m. Location of Seismic Base	At Top of Footing

DEFERRED SUBMITTAL ITEMS ANCHORED OR SUPPORTED BY STRUCTURE

1. Design Responsibility: Contractor to design and obtain separate Governing Code Authority approval for deferred approval items noted on Gx series sheets.
2. Shop Drawings and Structural Calculations: Submit design plans, details and calculations of deferred submittal items signed and sealed by a structural engineer registered in State of California to Architect (Structural Engineer) for acceptance and to Governing Code Authority for approval prior to fabrication.
3. Design: Design components for imposed forces including lateral restraint complying with Applicable Code, Contract Documents, and applicable portions of AISI Specifications. If building Seismic Force Resisting System (SFRS) is used for lateral restraint, indicate load paths to building lateral resisting system in calculations and show connection forces on shop drawings. Where building provides vertical support, indicate loads and load paths to building in calculations and show connection forces on shop drawings. Dead load elements at lowest level of connection uno Design loads are as follows:
   A. Dead load: Self weight of deferred system (including supported components of other systems).
   B. Live load: Per applicable code.
   C. Seismic and wind loads: Per applicable code. See Design Loading section of General Notes
   D. Design Movement: Lateral Movement: Design Loading (Section E) of General Notes
      Vertical Movement: Live Load Deflection of L/360
4. Stabilizing Elements at Connections to Structural Members: Design connections of deferred submittal items to supporting structure such that torsion to supporting elements is avoided whenever possible. Where torsion in supporting element is resulted, provide beam bottom flange brace per detail 17 or 18/2-SE.11 at each connection point.

QUALITY ASSURANCE (STRUCTURAL OBSERVATION, MATERIALS TESTING, and SPECIAL INSPECTION)

1. Structural Observation:
   A. The Architect (Structural Engineer) of record will perform visual observation of the construction as required CAC 4-333 and 4-341 in accordance with the governing code. These visual observations shall not be considered a substitute for special inspections.
   B. Coordination Responsibilities of Contractor: Notify Architect (Structural Engineer) 48 hours in advance of critical stages of construction indicated below so visits may be scheduled by Structural Observer. Failure by Contractor to meet observation schedule may require removal of subsequent Work for observation. Contractor to bear costs of removal and replacement of finished Work or framing damaged by removal process or as required for corrective action and for any associated scheduling delays.
      Critical stages of construction requiring structural observation:
      1. Prior to pouring first foundation at each of the structures.
      2. Prior to pouring first concrete filled metal deck.
      3. After structural steel erection, Prior to application of architectural furring.
      4. After roof deck welded off.
   C. Pre-construction Meeting: Owner may coordinate and call for meeting between Architect (Structural Engineer) responsible for structural design, Structural Observer, Contractor, affected subcontractors and Special Inspector. Structural observer will preside over this meeting. Purpose of meeting is to identify major structural elements and connections that affect vertical and lateral load resisting systems of structure and to review schedule of Structural Observation, Materials Testing, and Special Inspection of Project.
2. Mill Test Reports Certifying Materials: Contractor to submit mill test reports certifying reinforcing steel, and structural steel are of identifiable tested stock to Owner, Special Inspector, Architect (Structural Engineer) and, upon request, to Governing Code Authority. Ensure materials are properly tagged for identification. If mill test reports cannot be made available or if material cannot be identified, Testing Laboratory will perform tests as directed by Architect (Structural Engineer). Contractor shall pay Testing Laboratory for costs related to tests and inspections of unidentifiable materials or materials furnished without mill test reports, materials found deficient after initial tests and inspections, or materials replacing deficient materials.
   A. Ultrasonic Examination of Heavy Rolled Shapes and Thick Plates at Proposed Welded Moment Connections: Where complete penetration groove welds occur at Groups 4 and 5 structural steel shapes, as defined in ASTM A6, and plates exceeding 2 inches thick, submit mill test reports to Architect (Structural Engineer) and, upon request, to Governing Code Authority. Mill test reports shall certify that Charpy V-notch testing was conducted in compliance with ASTM A6. Supplementary Requirement S5, including impact test complying with ASTM A673 at frequency P with minimum average value of 20 ft.-lbs. absorbed energy at 70 degrees Fahrenheit.
3. Weld Testing and Inspection: Testing Laboratory will submit weld test results to Owner, Contractor, Architect (Structural Engineer) and to Governing Code Authority. See Specifications for testing requirements not indicated on structural drawings.
   A. Structural Steel Welding: Apart from visual inspection and review of fabrication and erection reports of fabricator/erector's own quality control testing and inspection, Owner's Testing Laboratory will perform indicated shop and field inspection and testing. Testing Laboratory will be AWS Q.C.-1 certified and will provide inspectors for continuous inspection of steel fabrication and erection and structural steel shop and field testing of materials and welding will be as follows:
      a. Ultrasonic testing is required for all (100%) and complete penetration welds. Test groove welding on continuity plates by ultrasonic testing after beam flange weld connection. Testing shall occur after completed welds have cooled to ambient temperature. Weld backing removal areas and fillet welds shall be subjected to magnetic particle examination.
      b. Base metal thicker than 1-1/2 inches, subjected to through thickness weld shrinkage, will be ultrasonically tested directly behind such welds after welds have cooled to ambient temperature.
      c. Welds shall be visually inspected and periodically measured (15 percent minimum).
      d. Check 10 percent of fillet welds by magnetic particle (ASTM 109 method). Check 25 percent of continuity plate fillet welds by magnetic particle, UNO. At continuity plates in moment connections (where CJP is used on one or more plate ends), 100 percent of fillet welds shall be tested by magnetic particle.
      e. Ultrasonically test column flanges located at proposed welded moment connections, continuity plates, doubler plates and base plates where column flange or plate thickness exceeds 1-1/2 inches. Test for evidence of laminations, inclusions or other discontinuities in accordance with ASTM A435, straight beam ultrasonic examination of steel plates, or ASTM A898, straight beam ultrasonic examination of rolled steel structural shapes, as applicable. Test zone to include area 6 inches above and below each beam flange connection. For plates, any discontinuity causing a total loss of back reflection not contained within 3-inch diameter circle, or one-half thickness of plate, whichever is greater, will be rejected. For rolled shapes, ASTM A898, Level I criteria applies. Testing will be performed on material prior to fabrication, after fabrication, and after final welding of beam.
      f. f. k-Area welds shall be MT'd no sooner than 48 hours after completion of weld.
      g. Amperage, voltage, polarity and electrode stick out will be verified for compliance with electrode manufacturer's recommendations.
4. Special Inspection: Per DSA-103 and chapter 17A of CBC.

GENERAL

1. Authority Having Jurisdiction (AHJ): Division of the State Architect (DSA SS)
   Applicable Code: 2022 California Building Code (CBC) as modified by AHJ. References to industry standards herein shall be latest edition as adopted by Applicable Code.
2. Field Verification: Field verify existing conditions and dimensions prior to construction. Promptly notify Architect (Structural Engineer) in case of discrepancies.
3. Design Intent: Contract Documents indicate design intent for structure in its completed state. They do not indicate method of construction. Promptly notify Architect (Structural Engineer), prior to proceeding with Work, if design intent requires further clarification.
4. Deviations, Modifications and Substitutions to Approved Structural Drawings: Must be accepted in writing by Architect (Structural Engineer) and approved by Governing Code Authority. No deviation, modification or substitution will be accepted via shop drawing review.
5. Procedures of Construction: Contractor is responsible for procedures of construction complying with national, state and local safety ordinances. Site visits (including Structural Observation) by Architect (Structural Engineer) do not constitute supervision of methods of construction.
   A. Protection of Utilities: Locate existing utilities, including those not shown on Contract Documents, and protect them from damage. Contractor bears expense of repair or replacement of utilities in conjunction with execution of Work.
   B. Excavations: Protect structure, adjacent structures, adjacent properties, streets, and utilities during excavation utilizing lagging, shoring, underpinning and related procedures as may be required. Provide necessary supports for soil at sides of excavations. Contractor and affected trades shall refer to Geotechnical Report for more information.
   C. Protection of Structure: Provide necessary measures to protect structure and adjacent buildings during execution of Work.
   D. Contractor Proposed Revisions: Where a revision of structural design or connection is proposed by Contractor to accommodate construction tolerances, construction sequence and/or dimension modifications, Contractor shall retain a structural engineer licensed in State of California to perform design. Submit stamped and signed design drawings and calculations to the Architect (Structural Engineer) for review and the Governing Code Authority for approval.
   E. Erection Plans: Determine phases of Work requiring erection plans according to applicable safety regulations. Maintain certified copies of erection plans at site during construction.
   F. Shoring, Bracing, and Other Temporary Supports: Design and erect shoring, bracing, and other temporary supports where structure has not attained design strength and as required for safe erection. Ensure floor, roof, and wall members are securely shored and braced during construction. Provide shoring at elevated beams and slabs supporting concrete or masonry walls during and after wall pour until wall attains design strength.
   G. Temporary Loading: Ensure construction loads do not exceed indicated design live load values. Notify affected sub-contractor trades of these design load limits.
   H. Fabrication, Shipment, and Erection of Structural Steel: Ensure stresses occurring during fabrication, shipment, and erection of structural steel are temporary and are less than design and allowable stress capacities of individual members. Do not impair full design and load carrying capacity of members due to fabrication, shipment, or erection. Contractor is responsible for controlling erection sequence, erection procedure, temperature differentials and weld shrinkage to minimize residue stresses. Provide additional materials for the erection of structural steel such as temporary bracing and guy cables as may be necessary at no additional cost. Remove these materials unless approved in writing by Owner. Do not tighten bolts in typical beam to column connections for erection purposes.
   I. Securing Reinforcing Steel, Dowels, Anchor Bolts and Embeds: Firmly support and accurately place complying with ACI standards prior to casting concrete or grout in masonry walls. Use ties and support bars in addition to reinforcing steel shown where necessary. No welding of reinforcing steel, including tack welding, is permitted unless otherwise accepted in writing by Architect (Structural Engineer). Provide plastic or plastic coated chairs and spacers when resting on exposed surfaces.
   J. Coordination Responsibility: Contractor is responsible for coordination of Work including that of sub-contractor trades.
   K. Core drilling of hardened concrete shall only be done after specific review by Architect (Structural Engineer) Core drilling shall not out any reinforcing. Concrete coverage for reinforcement as described in the Reinforcing Steel section of General Notes shall be maintained at locations of cores.
6. Submittals: Submit to Architect (Structural Engineer) as indicated on structural drawings and specifications. General Contractor shall review submittal for completeness and compliance with Contract Documents prior to submission.
   A. Request for Information (RFI) Submittals: Accompany RFI's with partial structural foundation or framing plans showing location in question and affected structural members. Copy partial plan from structural drawings and include grid line locations and floor level. Also provide properly drawn engineering sketches illustrating issues and Contractor's proposed solutions. Photographs are not acceptable substitutes to engineering sketches.
   B. Composite Slab Penetration Submittal: Submit to Architect (Structural Engineer) for each floor indicating size and location of each slab penetration and opening as necessary by all affected trades. Submit penetration plans together with corresponding metal decking or reinforcing steel shop drawings. Submit written statement from Special Inspector that no additional penetrations or openings were added to those shown in penetration submittal.
   C. Concrete and Masonry Wall Penetration Submittal: Submit to Architect (Structural Engineer) for each wall indicating size and location of each wall penetration and opening as necessary by all affected trades. Submit penetration elevations together with corresponding reinforcing steel shop drawings. Submit written statement from Special Inspector that no additional penetrations or openings were added to those shown in penetration submittal.
7. Contract Documents Use: Review Contract Documents in their entirety before performing structural related Work and before developing shop drawings. Bring discrepancies to immediate attention of Architect (Structural Engineer) before starting Work.
   A. Scaling of Drawings: Not permitted.
   B. Additional Structural Requirements: See specifications.
   C. Building Geometry: See architectural drawings for building geometry including, but not limited to, top of floor and roof elevations; depressions; slopes; curbs; drains; trenches; slab and deck edge locations; wall elevations; and size and locations of openings in floors, roof, and walls.
   D. Non-structural Items Requiring Special Provisions: See architectural, mechanical, plumbing, and electrical drawings for non-structural items requiring special provisions during construction. They include, but are not limited to, non-structural walls; size and locations of openings and sleeves penetrating structural walls; size and location of concrete curbs and pads; and size and location of piping, ductwork, and equipment anchorages mounted or suspended from structure. Verify exact size and location of equipment with equipment manufacturer.
   E. Work shown is new unless noted as existing. (E).
8. Materials: Furnish and install in compliance with legally constituted public authorities having jurisdiction including county and local ordinances and safety orders of State Industrial Accident Commission, OHSA. The Architect (Structural Engineer) and Owner accept no responsibility for the contractors failure to comply with these requirements.
9. Penetrations, Embedments, and Openings in Structural Members: No penetration, embedment, opening, sleeve, pipe, or conduit shall occur in structural members including footings, slabs, walls, columns, and beams unless specifically shown or indicated on structural drawings.
10. Typical Details: Details on sheets indicated as typical are applicable throughout Project wherever the described condition occurs and may or may not be specifically referenced on structural drawings. Contractor is responsible for identifying these details and understanding extent of their application prior to performing Work. Details not shown or noted shall be similar to those shown for similar construction. Contractor shall submit RFI's for details such as this to Architect (Structural Engineer) prior to proceeding with work.
11. Evaluation Report:
   A. References to Evaluation Reports for proprietary materials herein shall be latest edition as adopted by Authority Having Jurisdiction (AHJ).
   B. For proprietary structural elements and products, product to hold Evaluation Report in compliance with applicable code for products intended use.
   C. Approved Evaluation Report Agencies:
      a. ICC (ICC-ES)
      b. IAPMO (IAPMO-ES)
      c. OSHPD (OPA / OPM / OSP / OPD)
      d. City Of Los Angeles (COLA/RR)
      e. Miami-Dade (NOA)
      f. Other Agencies as noted in DSA IR A-5.

EARTHWORK and FOUNDATIONS

1. Geotechnical Report: Perform soils work complying with foundation design based on recommendations in report; prepared by LEIGHTON CONSULTING, INC. , dated OCT 16, 2024 Revised May 23, 2025 and subsequent addenda letters as applicable. Maintain at site a copy of report and addenda.
2. Allowable Foundation Design Values per Geotechnical Report.
   A. Bearing Capacity: 3,000 psf. Footings for proposed structures should have a minimum embedment of 2 feet and have a minimum width of 2 feet. The allowable bearing pressure may be increased by 500 psf for every foot increase in width and by 500 psf for every foot increase in embedment until a maximum of 4,000 psf. Values may be increased by one-third for transient loading.
   B. Passive Lateral Bearing Pressure: 250 psf/ft. Values may be increased by one-third for transient loading.
   C. Coefficient of Friction: 0.3.
   D. Combined Lateral Resistance: The allowable lateral resistance can be taken as the combined effect of friction resistance and passive resistance.
   E. Unit of Subgrade Modulus: 100 pci for 1-ft square footing reduced by [(B+1)/2B]^2 for larger square footing sizes. B is the square footing width. 75 pci for slab-on-grade.
3. Grading, Excavations, Backfill and Compaction of Backfill: Comply with Geotechnical Report and requirements of Governing Code Authority and performed only under Continuous Special Inspection of geotechnical engineer. Building pads shall be over excavated as recommended in Geotechnical Report. If soft pockets are discovered during over excavation, additional over excavation will be required as directed by the Geotechnical Engineer.
4. Foundation Excavations: Foundations are to bear on approved compacted fill as indicated in Geotechnical Report. Excavations are to be inspected by geotechnical engineer prior to placement of reinforcing steel and formwork. Ensure excavations are clean, dry and free of debris or loose soil. Slope sides of excavation not less than minimum slope indicated in Geotechnical Report. Cast concrete directly against excavated surfaces.
5. Backfilling of Retaining Walls: Place after completion and inspection of waterproofing. Adequately shore retaining walls during backfill operation. Unless adequately shored, do not place backf

LIGHT GAUGE METAL FRAMING GENERAL NOTES

1. Minimum yield strength shall be as follows:
   A. 43 mils (18 gauge) and lighter (33 ksi):
      a. Carbon Sheet Steel to be Painted: ASTM A1003, Grade 33, Type H.
      b. Galvanized: ASTM A653, SS Grade 33.
   B. 54 mils (16 gauge) and heavier (50 ksi):
      a. Carbon Sheet Steel to be Painted: ASTM A1003, Grade 50, Type H.
      b. Galvanized: ASTM A653, SS Grade 50.
2. Manufacturer and Properties: Member of Steel Stud Manufacturer's Association (SSMA) complying with ICC-ESR 3064P or Cemco complying with ICC-ESR 3016. Provide punched studs as scheduled in these drawings with minimum effective section properties as indicated in the referenced evaluation report.
3. Design Gauge Thicknesses: Indicated properties are based on the following thicknesses:
   12 ga. - 0.1017 inch, 97 mils
   14 ga. - 0.0713 inch, 68 mils
   16 ga. - 0.0566 inch, 54 mils
   18 ga. - 0.0451 inch, 43 mils
   20 ga. - 0.0346 inch, 33 mils
4. Track Material: Provide unpunched track of dimensions to ensure proper fit of studs with minimum effective section properties as indicated in the referenced evaluation report.
5. Lateral Bridging for Studs: Required when rigid wall finish does not continue full height on either or both sides of studs. Install horizontal straps or cold-rolled channels as shown and in accordance with Section D3 of AISI specification. See typical details.
6. Lateral Blocking for Joists: Joists shall be braced by full-depth blocking at all points of support. Joist blocking shall also be provided at the following locations: See typical details.
7. Joist Web Punch-Out Locations: Web punch-outs shall not be located closer than twice the member depth from edge of bearing support or concentrated loads, 12" minimum. Do not provide punchouts at tracks.
8. Securing Studs and Braces: Plumb, align and tightly nest in both upper and lower tracks with secure attachment to both flanges of tracks. Splices in axial loaded studs and braces are not permitted.
9. Self-Drilling Screws: See General Notes.
10. Welding: ANSI/AWS D1.3 and CBC Section 2210. Wire tying of framing components is not permitted.
    A. Welder Certification: Governing Code Authority.
    B. Electrodes: E60XX at 33 ksi members, E70XX at 50 ksi members.
    C. Touch-Up: Zinc-rich paint at galvanized members and regular paint at carbon steel sheet.

MASONRY

1. Specified Compressive Strength of Masonry (f'm): 2000 psi typical unless noted otherwise.
2. Verifying Specified Compressive Strength of Masonry (f'm): Use masonry prism testing method unless otherwise acceptable to Architect (Structural Engineer). Submit masonry prism data for each type and compressive strength of masonry required, with a professional engineer's signature and state of California seal, to Architect (Structural Engineer). Compliance with minimum required compressive strength shall be based on Application Code Section 2105A.2.
3. Concrete Block: ASTM C90, medium weight, attaining a minimum compressive strength as required to meet specified compressive strength of masonry (f'm). Completed (grouted and mortared) masonry assembly not to exceed 115 pcf max. dry density.
4. Face Brick: ASTM C216.
5. Portland Cement for Mortar and Grout: ASTM C150, type I or II. Use of masonry cement or plastic cement is not permitted.
6. Aggregates for Mortar and Grout:
   A. Aggregates for Mortar: ASTM C144.
   B. Aggregates for Grout: ASTM C404, coarse type.
7. Mortar: ASTM C270, Type S, attaining a minimum compressive strength as required to meet specified compressive strength of masonry (f'm)
8. Grout: ASTM C476, coarse type, attaining a minimum compressive strength as required to meet specified compressive strength of masonry (f'm). However, in no case shall grout compressive strength be less than the greater of f'm or 2000 psi at 28 days.
9. Reinforcing Steel: Reinforcing steel section of general notes unless indicated otherwise.
10. Masonry Wall Penetration Submittal: Submit for each wall indicating size and location of each wall penetration and opening as necessary by affected trades. Submit together with appropriate reinforcing steel shop drawings. Submit written statement from Special Inspector that no additional penetrations or openings were added to those shown in penetration submittal.
11. Reinforcing Steel Splices: Lap reinforcing steel at splices a minimum of 72 bar diameters, except dowels in footings at base of walls shall splice a minimum of 72 bar diameters, unless noted otherwise. Where minimum clear distance between bars at adjacent splices is less than one bar diameter, increase lap length 30 percent unless splices are staggered at least 24 bar diameters.
12. Dowels for Walls, Columns, Pilasters, and Piers: Match size and spacing of vertical reinforcing steel, unless noted otherwise. Set dowels to align with cells containing reinforcing steel.
13. Minimum Reinforcing Steel Clearances:
    A. Minimum Clearances Between Reinforcing and Outside Face of Masonry: 2 inches except in no case shall clearance be less than 2-1/2 bar diameters.
    B. Minimum Clearance Between Reinforcing and Inside Face of Grout Cell: 1/2 inch or 1 bar diameter whichever is greater.
    C. Minimum Clearance Distances Between Parallel Reinforcing: 1 inch or nominal bar diameter, whichever is greater. Increase to 1-1/2 inches or 1-1/2 times nominal bar diameter, whichever is greater, at columns, pilasters, and piers only.
14. Placement: Set courses in running bond pattern unless indicated otherwise. Set cells in vertical alignment. Provide flush mortar joints at surfaces to receive waterproofing or damp-proofing.
15. Grouting: Grout solid all cells. Mechanically vibrate grout in cells.
    A. Grout Height Limits: CBC Section 2104A.1.3, TMS 602, Article 3.5 D
    B. Horizontal Construction Joints: Hold grout 1 1/2 inches below top of masonry unit if work is stopped one hour longer.
    C. Grout Cover Around Reinforcing Steel, Anchor Bolts and Inserts Penetrating Masonry Shell: 1 inch minimum.
16. Horizontal Bars Terminating at Wall Ends and Opening Jambs: Extend bars to within 2 inches of end of wall and provide standard ACI 90-degree hook unless detailed otherwise.
17. Control joints shall be provided as indicated on Arch and wall elevations per detail 01/2-S6.61. If not indicated on Arch, provide control joints at 25'-0" O/C maximum and coordinate w/ Arch.

PROPRIETARY ANCHORAGES and FASTENERS

1. Anchorages:
   A. Drill and Epoxy Anchors and Rebar:
      a. At Concrete: Hilti HIT-RE 500 V3 adhesive anchor system complying with ICC-ES Evaluation Report ESR-3814.
      b. At Masonry: Hilti HIT-HY 270 adhesive anchor system complying with ICC-ES Evaluation Report ESR-4143.
      c. Provide anchor type, size and embedment as indicated in details.
      d. Overhead applications must be installed using the Hilti HIT-SZ piston plug system.
   B. Mechanical (Expansion) Anchors:
      a. At Concrete: Hilti KB-TZ2 carbon steel expansion anchor complying with ICC-ES Evaluation Report ESR-4266.
      b. At Masonry: Hilti KB-TZ2 carbon steel expansion anchor complying with ICC-ES Evaluation Report ESR-4561.
      c. Where mechanical anchor is exposed to weather, provide stainless steel anchor conforming to the Evaluation Report in lieu of carbon steel.
   C. Welded Shear Studs: Nelson S3L flux filled, headed stud anchors, 65,000 psi minimum ultimate tensile strength conforming to ASTM A29, automatically end welded in field and complying with ICC-ES Evaluation Report ESR-2856.
   D. Welded Deformed Anchors: Nelson DZL, cold rolled, deformed steel reinforcing bars conforming to ASTM A1064 and complying with ICC-ES Evaluation Report ESR-2907.
2. Fasteners:
   A. Power/Powder Actuated Fasteners (Indicated "Shot Pins" or "PAF" on Drawings): Hilti Low-velocity Power Actuated Drive, 0.157" diameter (X-U), complying with ICC-ES Report ESR-2269. Provide appropriate washer between fastener head and light gauge metal or wood surface. Shot pins shall not be used @ PT slab or beams.
   B. Self-Drilling Metal Screws (Indicated "Screws" or "SMS" on Drawings): Hilti Self Drilling Screw complying with current ICC-ES Evaluation Report ESR-2196.
   C. Concrete Screws: Hilti KH-EZ carbon steel screw anchor complying with ICC ES Evaluation Report ESR-3027.
   D. Masonry Screws: Hilti KH-EZ carbon steel screw anchor complying with ICC ES Evaluation Report ESR-3056.
   E. Self-Drilling wood Screw: At steel to wood connections (Indicated "SDS" on drawings): Simpson SDS screw complying with ICC-ES ESR 2236. At wood to wood connections (Indicated "SDWS" on drawings): Simpson SDWS screw complying with IAPMO-UES ER 192.
   F. Lag Screw: Lag Screw complying with ANSI / ASME B18.2.1
   G. Where fasteners are exposed to weather, provide stainless steel fasteners conforming to the Evaluation Report in lieu of carbon steel.
3. Installation: See manufacturer's written instructions and referenced ICC-ES evaluation report. Contractor shall arrange an anchor manfacturer's representative to provide onsite installation training for all anchor products specified.
   A. Prior to drilling holes for post-installed anchors, contractor shall locate existing rebar, prestressing tendons, post-tensioning tendons, and embedded utilities using non-hazardous, non-destructive methods with accurate location tolerances (plus or minus 1/4-inch). Do not cut, hit, or otherwise damage existing rebar or tendons during anchor installation.
   B. Drilling Holes in Existing Concrete or Masonry for Anchorages: Use non-pneumatic, rotary hammer tools with ANSI compliant non-rebar cutting drill bits to drill holes of proper tolerances. Locate existing rebar including prestressing and post-tensioning tendons using non-hazardous, non-destructive methods with accurate location tolerances (plus or minus 1/4-inch) prior to drilling holes to avoid cutting or damaging Holes shall be thoroughly cleaned per manufacturer's written recommendations prior to installation of anchorages.
   C. Deleterious Materials: Keep anchorages, including holes for drill and epoxy anchors and mechanical anchors, free of dust, grease, and other materials that impair bond.
   D. Use of diamond core bit with roughening tool for anchor holes requires approval from Engineer of Record prior to drilling. Unless otherwise shown in the drawings, all holes shall be drilled perpendicular to the concrete surface.
   E. Embedment Depths:
      a. Mechanical Anchors: Embedment depths noted in drawings are the effective minimum embedment UNO. Refer to applicable evaluation report for the corresponding minimum hole depth and nominal embedment.
      b. Screw Anchors: Embedment depths noted in drawings are the nominal minimum embedment UNO. Refer to the applicable evaluation report for the corresponding minimum hole depth.
   F. Anchor installer certification is required for all installers of drill and epoxy anchors in horizontal or upwardly inclined orientation. Installer qualification must be provided to the inspector prior to installation.
   G. Installation Torques for Expansion Anchors shall be as noted:

Nominal Anchor Diameter	Expansion Anchor Installation Torque (ft-lb)			
	Into Concrete		Into Masonry	
	KB-TZ2 Carbon Steel	KB-TZ2 Stainless Steel	KB-TZ2 Carbon Steel	KB-TZ2 Stainless Steel
1/4"	4	6	4	6
3/8"	30	30	15	15
1/2"	50	40	25	15
5/8"	40	60	30	35
3/4"	110	125	50	50

   H. Installation Torques for Screw Anchors shall be as noted:

Nominal Anchor Diameter	Screw Anchor Installation Torque (ft-lb)					
	Into Concrete				Into Masonry	
	Hilti KH-EZ Hex	Hilti KH-EZ C	Hilti KH-EZ CRC	Hilti KH-EZ E & KH-EZ I	Hilti KH-EZ (Hex, P, PM, PL & C)	Hilti KH-EZ CRC
1/4"	18		N/A	18	21	N/A
3/8"	40 (19 @ h_{nom} <2.5")		40	40	22	20
1/2"	45	N/A	45	N/A	34	25
5/8"	85	N/A	85	N/A	38	35
3/4"	95	N/A	85	N/A	70	45

   Note: 1/4" dia. Hilti KH-EZ P, PM & PL in concrete shall have installation torque of 18 ft-lb.
4. Testing
   A. See DSA 103 Testing and Inspections.
   B. Installation in Concrete:
      a. Provide testing of post-installed anchors in concrete per CBC 2022 1910A.5.
   C. Installation in Masonry:
      a. Provide testing of post-installed anchors in masonry per CBC 2022 1910A.5 as required by section 1705A.4.

STRUCTURAL STEEL

1. Provide readily identifiable structural steel in compliance with Applicable Code Section 2202A.1.
2. Structural Steel: Furnish structural steel complying with the following ASTM standard specifications, unless noted otherwise:

Use/Shape	Type/Grade	GWP Limit (unfabricated) (MT CO_2e/MT)	Notes
Wide Flanges and Channels	ASTM A992, Grade 50	1.01	
Angles	ASTM A572, Grade 50	1.01	
Plates	ASTM A572, Grade 50	1.49	
Hollow Structural Sections (rectangular and round)	ASTM A500, Grade C (50 ksi)	1.71	
Pipes:	ASTM A53, Grade B (35 ksi)		
Anchor Rods:	ASTM F1554, Grade 55		Weldable All Threaded
Headed Anchor Bolts	ASTM F1554, Grade 55		Weldable

3. Holes for Bolted Connections and Anchor Rods: AISC "standard" holes, unless noted otherwise. See Note 11, for oversized holes for anchor rods in non-frame base plates.
4. High Strength Bolts, Nuts and Washers: AISC "Specification for Structural Joints Using High-Strength Bolts."
   A. Hardened Washers: ASTM F436, under nuts except where plate washers are used. Provide beveled washers where joint face slope is greater than 1:20.
   B. Tightening: Snug tight for all high strength bolts except tighten A325-SC and A490-SC bolts to at least the minimum proper tension according to AISC Specification.
   C. Provide Class A Faying Surface or better at bolted connections indicated with "SC" type bolts.
   D. All bolts parts of "SFRS" shall be "SC" type bolts.
5. Welding:
   A. Applicable Welding Standard: Applicable Code and latest adopted edition of AWS D1.1 and D1.8.
   B. Pre-qualified and Non Pre-qualified Welds: Welds shall be pre-qualified in compliance with Applicable Welding Standard. Where non pre-qualified welds are to be used, qualify by test and procedure qualification test record complying with Applicable Welding Standard.
   C. Work performed by Welders and Inspectors: Adhere to approved Welding Procedure Specification (WPS). Each welder and inspector shall retain a copy of WPS.
   D. Pre-construction Meeting: Conduct to include Architect (Structural Engineer), fabricator, erector, Contractor and inspectors to discuss Welding Procedure Specification (WPS).
   E. Welding Procedure Specification (WPS): Fabricator/erector to develop WPS in compliance with Applicable Welding Standard. Submit to Architect (Structural Engineer) for acceptance and Governing Code Authority for approval prior to fabrication. WPS submittal to include the following:
      a. Welding manufacturers' specifications.
      b. Information required by Applicable Code, Contract Documents and any other information necessary to produce welds that are in compliance with Applicable Welding Standard.
      c. Detailed sequence of weld sketches addressing effects of welding heat for welds at joints and within seismic frame assemblies as a whole. Plan sequence of erection and welding to minimize locked in stresses and distortion considering effects of welding heat. Procedures submitted shall result in completed connections which comply with design intent of structural drawings. No deviation from structural drawings is permitted unless otherwise accepted by Architect (Structural Engineer) and approved by Governing Code Authority.
      d. Welding parameters recommended by electrode manufacturer.
      e. List of applicable base metal types and thicknesses.
      f. Welding joint sketches including joint type, weld type, joint geometry, and applicable dimensions. Individual weld passes shall be identified in sketches and numbered to identify the sequence of their deposition. Sketches shall identify the maximum layer thicknesses and bead widths. In no case shall layer thickness exceed 1/4-inch, nor shall maximum bead width exceed 5/8-inch.
      g. Applicable welding process.
      h. Position of welding.
      i. List of filler metal per Applicable Welding Standard and electrode specification and classification. Include details showing shielding material to be used.
      j. Minimum preheat requirements, interpass temperatures and post weld heat treatment. Minimum specified preheat shall meet requirements of AWS D1.1, table 3.2, and AISC 360-16 Section M2-2 requirements for jumbo sections.
      k. List of applicable electrical characteristics for process employed. Clearly indicate specific values required for each welding pass. These electrical characteristics shall include at a minimum the following:
         - Electrode diameter.
         - Type of current and acceptable ranges of current measured in amperage. For wire feed processes, indicate manufacturers' recommended melt-off rate, deposition rate, and wire feed speed.
         - Voltage (for all processes).
         - Actual field condition travel speed and manufacturer's data for travel speed.
         - Electrode extension (stick out) for wire feed processes.
         - Amperage, voltage and electrode extension (as applicable) shall be within filler metal manufacturer's recommendations (compare to AWS D1.1, Section 3.6 and 3.7).
         - Electrode manufacturer's technical information, with identification number listed, and welding parameters recommended.
   F. Welding Electrode (Filler Metal): E70xx (70 ksi) uno, provide filler metal with Charpy V-notch toughness of 20 ft/lbs at -20 degrees Fahrenheit at complete penetration groove welds.
      a. Welds indicated as part of the "SFRS" shall comply with AISC 341 sections A3.4a and I2.3. These welded connections shall be made with a filler metal achieving a minimum Charpy V-notch toughness of 20ft/lbs at a temperature lower than 0°F.
      b. Welds indicated as "Demand Critical" (DC) shall comply with AISC 341 sections A3.4b and I2.3. These welded connections shall be made with a filler metal achieving a minimum Charpy V-notch toughness of 20ft/lbs at a temperature lower than 0°F, and a filler metal producing welds that have a minimum Charpy V-notch toughness of 40ft/lbs at temperature lower than +70°F.
   G. Welding Toughness Requirements: Certify conformance to Charpy V-notch toughness requirements with tests by an independent testing laboratory for each AWS classification, manufacturer and trade name. Testing procedures shall be in accordance to Applicable Welding Standard and AWS D1.8
   H. Fabricators: Perform shop welds by fabricators approved by LA City or AISC.
      a. Welder Qualification: Welders, regardless if Work is performed in shop or in field, shall be qualified for the Work they will be doing and shall have certifications current and acceptable to Governing Code Authority.
      b. Special inspection shall be required for all welding, as required by governing code authority.
   I. Welds Exposed to View:
      a. Faces of fillet welds exposed to view shall have as-welded surfaces that are reasonably smooth and uniform. No finishing or grinding shall be required, except where clearances or fit of other items may so necessitate.
      b. Partial and full penetration welds exposed to view shall be ground smooth and flush with finish surface of steel. Remove backup bars and weld tabs. Fill holes with weld metal or body solder and smooth by grinding or filing.
   J. Groove Preparation: Clean groove preparation thermal cuts by grinding.
   K. Termination of Welds: Terminate at joint ends in a manner that ensures sound welds. Use extension bars and run-off tabs whenever necessary.
   L. Hand-held Calibrated Amp and Volt Meters: To be used by fabricator, erector and inspectors to assure proper amperage and voltage of welding process. Measure amperage and voltage at arc. Verify travel speed and electrode stick-out in compliance with electrode manufacturer's recommendations and with approved WPS.
   M. Storage of Electrodes: Adhere to Section 5.3 of AWS D1.1.
   N. Weld each flange of moment frame beam to column connections in one continuous process without cooling below pre-heat temperature.
   O. Welding of ASTM A913 Materials: Perform according to requirements of latest edition of AWS standard, structural drawings and specifications, whichever is more stringent.
   P. Minimum Fillet Weld Size: Where minimum fillet weld size, as stipulated by AISC Section J2 and Table J2.4, exceeds fillet weld size indicated on structural drawings, use AISC stipulated size.
   Q. Minimum Groove or Butt Weld Size: Provide complete penetration unless indicated otherwise.
   R. Weld Length: Length of welds shown are net effective lengths. Where length of weld is not indicated, provide weld full length of joint.
   S. Welding at Galvanized Steel: Galvanization shall be ground off prior to welding. Repair galvanization after completion of welding.
6. Shop Drawings: Submit To Architect (Structural Engineer) for review and, upon request, to Governing Code Authority. Include sequence of erection procedures.
7. Sustainable Design Submittals: Submit type III factory-specific or product-specific environmental product declaration (EPD) for each of the following products:
   A. Hot Rolled Structural Steel
   B. Hollow Structural Steel
   C. Steel Plate
8. Fabrication: Perform in shop certified by AISC or City of Los Angeles.
   A. Moment Connections: Orient flange stiffener plates and cap plates used in moment connections so that rolling direction of plate is parallel with direction of principal stress.
   B. Horizontal Members: Place natural camber up.
   C. Filler Plates: Provide at splices of parts having more than 1/8-inch difference in thickness. Filler plates to match grade of material spliced.
9. Traceability:
   A. Material tracing is required for all steel including miscellaneous metals, connectors, and steel products manufactured by third parties. The contractor is advised that material tracing is required as directed by DSA and the project inspection team and may include any or all of the levels of traceability described below:
      a. Lot traceability: materials can be traced to the set of mill test reports (MTRs) for the project.
      b. Piece-mark traceability: heat number can be correlated to each piece mark.
      c. Piece traceability: heat number can be correlated for each piece, which requires separate piece marks for each piece, or marking of each individual piece with its heat number.
   B. Prior to placing the mill order, the contractor shall schedule a preconstruction meeting to include the AOR, SEOR, PI and inspectors responsible for inspection of the steel material fabrication and erection/installation for the purpose of reviewing material traceability requirements.
   C. The contractor shall include the cost of piece traceability in their basic services and provide deductive alternates for piece-mark and lot traceability to be provided as a credit to the Owner.
10. Cleaning: After fabrication, clean steel surfaces free of rust, loose mill scale, and oil.
11. Oversized Holes for Anchor Rods in Non-Frame Column Base Plates: Oversized holes in base plate may be provided at contractor's option in accordance with AISC Table 14-2 UNO. Where oversized holes are provided, provide plate washer with standard hole with minimum size per AISC Table 14-2 (3/8" thick min) UNO.
12. Exposure to Soil: Encase structural steel in lean concrete with 4-inches concrete cover where exposed to soil.
13. Exposure to Weather: UNO, structural steel (including connection elements) exposed to weather shall be hot dipped galvanized. At welding on galvanized members, galvanization shall be ground off prior to welding. Repair galvanization after completion of welding.
14. Structural Steel Allowance: In addition to the steel shown or implied in this document, allow for an additional 2 tons of structural steel to be constructed at the direction of the Structural Engineer during construction. The allowed steel may be of any shape or sizes, including plates, wide flanges, tubes, pipes, channels, angles, and/or any other structural shapes. The number of pieces may vary. The locations of applications may vary. Direction may be given in multiple occasions during construction. The allowance should include all fabrication and construction related services, such as shop drawings, shop preparation, field erection and coordination, bolted connections and field welding. Expenditure of any part of this allowance shall be approved in writing by the Structural Engineer prior to any fabrication and erection.
15. Heavy Sections
   A. Heavy sections shall comply with AISC 360-16 Section A3.1c.
   B. Heavy sections forming part of the "SFRS" shall also comply with AISC 341-16 Section A3.3.
   C. Welded Splices including welds to baseplates shall comply with AISC 360-16 Section J1.5.
16. See General Notes, Quality Assurance section, Notes 3 and 4 for non-destructive testing.
17. SFRS denotes items considered part of the "SEISMIC FORCE RESISTING SYSTEM" (Refer to AISC 341-16 and AWS D1.8).
18. DC denotes welds considered "DEMAND CRITICAL" per AISC 341-16 Section A3.4B and I2.3.
19. Field weld flag symbols indicate design intent but are not requirements. Whether a weld is to be made in shop or field is means and methods and to be coordinated by contractor.
20. Where bent plates specified cannot be bent due to thickness provide two plate pieces joined with a complete penetration weld.

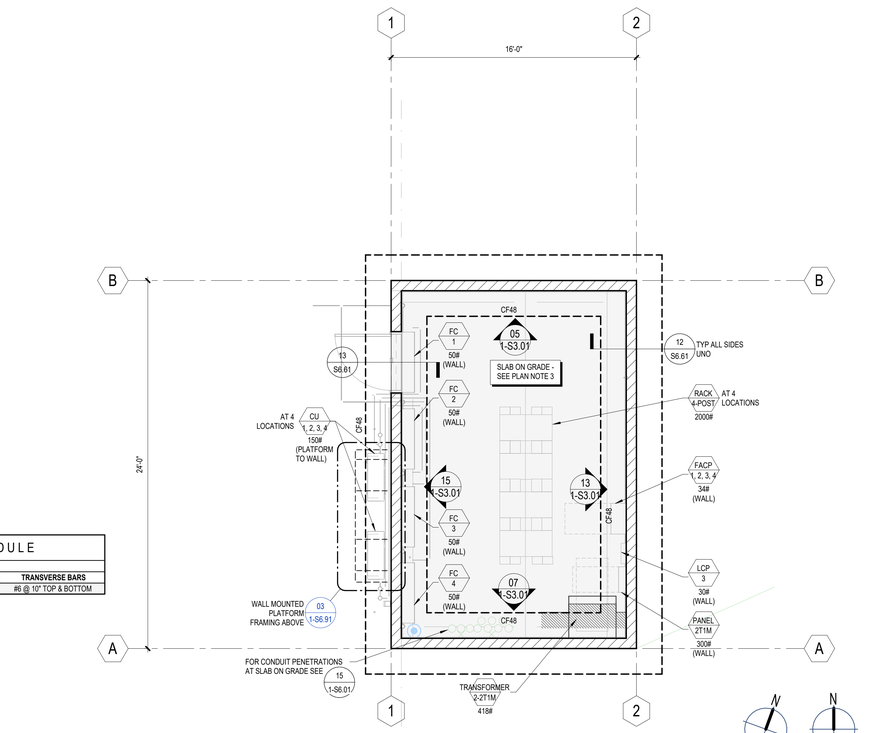
MDF - LOADING DIAGRAM

1-S1.21



MDF - ROOF FRAMING PLAN | 1/4" = 1'-0" | 07

PLAN NOTES

1. FOR GENERAL NOTES SEE 1-S0 SERIES SHEETS. FOR TYPICAL DETAILS SEE 1-S6 SERIES SHEETS.
2. SEE ARCHITECTURAL, MECHANICAL, ELECTRICAL, and PLUMBING DRAWINGS FOR TOP OF STRUCTURAL CONCRETE SLAB OR METAL DECK ELEVATIONS, DEPRESSIONS, SLOPES, CURBS, DRAINS, PADS, DECK EDGE LOCATIONS; WALL OVERALL DIMENSIONS; and LOCATIONS OF OPENINGS IN WALLS and SLABS NOT INDICATED ON STRUCTURAL DRAWINGS. CMU WALLS EXTERIOR FACE TO ALIGN WITH GRID LINES.
3. CENTER COLUMNS AT GRID INTERSECTIONS UNLESS NOTED OTHERWISE.
4. BEAMS ARE SPACED EQUALLY BETWEEN WALLS UNLESS NOTED OTHERWISE.
5. N/A
6. N/A
7. N/A
8. NO PENETRATION IN STRUCTURAL STEEL IS PERMITTED UNLESS SPECIFICALLY SHOWN ON STRUCTURAL DRAWINGS.
9. SEE 1-S6.9X SERIES FOR EQUIPMENT ANCHORAGE UNLESS NOTED OTHERWISE. WHERE EQUIPMENT IS ANCHORED DIRECTLY TO BEAM, LOCATE BEAMS CENTERED UNDER EQUIPMENT CURB. WHERE EQUIPMENT IS ANCHORED ON A CONCRETE PAD, LOCATE BEAM CENTERLINE 6" INWARD FROM EDGE OF PAD. WHERE EQUIPMENT IS ANCHORED TO A BUILT-UP CONCRETE PAD, CENTER BEAM ON CONCRETE WALL OF BUILT-UP CONCRETE PAD. COORDINATE EXTENT OF CONCRETE PADS SUPPORTING EQUIPMENT WITH MANUFACTURER AND WITH EDGE DISTANCE REQUIREMENTS PER EQUIPMENT ANCHORAGE DETAILS.
10. COORDINATE DETAILING AND SECONDARY MEMBERS FOR DEFERRED SUBMITTAL ITEMS PER GENERAL NOTE SECTION B. COORDINATE DETAILING AND SECONDARY MEMBERS FOR DEFERRED SUBMITTAL ITEMS PER GENERAL NOTE SECTION DEFERRED SUBMITTAL ITEMS ANCHORED OR SUPPORTED BY STRUCTURE.
11. N/A
12. ROOF FRAMING HAS BEEN DESIGNED FOR AN ADDITIONAL 5 PSF UNIFORM DEAD FOR FUTURE PV. DECK HAS NOT BEEN DESIGNED FOR CONCENTRATED LOADING IMPOSED BY PV SYSTEM.

LEGEND

- +X'-X" — INDICATES ELEVATION OF TOP OF STRUCTURAL DECK - SEE ARCHITECTURAL FOR TOP OF STRUCTURAL DECK IF NO ELEVATION INDICATED
- INDICATES BEAM BENEATH DEPRESSED OR SLOPED STRUCTURAL SLAB (SEE ARCH PLANS FOR FURTHER CLARIFICATION - COORDINATE TOP OF STEEL ELEVATION AS REQUIRED)
- WXxXX — INDICATES NON-FRAME STEEL BEAM
- INDICATES 8" THICK CONCRETE BLOCK SHEAR WALL SOLID GROUTED - FOR REINFORCING and OTHER INFORMATION SEE CMU WALL ELEVATIONS and 1-S6.61
- RDX — INDICATES ROOF CONSTRUCTION MARK - SEE DETAIL 01/1-S6.12
- SFRS — INDICATES SEISMIC FORCE RESISTING SYSTEM (SFRS) - SEE GENERAL NOTE SECTION "STRUCTURAL STEEL" NOTE 4.D - WHEN (SFRS) IS INDICATED, ALL MEMBERS IN THAT FRAMING LINE ARE (SFRS) MEMBERS

MDF - FOUNDATION PLAN | 1/4" = 1'-0" | 05

CONTINUOUS FOOTING SCHEDULE

Mark	FOOTING SIZE (WIDTH x DEPTH)	REINFORCING	
		CONTINUOUS LONGITUDINAL BARS	TRANSVERSE BARS
CF36	48"x24"	(5) #7 @ TOP & BOTTOM	#6 @ 10" TOP & BOTTOM

PLAN NOTES

1. FOR GENERAL NOTES SEE 1-S0 SHEETS. FOR TYPICAL DETAILS SEE 1-S6 SERIES SHEETS.
2. SEE ARCHITECTURAL, MECHANICAL, ELECTRICAL, and PLUMBING DRAWINGS FOR TOP OF CONCRETE SLAB ON GRADE ELEVATIONS, DEPRESSIONS, SLOPES, OPENINGS, DRAINS, TRENCHES, PADS, and CURBS; SLAB EDGE LOCATIONS; WALL OVERALL DIMENSIONS; and LOCATIONS OF OPENINGS NOT INDICATED ON STRUCTURAL DRAWINGS.
3. BUILDING SLAB-ON-GRADE: 5" THICK W/ #4 @ 18" O/C EACH WAY at CENTER OF SLAB OVER 15 MIL STEGO WRAP VAPOR BARRIER OR APPROVED EQ (LAP 6" AT JOINTS and TAPE SEAL - OMIT VAPOR BARRIER AT EXTERIOR AREAS) OVER AT LEAST 2 FEET OF NON EXPANSIVE (EI<20) AND PROPERLY COMPACTED FILL AS INDICATED IN THE GEOTECHNICAL REPORT. PROVIDE CONSTRUCTION JOINTS OR WEAKENED PLANE JOINTS IN SLAB-ON-GRADE EACH DIRECTION PER DETAIL 06/1-S6.01 - AT AREAS TO RECEIVE TILE, COORDINATE LOCATION OF JOINTS IN SLAB TO ALIGN WITH TILE EXPANSION JOINTS PER ARCH.
4. CENTER CONTINUOUS FOOTINGS ON CMU WALLS UNLESS NOTED OTHERWISE.
5. IN NO CASE SHALL PIPES, CONDUITS, OR SLEEVES BE EMBEDDED IN SPREAD OR CONTINUOUS FOOTINGS OR WITHIN TOP OR BOTTOM THIRD OF GRADE BEAMS UNLESS SPECIFICALLY DETAILED ON STRUCTURAL DRAWINGS. PIPES, CONDUITS OR SLEEVES MAY ONLY BE EMBEDDED WITHIN THE MIDDLE THIRD OF GRADE BEAMS WHERE NOTED ON STRUCTURAL PLANS AND DETAILED IN THE STRUCTURAL DRAWINGS.
6. WHERE CONTINUOUS FOOTINGS and SPREAD FOOTINGS INTERSECT, EXCAVATE TO BOTTOM OF DEEPER FOOTING and CONTINUE ALL BARS THRU INTERSECTION. PLACE BARS AT CONTINUOUS FOOTING CORNERS and INTERSECTIONS PER 05/1-S6.01. WHERE CONTINUOUS FOOTINGS TERMINATE AT SIDES OF GRADE BEAMS OR SPREAD FOOTINGS, EXTEND LONGITUDINAL BARS TO FAR SIDE OF GRADE BEAM OR SPREAD FOOTING and TERMINATE W/ STANDARD 90° HOOK.
7. LOCATE TOP OF SPREAD FOOTINGS and CONTINUOUS FOOTINGS 1'-4" BELOW LOWEST ADJACENT SLAB OR GRADE ELEVATION UNLESS NOTED OTHERWISE.
8. GEOTECHNICAL OBSERVATION / COMPACTION REPORT SHALL BE SUBMITTED TO THE BUILDING INSPECTOR PRIOR TO FOOTING INSPECTION.
9. COORDINATE EXTENT OF CONCRETE PADS SUPPORTING EQUIPMENT WITH MANUFACTURER AND WITH EDGE DISTANCE REQUIREMENTS PER EQUIPMENT ANCHORAGE DETAILS IN 1-S6.9X SERIES.
10. N/A
11. SEE CIVIL DRAWINGS FOR APPROXIMATE LOCATION OF EXISTING UNDERGROUND UTILITIES. PROTECT OR RELOCATE EXISTING UTILITIES AS REQUIRED DURING FOOTING EXCAVATION OR CONSTRUCTION. DO NOT SURCHARGE EXISTING UTILITIES, SEE 01/1-S6.01 FOR ADDITIONAL CLARIFICATION.

LEGEND

- CFX — INDICATES CONT. FOOTING - SEE SCHEDULE ON 1-S2.11
- T.O.F — INDICATES TOP OF FOOTING ELEVATION - IF NO ELEVATION INDICATED, LOCATE TOP OF CONT. OR MAT FOOTING PER NOTE 7
- INDICATES 8" THICK CONCRETE BLOCK SHEAR WALL SOLID GROUTED - FOR REINFORCING and OTHER INFORMATION SEE CMU WALL ELEVATIONS and 1-S6.61
- S------S — INDICATES STEP IN CONTINUOUS FOOTING OR GRADE BEAM - SEE 09/S6.01. LOCATION OF FOOTING STEPS SHOWN ON PLAN IS APPROXIMATE, UNO. LOCATION OF STEPS IS TO BE COORDINATED BY CONTRACTOR WITH UTILITY LOCATIONS and FINISH GRADES.
- INDICATES CHANGE IN ELEVATION AT SLAB ON GRADE - SEE DETAIL 12/1-S6.02 UNLESS DETAILED OTHERWISE
- OR — INDICATES CONCRETE CURB OR HOUSEKEEPING PAD - CONSTRUCT PER 06D/1-S6.01 UNO
- +X'-X" — INDICATES ELEVATION OF TOP OF STRUCTURAL CONCRETE SLAB ON GRADE - SEE ARCHITECTURAL FOR TOC IF NO ELEVATION INDICATED
- INDICATES MEP EQUIPMENT TAG. REFER TO ARCH, MECH, ELECT, PLUMB, ETC FOR EXACT LOCATION OF EQUIPMENT
- FOR FLOOR MOUNTED UNIT ANCHORAGE INF AND CONCRETE PAD REQUIREMENT SEE 01/2-S6.91 UNO
- FOR WALL MOUNTED UNIT CONNECTION INF REFER TO LANDSCAPE, MECHANICAL, ELECTRICAL, PLUMBING, ETC. FOR EXACT LOACTION OF EQUIPMENT. SEE 09/2-S6.94 UNO
- XX# (WALL) — INDICATES MAX EQUIPMENT WEIGHT INCLUDING ALL ACCESSORIES (IN LBS)
- INDICATES WALL MOUNTED UNIT

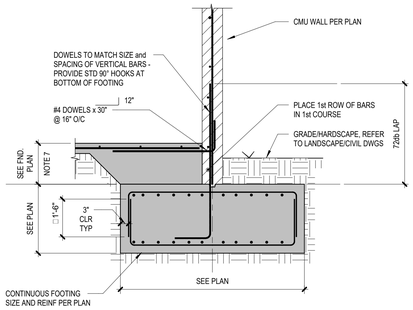
TYPICAL FOUNDATION AND SOG DETAILS



1-S6.01

NOTES:
1. PLACE CONDUITS IN CELLS WITHOUT VERTICAL REINFORCEMENT WHENEVER POSSIBLE.
2. WIRE VERTICAL CONDUIT TO WALL HORIZONTAL BARS, MAINTAIN BARS IN PLACE DURING GROUT POUR.
3. HORIZONTAL CONDUIT ARE NOT PERMITTED.
4. NO ALUMINUM COMPONENTS SHALL BE EMBEDED IN MASONRY CONSTRUCTION.
5. CELLS SHOWN ARE REF ONLY ACTUAL CELL & BLOCK CONFIGURATION MAY VARY.

KEY NOTES:
1. PROVIDE DOWELS AT BOTTOM OF WALL MATCHING SIZE and QUANTITY OF VERTICAL OR JAMB BARS INTO FOUNDATION W/ STD 90° HOOKS AT BOTTOM OF FOOTING - LAP W/ VERTICAL OR JAMB BARS 72 BAR DIAMETERS (db)
2. TYPICAL HORIZONTAL WALL BARS PER WALL REINFORCING SCHEDULE UNLESS OTHERWISE INDICATED ON PLANS OR ELEVATIONS - PROVIDE STD 180° HOOKS IN 8" WALL AT WALL ENDS and OPENINGS ON VERTICAL BAR (PROVIDE "U" BARS PER 04B/- IN 12" WALLS) - LAP HORIZONTAL BARS 48db AT STAGGERED LOCATIONS - NO ATTEMPT IS MADE TO LOCATE HORIZONTAL BAR SPLICE LOCATIONS
3. TYPICAL VERTICAL WALL BARS PER WALL REINFORCING SCHEDULE UNLESS OTHERWISE INDICATED ON PLANS OR ELEVATIONS - LAP VERTICAL BARS AT ELEVATED LEVELS AS SHOWN 72db - ADD DOWELS AT CONCRETE SLAB ON GRADE and ELEVATED CONCRETE LEVELS PER DETAILS INDICATED
4. TYPICAL JAMB BARS - SEE JAMB and LINTEL REINFORCING SCHEDULE UNLESS NOTED OTHERWISE ON PLANS OR ELEVATIONS - EXTEND JAMB BARS 72db ABOVE and BELOW OPENINGS UNLESS SHOWN OTHERWISE (ADD BARS WITH STD 180° HOOK IN 8" WALLS (90° HOOK IN 12" WALLS) AT TOP OF WALL WHERE WALLS TERMINATE ABOVE OPENING) - LAP JAMB BARS AT ELEVATED LEVELS WHERE SHOWN 72 BAR DIAMETERS - FOR TYPICAL SECTION AT JAMB BARS INCLUDING CONFINING TIES SEE 04B/- UNLESS NOTED OTHERWISE
5. TYPICAL LINTEL BARS - SEE JAMB and LINTEL REINFORCING SCHEDULE UNLESS OTHERWISE INDICATED ON PLANS OR ELEVATIONS - SPLICES NOT PERMITTED - EXTEND LINTEL BARS 72db BEYOND OPENINGS UNLESS SHOWN OTHERWISE (PROVIDE STD 180° HOOK IN 8" WALLS (90° HOOK IN 12" WALLS) AT WALL ENDS IF EXTENSION LENGTH BEYOND OPENING CANNOT BE ATTAINED) - FOR TYPICAL SECTION AT LINTEL BARS INCLUDING CONFINING TIES SEE 04A/- UNLESS NOTED OTHERWISE
6. WHERE OPENING JAMBS ABOVE and BELOW MISALIGN BY LESS THAN 16" ACCEPTABLE TO PROVIDE SINGLE ALIGNING JAMB FOR ALL OPENINGS
7. DETERMINE LINTEL BARS BASED ON WIDTH OF LARGER OPENING ABOVE OR BELOW
8. PROVIDE (2) #5 VERTICAL BARS AT WALL ENDS UNLESS NOTED OTHERWISE - LAP VERTICAL BARS AT ELEVATED LEVELS AS SHOWN 72 BAR DIAMETERS
9. IF WALL HEIGHT IS NON-MODULAR OR TOP OF WALL SLOPES, EITHER SAW TOP COURSE OR (IF NOT EXPOSED) FORM TOP COURSE and GROUT SOLIDLY
10. EXTEND JAMB BARS DOWN TO TOP OF OPENING and PROVIDE STD 180° HOOK IN 8" WALLS (90° HOOK IN 12" WALLS)
11. AT TOP OF WALL, PROVIDE (2) HORIZONTAL WALL BARS W/ STD 180° HOOK IN 8" WALLS (90° HOOK IN 12" WALLS) AT WALL ENDS
12. SEE ARCH WALL ELEVATIONS FOR CONTROL JOINT LOCATIONS (MAX 25'-0" O/C UNO)
13. PIER WIDTH "PW" SHALL BE AT LEAST 3 TIMES WALL THICKNESS UNLESS PIER WIDTH and SECTION SHOWN ON WALL ELEVATIONS IN STRUCTURAL DRAWINGS
14. BEAM POCKET PER PLAN (WHERE OCCURS). AT INTERRUPTED CHORD REINFORCING PROVIDE BARS MATCHING SIZE AND QUANTITY OF INTERRUPTED CHORD REINFORCING DIRECTLY BENEATH POCKET CONTINUE 72db BEYOND POCKET EACH END - SEE 09/S1-6.62

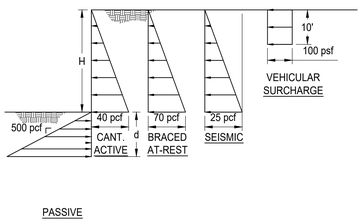
TYP. CMU WALL ELEVATION AND DETAILS

1-S6.61

GENERAL

1. THESE TEMPORARY/PERMANENT SHORING PLANS SHALL BE REVIEWED BY THE PROJECT GEOTECHNICAL ENGINEER PRIOR TO BEGINNING WORK. TEMPORARY SHORING NOT SUBJECT TO THE DIVISION OF THE STATE ARCHITECT (DSA) REVIEW. SEE "NOT FOR DSA REVIEW" NOTE ON APPLICABLE DETAILS, AS MAY OCCUR.
2. CONTRACTOR TO VERIFY ALL DIMENSIONS AND CONDITIONS AT THE SITE.
3. ALL CONSTRUCTION SHALL CONFORM TO REQUIREMENTS OF THE 2022 CALIFORNIA BUILDING CODE.
4. CONTRACTOR SHALL COORDINATE SHORING WITH DRAWINGS OF RECORD TO ENSURE PROVISIONS FOR POCKETS, BLOCKOUTS, OFFSETS, STEPPED FOOTINGS AND ANY OTHER ITEMS AFFECTED BY THE SHORING.
5. ENGINEER HAS NOT BEEN HIRED TO PERFORM ANY SERVICES RELATING TO, OR IN CONNECTION WITH, WATERPROOFING AND DRAINAGE. ENGINEER ASSUMES NO RESPONSIBILITY FOR PROJECT WATERPROOFING AND DRAINAGE DESIGN. IF WATERPROOFING IS TO BE USED ON THE PROJECT, PROPER COORDINATION OF SAID WATERPROOFING IS TO BE DONE BY OTHERS.
6. ENGINEER ASSUMES NO RESPONSIBILITY FOR CONSTRUCTION MEANS AND METHODS.
7. CLIENT AGREES NOT TO USE OR PERMIT ANY OTHER PERSON TO USE PLANS, DRAWINGS, OR OTHER WORK PRODUCT PREPARED BY CEFALI & ASSOCIATES WHICH ARE NOT FINAL AND DO NOT BEAR A SIGNED CEFALI & ASSOCIATES ENGINEER'S STAMP OR SEAL. CLIENT AGREES TO BE LIABLE AND RESPONSIBLE FOR ANY SUCH USE OF NON-FINAL PLANS, DRAWINGS, OR OTHER WORK PRODUCT NOT SIGNED AND STAMPED OR SEALED BY CEFALI & ASSOCIATES AND WAIVES LIABILITY AGAINST CEFALI & ASSOCIATES FOR THEIR USE.
8. HEAVY EQUIPMENT OR CRANES ARE NOT BE LOCATED ADJACENT TO THE SHORING BULKHEAD. NO PROVISIONS FOR EQUIPMENT SURCHARGING HAS BEEN PERMITTED IN THE DESIGN.
9. TEMPORARY BUILDING SHORING IF REQUIRED SHALL BE PROVIDED BY THE CONTRACTOR.
10. NO EXCAVATION OR GRADING SHALL COMMENCE UNTIL 10 DAYS AFTER ADJOINING PROPERTY OWNERS HAVE BEEN NOTIFIED IN WRITING AS REQUIRED BY SECTION 3301.2 OF THE CALIFORNIA BUILDING CODE.
11. ALL MEMBER SIZES SHALL BE AS SHOWN OR EQUAL. AS APPROVED BY CEFALI & ASSOCIATES, EQUIVALENT OR STRONGER MEMBERS MAY BE SUBSTITUTED TO SUIT THE AVAILABILITY OF MATERIALS.



UNDERGROUND STRUCTURES

1. ALL UNDERGROUND UTILITIES OR STRUCTURES REPORTED BY THE OWNER OR OTHERS ARE INDICATED WITH THEIR APPROXIMATE LOCATION AND EXTENT IN THESE DRAWINGS. THE CLIENT BY ACCEPTING THESE PLANS OR PROCEEDING WITH CONSTRUCTION IN ACCORDANCE WITH THESE DRAWINGS AGREES TO ASSUME LIABILITY AND TO HOLD CEFALI & ASSOCIATES HARMLESS FOR ANY DAMAGES RESULTING FROM THE EXISTENCE OF UNDERGROUND UTILITIES OR STRUCTURES NOT REPORTED TO CEFALI & ASSOCIATES.
2. THE OWNER SHALL LOCATE ALL UTILITIES AND STRUCTURES WITHIN THE PROPOSED EXCAVATION AND MAKE APPROPRIATE ARRANGEMENTS FOR THEIR RELOCATION OR PROTECTION, PRIOR TO THE START OF CONSTRUCTION.
3. THE OWNER IN LOCATING ALL EXISTING UTILITIES AND STRUCTURES SHALL INSURE THAT NO CONFLICT EXISTS BETWEEN SHORING PILES AND TIEBACKS AND EXISTING UTILITIES. IF ANY CONFLICT IS FOUND TO EXIST, IT SHALL BE PROMPTLY BROUGHT TO THE ATTENTION OF CEFALI & ASSOCIATES AND CONSTRUCTION SHOULD NOT START UNTIL A RESOLUTION OF THE CONFLICT IS ACCOMPLISHED.
4. THE OWNER SHALL LOCATE AND CAP OFF ALL SEWER LATERALS BEHIND THE PROPOSED LOCATION OF SOLDIER BEAMS PRIOR TO THE INSTALLATION OF SOLDIER BEAMS.
5. AN UNDERGROUND SERVICE ALERT INQUIRY IDENTIFICATION NUMBER (USA II NO.) MUST BE OBTAINED AT LEAST TWO WORKING DAYS BEFORE STARTING WORK WITH THIS PERMIT. TELEPHONE NUMBER 811.

DIGALERT

GEOTECHNICAL DESIGN CRITERIA

1. THESE SHORING WALL PLANS WERE PREPARED WITH CONFORMANCE TO THE GEOTECHNICAL DESIGN RECOMMENDATIONS AS PRESENTED WITHIN THE SOILS REPORT BY VERDANTAS PROJECT NO. 036.25785, DATED MAY 23, 2025.
2. THE GEOTECHNICAL DESIGN VALUES USED ARE AS FOLLOWS:
   - A. EARTH PRESSURES:
     - A.A. ACTIVE: 40 PCF (TRIANGULAR)
     - A.B. AT-REST: 70 PCF (TRIANGULAR)
     - A.C. PASSIVE (PILES): 500 PCF
     - A.D. SEISMIC: 25 PCF (TRIANGULAR)
   - B. PILE FRICTION: 500 PSF
   - C. COEFFICIENT OF FRICTION: 0.3
   - D. LAGGING PRESSURE: DESIGN OR 400 PSF MAX. PRESSURE
   - E. POST-GROUT TIEBACK BOND: 2,000 PSF
   - F. SLIP-PLANE: 30°
   - G. MINIMUM TIEBACK BOND LENGTH: 15 FT
   - H. CUT SLOPES: CALOSH TYPE C SOILS
     1.5: SLOPES

SUBMITTALS

1. THE CONTRACTOR SHALL SUBMIT THE FOLLOWING ITEMS TO THE ENGINEER FOR REVIEW PRIOR TO CONSTRUCTION.
   - 1.1. CONCRETE MIX DESIGN
   - 1.2. CONCRETE CONSTRUCTION JOINT LOCATIONS NOT NOTED ON PLANS
   - 1.3. WALL FACING REINFORCING STEEL PLACING DRAWINGS
   - 1.4. STEEL MILL CERTIFICATION AND COUPON TEST RESULTS
   - 1.5. SHOTCRETE SUBCONTRACTOR QUALIFICATIONS AS OUTLINED IN THE SHOTCRETE PORTION OF THESE NOTES
   - 1.6. WELDING PROCEDURES
   - 1.7. TIEBACK SHOP DRAWINGS
2. THE CONTRACTOR SHALL ALLOW 14 CALENDAR DAYS FOR REVIEW AFTER RECEIVED BY ENGINEER.

CONCRETE

1. ALL CONCRETE CONSTRUCTION SHALL CONFORM WITH CHAPTER 19A OF THE CBC AND TO THE PROVISIONS OF ACI 318, LATEST ADDITION.
2. CONCRETE MIXES SHALL BE DESIGNED BY A QUALIFIED TESTING LABORATORY AND APPROVED BY CEFALI & ASSOCIATES.
3. SLURRY SHALL BE A MIX OF WATER, CEMENT AND SAND; 1-1/2 SACK CEMENT PER YARD OF MIX.
4. DRYPACK SHALL BE A MIX OF WATER, CEMENT AND SAND; 1 PART CEMENT TO 3 PARTS SAND WITH JUST ENOUGH WATER FOR WORKABILITY.
5. PORTLAND CEMENT SHALL CONFORM TO ASTM C150, TYPE V.
6. AGGREGATE FOR HARD ROCK CONCRETE SHALL CONFORM TO ALL REQUIREMENTS AND TESTS OF ASTM C33 AND PROJECT SPECIFICATIONS.
7. ADMIXTURES SHALL CONFORM TO ALL REQUIREMENTS AND TESTS OF ASTM C845, C260, C494, C 1017 OR C618 CLASSES N OR F AND PROJECT SPECIFICATIONS.
8. CONCRETE MIXING OPERATION, ETC. SHALL CONFORM TO ASTM C94.
9. A SPECIAL CONCRETE MIX SHALL BE USED FOR CONCRETE TO BE PLACED BELOW WATER. THE CONCRETE STRENGTH SHALL BE INCREASED BY 1,000 PSI OVER THE INITIAL SPECIFICATION PROVIDED IN THE TABLE BELOW. AN ADMIXTURE THAT REDUCE SEGREGATION OF PASTE/AGGREGATES AND DILUTION OF PASTE SHALL BE INCLUDED. THE ADMIXTURE SHALL BE SUBMITTED TO AND APPROVED BY CEFALI & ASSOCIATES.
10. SCHEDULE OF STRUCTURAL CONCRETE 28-DAY STRENGTH AND TYPES:

LOCATION IN STRUCTURE	STRENGTH (PSI)	DENSITY (PCF)	SLUMP (IN)
SLURRY	N/A	N/A	N/A
SOLDIER PILE TOES	3,000	150	1-4
WALL FACING/SHOTCRETE	5,000	(SEE "SHOTCRETE")	

GROUT - HIGH PRESSURE TIEBACK ANCHORS

1. GROUT IN THE TIEBACK SHAFT SHALL BE A GROUT MIX OF CEMENT AND WATER.
2. CALCIUM CHLORIDE SHALL NOT BE ALLOWED IN THE GROUT.
3. HIGH-PRESSURE GROUT SHALL CONSIST OF: 1-SACK (94 LB.) CEMENT TYPE I, II, III, V CONFORMING TO ASTM C 150 MIXED WITH 4.5-5 GALLONS POTABLE WATER IN ACCORDANCE WITH THE POST TENSION INSTITUTE MANUAL 4TH EDITION.
4. ADMIXTURES SHALL NOT NORMALLY BE USED. ADMIXTURES WHICH CONTROL BLEED, IMPROVE FLOWABILITY REDUCE WATER CONTENT, AND RETARD SET MAY BE USED IN THE GROUT SUBJECT TO THE APPROVAL OF CEFALI & ASSOCIATES AND TESTS THAT VERIFY GROUT AND BOND PROPERTIES ARE NOT ADVERSELY AFFECTED. ADMIXTURES, IF USED, SHALL BE COMPATIBLE WITH THE PRESTRESSING STEEL AND MIXED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS.
5. THE GROUT MIX WILL BE BATCHED ON-SITE, USING A MIXING UNIT, DISCHARGING INTO A HOLDING TANK/AGITATOR UNIT OR DIRECTLY INTO THE PUMP PER THE FOLLOWING PROCEDURE:
   - A. FILL THE MIXING UNIT WITH THE SPECIFIED WATER USING A CALIBRATED MEASURING UNIT AND ADD CEMENT.
   - B. AGITATE THOROUGHLY UNTIL COLLOIDAL MIX IS ACHIEVED.
   - C. DISCHARGE GROUT INTO HOLDING TANK. AGITATE SLOWLY TO PREVENT SEGREGATION.
   - D. PUMP GROUT INTO BOREHOLE IN ACCORDANCE WITH THE TIE-BACK INSTALLATION PROCEDURE.
6. THE GROUTING EQUIPMENT SHALL PRODUCE GROUT FREE OF LUMPS AND INDISPENSED CEMENT. THE GROUTING EQUIPMENT SHALL BE SIZED TO ENABLE THE GROUT TO BE PUMPED IN CONTINUOUS OPERATION. THE MIXER SHALL BE CAPABLE OF CONTINUOUSLY AGITATING THE GROUT

STRUCTURAL STEEL

1. ALL STRUCTURAL STEEL (EXCLUDING PIPES AND PLATES) SHALL CONFORM TO THE REQUIREMENTS OF ASTM A572 GR. 50 OR ASTM A992 SPECIFICATIONS.
2. ALL STRUCTURAL STEEL PIPE SHALL CONFORM TO ASTM A53 GR. B SPECIFICATIONS.
3. ALL STRUCTURAL STEEL PLATE SHALL CONFORM TO ASTM A572 GR 50 SPECIFICATIONS UNLESS OTHERWISE NOTED.
4. ELECTRIC ARC WELDING SHALL UTILIZE ELECTRODES APPROVED BY BUILDING DEPARTMENT (E 70-XX) AND PLACED BY WELDERS PROPERLY CERTIFIED BY THE BUILDING OFFICIAL.

PRESTRESSING STEEL

1. ANCHOR ROD TENDON SYSTEMS SHALL BE DYWIDAG SYSTEMS INTERNATIONAL (DSI) THREADBARS, WILLIAMS THREADBARS, STRESSTEEL (SAS) THREADBARS, OR SKYLINE STEEL THREADED BAR SYSTEMS CONFORMING TO ASTM A722 TYPE 2 SPECIFICATION WITH AN ULTIMATE TENSILE STRENGTH OF 150 KSI. RODS SHALL BE ANCHORED USING PROPRIETARY HEXAGONAL NUTS OR ANCHOR NUTS AND MAY BE SPLICED WITH THE USE OF PROPRIETARY COUPLERS.
2. TENDONS SHALL BE INSTALLED STRAIGHT AND TRUE. KINKING OR SHARP CURVATURE IN ANCHORS UNDER TENSION SHALL BE CAUSE FOR REJECTION.
3. TENDONS SHALL NOT BE WELDED NOR USED FOR GROUNDING WELDING EQUIPMENT.
4. A MINIMUM OF CLASS II CORROSION PROTECTION IS REQUIRED FOR TEMPORARY ANCHORS IN SERVICE LESS THAN OR EQUAL TO 2 YEARS (CBC 1812A.4.1, NOTE 6).

BURIED STEEL MEMBERS CORROSION PROTECTION

1. WHERE MARKED "CORROSION PROTECTED" BURIED STEEL MEMBERS (WF SOLDIER BEAMS AND OTHER ATTACHED STEEL MEMBERS, ANCHOR RODS EXCLUDED, U.N.O.) SURFACES SHALL BE CORROSION PROTECTED WITH TNEMEC INC. PRODUCTS OR EQUAL AS FOLLOWS:
   - A. SHOP APPLIES:
     - A.A. SYSTEM TYPE: ZINC/COAL TAR EPOXY.
     - A.B. MANUFACTURER: TNEMEC COMPANY INC.
     - A.C. SURFACE PREPARATION: ALL SURFACES SHALL BE PREPARED IN ACCORDANCE WITH SSPC-SP10 NEAR WHITE BLAST CLEANING.
     - A.D. PRIME COAT 90-97 TNEME-ZINC AT 2.5 TO 3.5 MILS DFT.
     - A.E. FINISH COAT: 46H-413 TNEME-TAR AT 16.0 TO 20.0 MILS DFT. (APPLIED IN ONE OR TWO COATS).
     - A.F. TOTAL SYSTEM: THE TOTAL DRY FILM THICKNESS SHALL BE 19.0 MILS MINIMUM.
   - B. FIELD TOUCH UP:
     - B.A. SYSTEM TYPE: ZINC/EPOXY.
     - B.B. MANUFACTURER: TNEMEC COMPANY INC.
     - B.C. SURFACE PREPARATION: ALL DAMAGED SURFACES AND WELDS ETC. SHALL BE PREPARED IN ACCORDANCE WITH SSPC-SP10 NEAR WHITE BLAST CLEANING. IF THE AREAS ARE SMALL AND IT IS NOT PRACTICAL OR FEASIBLE TO BE PREPARED IN ACCORDANCE WITH SSPC-SP10, THEN SSPC-SP-11 POWER TOOL CLEAN TO BARE METAL WILL BE ACCEPTABLE.
     - B.D. SPOT PRIME: 94-H20 HYDRO-ZINC AT 2.5 TO 3.5 MILS DFT.
     - B.E. FINISH COAT(S): L69 EXPOXOLINE AT 6.0 TO 8.0 MILS DTF PER COAT (APPLIED IN TWO OR MORE COATS).

CONSTRUCTION JOINTS

1. ALL SURFACES OF CONSTRUCTION JOINTS SHALL BE CLEANED TO REMOVE DUST, CHIPS, OR OTHER FOREIGN MATTER AND ROUGHENED TO 1/4" AMPLITUDE PRIOR TO PLACING THE ADJACENT CONCRETE.
2. IMMEDIATELY BEFORE NEW CONCRETE IS PLACED, ALL CONSTRUCTION JOINT SHALL BE WETTED AND STANDING WATER REMOVED.
3. THE CONTRACTOR SHALL SUBMIT THE PROPOSED LOCATIONS OF CONSTRUCTION JOINTS FOR APPROVAL BY THE STRUCTURAL ENGINEER BEFORE STARTING CONSTRUCTION.

SHORING PROCEDURE

1. IN AREAS WHERE THE FINISHED GRADE OR FINISHED SURFACE IS HIGHER THAN THE EXISTING GRADE, RAISE THE GRADE TO WITHIN FINISHED GRADE. IN AREAS WHERE THE FINISHED GRADE OR FINISHED SURFACE IS LOWER THAN THE EXISTING GRADE, LOWER THE GRADE TO WITHIN FINISHED GRADE.
2. DRILL VERTICAL SOLDIER PILE SHAFTS.
3. PLACE EPOXY-COATED SOLDIER BEAMS IN SHAFT.
4. FILL THE TOE OF THE SOLDIER PILE SHAFT WITH 3000 PSI CONCRETE.
5. FILL BALANCE OF SHAFT WITH A SAND/CEMENT SLURRY.
6. PERFORM ABOVE STEPS FOR BALANCE OF SOLDIER PILES.
7. BEGIN EXCAVATION IN LIFTS AS MAY BE DETERMINED BY THE GRADING INSPECTOR. CLEAN SOLDIER PILES AS REQUIRED. PLACE WOOD LAGGING AS GRADE DESCENDS. PROVIDE SLURRY BEHIND LAGGING FOR FULL BEARING FILLING ALL VOIDS.
8. CONTINUE EXCAVATION TO THE STAGE 1 ELEVATION IN THE CASE OF A TIE-BACK. IN THE CASE OF CANTILEVER PILE, OMIT STAGE 1 AND CONTINUE TO THE BOTTOM OF EXCAVATION.
9. IN THE CASE OF TIED-BACK SOLDIER PILES, DRILL SHAFT FOR TIE-BACK AND INSTALL TENDONS PER THE "TIE-BACK INSTALLATION PROCEDURE" SHOWN.
10. REPEAT STEPS 7 AND 8 FOR THE REST OF THE TIE-BACK LOCATIONS.
11. PROCEED TO THE LEVEL OF THE BOTTOM OF EXCAVATION.
12. TOUCH-UP CORROSION PROTECTION.
13. INSTALL DRAINAGE AND WATERPROOFING.
14. FABRICATE REBAR CURTAIN FOR PERMANENT SHOTCRETE WALL PER THE REINFORCING DETAILS. SHOOT SHOTCRETE WALLS.
15. INSTALL GUARDRAIL SYSTEM ATOP WALLS, WHERE REQUIRED.
16. BRING OVER-EXCAVATED REGIONS TO WITHIN FINISHED GRADE.

SHAFTS

1. VERTICAL AND DIAGONAL SHAFTS ARE TO BE MACHINE DRILLED AND ACCURATELY LOCATED SO THAT SOLDIER PILES AND TIEBACKS ARE IN PROPER RELATION TO THE NEW WALL ALIGNMENT.
2. TOLERANCE FOR INSTALLATION OF SOLDIER PILES IS ±1 INCH FOR VARIATION OF PLAN LOCATION AND 0.5 PERCENT OF PILE LENGTH FOR OUT OF PLUMB.
3. LOCATE SOLDIER PILES AS REQUIRED OUTSIDE OF BUILDING WALLS TO INSURE PILE DOES NOT INTRUDE INTO FINISHED WALL DUE TO OUT OF PLUMB OR VARIATION IN PLAN LOCATION.
4. TIE BACK ANCHORS SHALL BE INSTALLED AT THE ANGLE OF DECLINATION INDICATED IN THE SECTION OR SCHEDULE WITH A TOLERANCE OF ±3 DEGREES.
5. TOLERANCE FOR INSTALLATION OF TIEBACK IN ELEVATION IS ±3 INCH.
6. TIEBACK SHAFTS SHALL BE FREE OF LOOSE MATERIAL AND CONCRETE SHALL BE PLACED IMMEDIATELY AFTER PLACING TENDON IN THE SHAFT.
7. IT WILL NOT BE NECESSARY TO DEWATER THE HOLES FOR SOLDIER PILES OR TIEBACKS SHOULD GROUNDWATER BE ENCOUNTERED PROVIDED THE CONCRETE IS TREMIED INTO POSITION WITH APPROVED DEVICES.
8. SHAFTS CLOSER THAN TWO SHAFT DIAMETERS ON CENTER SHALL BE DRILLED AND POURED IN AN ALTERNATING SEQUENCE SUCH THAT THE ALTERNATE SHAFT IS NOT DRILLED UNTIL THE ADJACENT PILE HAS CURED FOR AT LEAST 24 HOURS.
9. HOLES DRILLED FOR PILES/TIE-BACK ANCHORS SHALL BE DONE WITHOUT DETRIMENTAL LOSS OF GROUND, SLOUGHING OR CAVING OF MATERIALS AND WITHOUT ENDANGERING PREVIOUSLY INSTALLED SHORING MEMBERS OR EXISTING FOUNDATIONS. PROVIDE PROTECTION OF SHAFT AGAINST SLOUGHING OR CAVING, AS REQUIRED.
10. CASING OR OTHER METHODS SHALL BE USED WHERE NECESSARY TO PREVENT LOSS OF GROUND AND COLLAPSE OF THE HOLE.
11. WHERE CAVING OCCURS, DRILLED HOLES SHALL BE CASED AND ALL BACKFILL SHALL BE PRESSURE PUMPED SO THAT ALL VOIDS ARE FILLED.
12. ALL SHAFTS LEFT OPEN MORE THAN TWELVE (12) HOURS SHALL BE CASED.
13. WHEN WATER OVER 3 INCHES IN DEPTH IS PRESENT IN DRILLED PILE HOLES, A CONCRETE MIX WITH A STRENGTH OF 1000 PSI OVER THE DESIGN PSI SHALL BE TREMIED FROM THE BOTTOM UP.
14. DRILLING OF EARTH ANCHOR SHAFTS FOR TIE-BACKS SHALL OCCUR WHEN THE DRILL BENCH REACHES TWO TO THREE FEET BELOW THE LEVEL OF THE TIE-BACK POCKETS.
15. THE DRILL CUTTINGS FROM EARTH ANCHOR SHAFT SHALL BE REMOVED PRIOR TO ANCHOR INSTALLATION.

REINFORCING STEEL

1. ALL REINFORCING BARS SHALL CONFORM TO ASTM A615, GRADE 60, U.N.O. THE DEFORMATIONS SHALL BE IN ACCORDANCE WITH ASTM A305.
2. AT THE TIME CONCRETE IS PLACED, REINFORCEMENT SHALL BE FREE FROM MUD, OIL, OR OTHER NONMETALLIC COATINGS THAT DECREASE BOND. EPOXY-COATING OF REINFORCEMENT SHALL BE PERMITTED. STEEL REINFORCEMENT WITH RUST, MILL SCALE, OR A COMBINATION OF BOTH SHALL BE CONSIDERED SATISFACTORY, PROVIDED THE MINIMUM DIMENSIONS (INCLUDING HEIGHT OF DEFORMATIONS) AND WEIGHT OF A HAND-WIRE-BRUSHED TEST SPECIMEN COMPLY WITH APPLICABLE ASTM SPECIFICATION.
3. REINFORCEMENT SHALL BE ACCURATELY PLACED AND ADEQUATELY SUPPORTED BEFORE CONCRETE IS PLACED, AND SHALL BE SECURED AGAINST DISPLACEMENT WITHIN TOLERANCES.
4. WELDING OF CROSSING BARS SHALL NOT BE PERMITTED FOR ASSEMBLY OF REINFORCEMENT.
5. REINFORCING STEEL SHALL BE DETAILED IN ACCORDANCE WITH THE "A.C.I. MANUAL OF STANDARD PRACTICE FOR DETAILING REINFORCED CONCRETE STRUCTURES", LATEST EDITION.
6. ALL REINFORCING BAR BENDS SHALL BE MADE COLD. ALL DOWEL BENDS SHALL BE MADE PRIOR TO PLACING DOWELS; BARS SHALL NOT BE BENT AFTER ANY PORTION OF THE BAR IS ENCASED IN CONCRETE. MINIMUM BEND DIAMETERS AND STANDARD HOOKS SHALL BE PER ACI 318.
7. REINFORCING BAR SPLICES SHALL BE MADE ONLY AS INDICATED ON THE DRAWINGS. MINIMUM SPLICE LENGTH FOR REINFORCING STEEL BARS IN CONCRETE SHALL BE PER ACI 318. #5 AND LARGER REINFORCING BARS SHALL NOT BE SPLICED EXCEPT AS LOCATED AND DETAILED ON THE DRAWINGS. #4 BARS AND SMALLER WITH LENGTHS NOT SHOWN SHALL BE CONTINUOUS. ALL SPLICE LOCATIONS ARE SUBJECT TO APPROVAL BY STRUCTURAL ENGINEER. PROVIDE CLASS B SPLICE UNLESS NOTED OTHERWISE.
8. ALL BARS SHALL BE MARKED SO THEIR IDENTIFICATION CAN BE MADE WHEN THE FINAL IN-PLACE INSPECTION AND OBSERVATION IS MADE.
9. BARS IN WALL FACING SHALL BE SECURELY SUPPORTED ON WELL CURED CONCRETE BLOCKS OR APPROVED METAL CHAIRS, PRIOR TO PLACING CONCRETE.
10. DRAWINGS SHOW TYPICAL REINFORCING CONDITIONS. COMPLETE AND DETAILED REINFORCING PLACEMENT DRAWINGS SHALL BE PREPARED AND SUBMITTED TO THE FOR APPROVAL BY CEFALI & ASSOCIATES PRIOR TO FABRICATION IN ACCORDANCE WITH THE SPECIFICATIONS AND APPLICABLE CODES. THESE DRAWINGS SHALL BE AVAILABLE ON THE JOB SITE PRIOR TO PLACING OF CONCRETE.
11. REBAR SPACING GIVEN ARE MAXIMUM ON CENTER WHERE STATED AS "O.C.". REBAR IS CONTINUOUS UNLESS NOTED OTHERWISE.
12. CONCRETE PROTECTION FOR CAST-IN-PLACE REINFORCEMENT SHALL BE PROVIDED. THE FOLLOWING MINIMUM CONCRETE COVER SHALL BE PROVIDED:

CAST AGAINST AND PERMANENTLY EXPOSED TO EARTH	3"
EXPOSED TO EARTH OR WEATHER	
NO. 6 THROUGH NO. 18 BARS	2"
NO. 5 BARS AND SMALLER	1½"
NOT EXPOSED TO WEATHER OR IN CONTACT WITH GROUND	1½"

SHOTCRETE

1. SHOTCRETE SHALL COMPLY WITH THE REQUIREMENTS OF THE 2022 CALIFORNIA BUILDING CODE SECTION 1908A.
2. COARSE AGGREGATE, IF USED, SHALL NOT EXCEED 3/4" INCH.
3. THE MINIMUM SLUMP SHALL BE 1-1/2 INCHES AND THE MAXIMUM SLUMP SHALL BE 2-1/2" INCHES. SLUMP SHALL BE MEASURED AT THE POINT OF DISCHARGE FROM THE MIXER, EXCEPT WHEN THE BUILDING INSPECTOR MAY REQUIRE SLUMP TESTS AT THE DISCHARGE POINT WHERE WATER MAY HAVE BEEN ADDED.
4. REINFORCING STEEL SHALL BE SECURELY TIED IN PLACE IN A MANNER THAT PREVENTS ANY MOVEMENT DURING THE WET MIX SHOTCRETING.
5. THE MAXIMUM SIZE OF REINFORCEMENT SHALL BE NO. 5 BARS UNLESS IT IS DEMONSTRATED BY PRECONSTRUCTION TESTS THAT ADEQUATE ENCASEMENT OF LARGER BARS WILL BE ACHIEVED.
6. WHEN NO. 5 OR SMALLER BARS ARE USED, THERE SHALL BE A MINIMUM CLEARANCE BETWEEN PARALLEL REINFORCEMENT BARS OF 2-1/2 INCHES. WHEN BARS LARGER THAN NO. 5 ARE PERMITTED, THERE SHALL BE A MINIMUM CLEARANCE BETWEEN PARALLEL BARS EQUAL TO SIX DIAMETERS OF THE BARS USED. WHEN TWO CURTAINS OF STEEL ARE PROVIDED, THE CURTAIN NEARER THE NOZZLE SHALL HAVE A MINIMUM SPACING EQUAL TO 12 BAR DIAMETERS AND THE REMAINING CURTAIN SHALL HAVE A MINIMUM SPACING OF SIX BAR DIAMETERS. EXCEPTION: SUBJECT TO THE APPROVAL OF THE BUILDING OFFICIAL, REQUIRED CLEARANCES SHALL BE REDUCED WHERE IT IS DEMONSTRATED BY PRECONSTRUCTION TESTS THAT ADEQUATE ENCASEMENT OF THE BARS USED IN THE DESIGN WILL BE ACHIEVED.
7. LAP SPLICES OF REINFORCING BARS SHALL UTILIZE THE NONCONTACT LAP SPLICE METHOD WITH A MINIMUM CLEARANCE OF 2 INCHES BETWEEN BARS. THE USE OF CONTACT LAP SPLICES NECESSARY FOR SUPPORT OF THE REINFORCING IS PERMITTED WHEN APPROVED BY THE BUILDING OFFICIAL, BASED ON SATISFACTORY PRECONSTRUCTION TESTS THAT SHOW THAT ADEQUATE ENCASEMENT OF THE BARS WILL BE ACHIEVED, AND PROVIDED THAT THE SPLICE IS ORIENTED SO THAT A PLANE THROUGH THE CENTER OF THE SPLICED BARS IS PERPENDICULAR TO THE SURFACE OF THE SHOTCRETE.
8. A CAPABLE NOZZLEMAN'S HELPER WITH AN AIR BLOW PIPE SHALL BE PROVIDED TO ASSIST THE NOZZLEMAN IN KEEPING ALL REBOUND BUILD-UP OUT OF THE WORK.
9. ADDITIONAL WORKERS MAY BE REQUIRED TO TAKE THE REBOUND FROM THE WORK IF THE REBOUND CANNOT BE REMOVED BY THE AIR BLOW PIPE.
10. ANY REBOUND OR ACCUMULATED LOOSE AGGREGATE SHALL BE REMOVED FROM THE SURFACES TO BE COVERED PRIOR TO PLACING THE INITIAL OR ANY SUCCEEDING LAYERS OF SHOTCRETE. REBOUND SHALL NOT BE USED AS AGGREGATE.
11. EXCEPT WHERE PERMITTED HEREIN, UNFINISHED WORK SHALL NOT BE ALLOWED TO STAND FOR MORE THAN 30 MINUTES UNLESS EDGES ARE SLOPED TO A THIN EDGE. FOR STRUCTURAL ELEMENTS THAT WILL BE UNDER COMPRESSION AND FOR CONSTRUCTION JOINTS SHOWN ON THE APPROVED CONSTRUCTION DOCUMENTS, SQUARE JOINTS ARE PERMITTED. BEFORE PLACING ADDITIONAL MATERIAL ADJACENT TO PREVIOUSLY APPLIED WORK, SLOPING AND SQUARE EDGES SHALL BE CLEANED AND WETTED.
12. IN-PLACE SHOTCRETE THAT EXHIBITS SAGS, SLOUGHS, SEGREGATION, HONEYCOMBING, SAND POCKETS OR OTHER OBVIOUS DEFECTS SHALL BE REMOVED AND REPLACED. SHOTCRETE ABOVE SAGS AND SLOUGHS SHALL BE REMOVED AND REPLACED WHILE STILL PLASTIC.
13. NO KEYWAYS OR EMBEDMENTS SHALL BE PLACED ON THE FRONT FACE THAT WILL INTERFERE WITH THE STREAM FROM THE NOZZLE. GUARDRAIL SLEEVES ARE PERMITTED AS DETAILED AND THEY SHALL BE VISUALLY INSPECTED TO ENSURE THAT NO VOIDS ARE CREATED AROUND THEM WHEN APPLYING SHOTCRETE.
14. RIGID OR OTHER APPROVED BACKING SHALL BE PLACED AGAINST THE EARTH WHERE THERE IS ANY LIKELIHOOD OF SOIL BEING DISLODGED IN SUFFICIENT QUANTITY TO DAMAGE THE CONCRETE DURING THE APPLICATION OF WET MIX SHOTCRETE. RIGID OR OTHER APPROVED BACKING SHALL BE USED WHERE A VOID IN THE EMBANKMENT IS TO BE BRIDGED.
15. ALL OTHER APPLICABLE REQUIREMENTS OF THE CODE (INCLUDING ALL REQUIREMENTS FOR PNEUMATICALLY PLACED WET MIX MORTAR AND MAXIMUM TIME IN MIXERS) SHALL APPLY.
16. STRENGTH TESTS FOR SHOTCRETE SHALL BE MADE BY AN APPROVED AGENCY IN ACCORDANCE WITH ASTM STANDARDS. STRUCTURAL WET MIX SHOTCRETE SHALL NOT BE PLACED WHERE THE STREAM FROM THE NOZZLE CANNOT DIRECTLY IMPINGE ONTO THE SURFACE WHERE THE CONCRETE IS TO BE PLACED. TWO 16"x16"x12" UNREINFORCED TEST BOXES SHALL BE SHOT FOR EACH SHIFT FOR COMPRESSION STRENGTH TESTING.
17. WHEN REQUIRED BY THE DSA PROJECT INSPECTOR, A TEST PANEL SHALL BE SHOT, CURED, CORED OR SAWN, EXAMINED AND TESTED PRIOR TO COMMENCEMENT OF THE PROJECT. THE SAMPLE PANEL SHALL BE REPRESENTATIVE OF THE PROJECT AND SIMULATE JOB CONDITIONS AS CLOSELY AS POSSIBLE. THE PANEL THICKNESS AND REINFORCING SHALL REPRODUCE THE THICKEST AND MOST CONGESTED AREA SPECIFIED IN THE STRUCTURAL DESIGN. IT SHALL BE SHOT AT THE SAME ANGLE, USING THE SAME NOZZLEMAN AND WITH THE SAME CONCRETE MIX DESIGN THAT WILL BE USED ON THE PROJECT. THE EQUIPMENT USED IN PRECONSTRUCTION TESTING SHALL BE THE SAME TYPE/MANUFACTURER OF EQUIPMENT USED IN THE WORK REQUIRING SUCH TESTING, UNLESS SUBSTITUTE EQUIPMENT IS APPROVED BY THE BUILDING OFFICIAL.

ANCHOR TESTING PROCEDURE

1. EXCEPT FOR THE MODIFICATIONS AS SET FORTH IN SECTIONS 1812A.4.1 THOUGH 1812A.4.3, ALL PRESTRESSED ROCK AND SOIL TIEBACK ANCHORS COMPLY WITH PTI.
2. TESTING OF ANCHORS MAY BE PERFORMED AFTER POST-GROUTING OPERATIONS PROVIDED GROUT HAS REACHED STRENGTH OF 3,000 PSI AS REQUIRED BY PTI SECTION 6.11.
3. EACH ANCHOR SHALL BE SATISFACTORILY TESTED TO THE REQUIREMENTS OF A 150% OR 200% PULL TEST.
4. ALL ANCHORS, WITH THE EXCEPTION OF THE 200% TESTS, SHALL BE TESTED TO 150%. THIS TEST REQUIRES THE ANCHOR TO BE LOADED TO A MINIMUM OF 150% OF THE DESIGN LOAD. THE MOVEMENT OF THE PULLING HEAD INCLUDING THE FREE-STRESSING LENGTH ELONGATION SHALL NOT EXCEED 12 INCHES TOTAL DURING APPLICATION OF THE TEST LOAD FROM 0% TO 150%. AT THE 150% TEST LOAD, THE PULLING HEAD MOVEMENT SHALL NOT EXCEED 0.1 INCH DURING A 15-MINUTE TEST PERIOD.
5. UNLESS OTHERWISE APPROVED BY THE BUILDING OFFICAL ON THE RECOMMENDATION OF THE GEOTECHNICAL ENGINEER, TEN PERCENT OF THE ANCHORS WHERE DIRECTED, SHALL BE TESTED IN ACCORDANCE WITH A 200% TEST. A 200% TEST REQUIRES THE ANCHOR TO BE LOADED TO 200% OF THE DESIGN LOAD. IN ADDITION, A REPRESENTATIVE SAMPLE OF THESE TESTS SHALL BE TESTED FOR A TIME PERIOD OF 24 HOURS. THE GEOTECHNICAL ENGINEER SHALL PREDETERMINE THE LOCATION OF THESE TEST ANCHORS AND EXTRA TENDONS, AS MAY BE REQUIRED, SHALL BE ADDED. THE MOVEMENT OF THE PULLING HEAD INCLUDING THE FREE-STRESSING LENGTH ELONGATION SHALL NOT EXCEED 12 INCHES TOTAL D

MONITORING

1. SHORING PILES SHALL BE SURVEY MONITORED FOR LINE AND GRADE AT THE TOP OF THE SOLDIER PILE.
2. CONTROL POINTS SHALL BE ESTABLISHED OUTSIDE THE AREA OF INFLUENCE OF THE SHORING SYSTEM TO ENSURE THE ACCURACY OF THE MONITORING READINGS.
3. THE PERIODIC BASIS OF SHORING MONITORING, AS A MINIMUM, SHALL BE AS FOLLOWS:
   - 3.1. INITIAL MONITORING SHALL BE PERFORMED PRIOR TO ANY EXCAVATION.
   - 3.2. ONCE EXCAVATION HAS BEGUN, THE PERIODIC READINGS SHALL BE TAKEN WEEKLY UNTIL THE BOTTOM OF EXCAVATION HAS BEEN REACHED.
   - 3.3. IF PERFORMANCE OF THE SHORING IS WITHIN THE LIMITS SET FORTH BELOW AND THERE OCCURS A 3-WEEK PERIOD WHERE THE MOVEMENT IS LESS THAN 0.3 INCHES, THE MONITORING INTERVAL MAY BE INCREASED TO MONTHLY INTERVALS.
   - 3.4. THE PERIODIC MONITORING OF THE SOLDIER PILES CAN BE DISCONTINUED ONCE THE PERMANENT STRUCTURE IS CAPABLE OF RESISTING THE EARTH LOAD AND THIS HAS BEEN CONFIRMED IN WRITING BY THE STRUCTURAL ENGINEER.
   - 3.5. ADDITIONAL READINGS SHALL BE TAKEN WHEN REQUESTED BY CEFALI & ASSOCIATES OR THE GEOTECHNICAL ENGINEER.
   - 3.6. IF THE TOTAL CUMULATIVE HORIZONTAL OR VERTICAL MOVEMENT (FROM START OF CONSTRUCTION) OF EXISTING BUILDINGS REACHES 1/2 INCH OR SOLDIER PILE HORIZONTAL MOVEMENT REACHES 1 INCH ALL EXCAVATION ACTIVITIES IN THE AREA SHALL BE SUSPENDED. THE GEOTECHNICAL AND CEFALI & ASSOCIATES SHALL EXAMINE THE CAUSE OF MOVEMENT, AND RECOMMEND CORRECTIVE MEASURES, IF NECESSARY, BEFORE EXCAVATION CONTINUES. IF THE TOTAL CUMULATIVE HORIZONTAL OR VERTICAL MOVEMENT (FROM START OF CONSTRUCTION) OF THE EXISTING BUILDINGS REACHES 3/4 INCH OR SOLDIER PILE HORIZONTAL MOVEMENT REACHES 1-1/2 INCHES ALL EXCAVATION ACTIVITIES SHALL BE SUSPENDED UNTIL THE CAUSES, IF ANY, CAN BE DETERMINED. SUPPLEMENTAL SHORING SHALL BE DEVISED TO ELIMINATE FURTHER MOVEMENT SHORING BEFORE EXCAVATION CONTINUES.
4. IF IN THE OPINION OF CEFALI & ASSOCIATES, MONITORING DATA INDICATE EXCESSIVE MOVEMENT OR OTHER DISTRESS, ALL EXCAVATION SHALL CEASE UNTIL THE GEOTECHNICAL ENGINEER AND CEFALI & ASSOCIATES INVESTIGATE THE SITUATION AND MAKES RECOMMENDATIONS FOR REMEDIATION OR CONTINUING.
5. MONITORING READING SHALL BE SUBMITTED TO CEFALI & ASSOCIATES AND THE GEOTECHNICAL ENGINEER WITHIN 3 WORKING DAYS AFTER THEY ARE CONDUCTED. MONITORING READINGS SHALL BE ACCURATE TO WITHIN 0.01 FEET. RESULTS ARE TO BE SUBMITTED IN TABULAR FORM SHOWING AT LEAST THE INITIAL DATE OF MONITORING AND READING, CURRENT MONITORING DATE AND READING AND DIFFERENCE BETWEEN THE 2 READINGS. THE READING SHALL INDICATE INWARDS MOVEMENT AS NEGATIVE VALUES AND OUTWARDS MOVEMENT AS POSITIVE. NORTHINGS AND EASTINGS ARE NOT ACCEPTABLE. DOWNWARDS MOVEMENTS SHALL BE NEGATIVE AND UPWARDS MOVEMENT POSITIVE.
6. PRIOR TO CONSTRUCTION, THE CONTRACTOR SHALL COMPLETE A PHOTOGRAPHIC LOG OF ALL ADJACENT PROPERTIES AND STRUCTURES WITHIN A 1:1 OF THE BOTTOM OF EXCAVATION.
   - 6.1. THE CONTRACTOR SHALL DOCUMENT THE EXISTING CONDITIONS OF WALL CRACKS ADJACENT TO SHORING BULKHEADS PRIOR TO START OF CONSTRUCTION.

APPENDIX (OSHPD & DSA) MONITORING

1. SHORING PILES SHALL BE SURVEY MONITORED FOR LINE AND GRADE AT THE TOP OF THE SOLDIER PILE. ADDITIONAL MONITORING POINTS SHALL BE ESTABLISHED AT THE ANCHOR HEADS OF SELECTED SOLDIER PILES AND AT INTERMEDIATE INTERVALS AS CONSIDERED APPROPRIATE BY THE GEOTECHNICAL ENGINEER.
2. CONTROL POINTS SHALL BE ESTABLISHED OUTSIDE THE AREA OF INFLUENCE OF THE SHORING SYSTEM TO ENSURE THE ACCURACY OF THE MONITORING READINGS.
3. THE PERIODIC BASIS OF SHORING MONITORING, AS A MINIMUM, SHALL BE AS FOLLOWS:
   - 3.1. INITIAL MONITORING SHALL BE PERFORMED PRIOR TO ANY EXCAVATION.
   - 3.2. ONCE EXCAVATION HAS BEGUN, THE PERIODIC READINGS SHALL BE TAKEN WEEKLY UNTIL EXCAVATION REACHES THE ESTIMATED SUBGRADE ELEVATION AND THE PERMANENT FOUNDATION IS COMPLETE.
   - 3.3. IF PERFORMANCE OF THE SHORING IS WITHIN ESTABLISHED GUIDELINES, SHORING DESIGN ENGINEER MAY PERMIT THE PERIODIC READINGS TO BE BI-WEEKLY. ONCE INITIATED, BI-WEEKLY READINGS SHALL CONTINUE UNTIL THE BUILDING SLAB AT GROUND FLOOR LEVEL IS COMPLETED AND CAPABLE OF TRANSMITTING LATERAL LOADS TO THE PERMANENT STRUCTURE. THEREAFTER, READINGS CAN BE MONTHLY.
   - 3.4. WHERE THE BUILDING HAS BEEN DESIGNED TO ,RESIST LATERAL EARTH PRESSURES, THE PERIODIC MONITORING OF THE SOLDIER PILES AND ADJACENT STRUCTURE CAN BE DISCONTINUED ONCE THE GROUND FLOOR DIAPHRAGM AND SUBTERRANEAN PORTION OF THE STRUCTURE IS CAPABLE OF RESISTING LATERAL SOIL LOADS AND APPROVED BY THE SHORING DESIGN ENGINEER, GEOTECHNICAL ENGINEER AND BUILDING OFFICIAL.
   - 3.5. ADDITIONAL READINGS SHALL BE TAKEN WHEN REQUESTED BY THE SPECIAL INSPECTOR, CEFALI & ASSOCIATES, GEOTECHNICAL ENGINEER, OR BUILDING OFFICIAL.
4. MONITORING READING SHALL BE SUBMITTED TO CEFALI & ASSOCIATES AND THE BUILDING OFFICIAL WITHIN 3 WORKING DAYS AFTER THEY ARE CONDUCTED. MONITORING READINGS SHALL BE ACCURATE TO WITHIN 0.01 FEET. RESULTS ARE TO BE SUBMITTED IN TABULAR FORM SHOWING AT LEAST THE INITIAL DATE OF MONITORING AND READING, CURRENT MONITORING DATE AND READING AND DIFFERENCE BETWEEN THE 2 READINGS.
5. IF THE TOTAL CUMULATIVE HORIZONTAL OR VERTICAL MOVEMENT (FROM START OF CONSTRUCTION) OF THE EXISTING BUILDINGS REACHES 1/2 INCH OR SOLDIER PILES REACHES 1 INCH ALL EXCAVATION ACTIVITIES SHALL BE SUSPENDED. THE GEOTECHNICAL AND SHORING DESIGN ENGINEER SHALL DETERMINE THE CAUSE OF MOVEMENT, IF ANY, AND RECOMMEND CORRECTIVE MEASURES, IF NECESSARY, BEFORE EXCAVATION CONTINUES. IF THE TOTAL CUMULATIVE HORIZONTAL OR VERTICAL MOVEMENT (FROM START OF CONSTRUCTION) OF THE EXISTING BUILDINGS REACHES 3/4 INCH OR SOLDIER PILES REACHES 1-1/2 INCHES ALL EXCAVATION ACTIVITIES SHALL BE SUSPENDED UNTIL THE CAUSES, IF ANY, CAN BE DETERMINED. SUPPLEMENTAL SHORING SHALL BE DEVISED TO ELIMINATE FURTHER MOVEMENT AND THE BUILDING OFFICIAL SHALL REVIEW AND APPROVE THE SUPPLEMENTAL SHORING BEFORE EXCAVATION CONTINUES.
6. IF IN THE OPINION OF THE BUILDING OFFICIAL CEFALI & ASSOCIATES, MONITORING DATA INDICATE EXCESSIVE MOVEMENT OR OTHER DISTRESS, ALL EXCAVATION SHALL CEASE UNTIL THE GEOTECHNICAL ENGINEER AND SHORING DESIGN ENGINEER INVESTIGATES THE SITUATION AND MAKES RECOMMENDATIONS FOR REMEDIATION OR CONTINUING.
7. THE CONTRACTOR SHALL COMPLETE A WRITTEN AND PHOTOGRAPHIC LOG OF ALL EXISTING STRUCTURES WITHIN 100 FEET OR THREE TIMES DEPTH OF SHORING, PRIOR TO CONSTRUCTION. A LICENSED SURVEYOR SHALL DOCUMENT ALL EXISTING SUBSTANTIAL CRACKS IN ADJACENT EXISTING STRUCTURES.
8. THE CONTRACTOR SHALL DOCUMENT EXISTING CONDITION OF WALL CRACKS ADJACENT TO SHORING WALL PRIOR TO START OF CONSTRUCTION.
9. THE CONTRACTOR SHALL MONITOR EXISTING WALLS FOR MOVEMENT OR CRACKING THAT MAY RESULT FROM ADJACENT SHORING.
10. MONITORING SHALL BE PERFORMED BY A LICENSED SURVEYOR AND SHALL CONSIST OF VERTICAL AND LATERAL MOVEMENT OF THE EXISTING STRUCTURES. PRIOR TO STARTING SHORING INSTALLATION A PRE-CONSTRUCTION MEETING SHALL TAKE PLACE BETWEEN THE CONTRACTOR, CEFALI & ASSOCIATES, SURVEYOR, GEOTECHNICAL ENGINEER, AND THE BUILDING OFFICIAL TO IDENTIFY MONITORING LOCATIONS ON EXISTING BUILDINGS.
11. READING AND MEASUREMENTS SHALL BE SUBMITTED TO THE BUILDING OFFICIAL AND CEFALI & ASSOCIATES.
12. IF EXCESSIVE MOVEMENT OR VISIBLE CRACKING OCCURS, THE CONTRACTOR SHALL STOP WORK AND SHORE/REINFORCE EXCAVATION AND CONTACT CEFALI & ASSOCIATES AND THE BUILDING OFFICIAL.

GENERAL ELECTRICAL NOTES

1. PROVIDE ELECTRICAL INSTALLATION IN ACCORDANCE WITH THE 2014 NATIONAL ELECTRICAL CODE, LOCAL CODES, AND ORDINANCES. COORDINATE WITH UTILITY COMPANIES FURNISHING SERVICES TO INSTALLATION. FULLY COORDINATE THE INSTALLATION OF ALL ELECTRICAL DEVICES WITH THE WORK OF OTHER TRADES.
2. PROVIDE ITEMS NECESSARY TO COMPLETE ELECTRICAL SYSTEMS. THE ELECTRICAL DRAWINGS ARE DIAGRAMMATIC AND DO NOT NECESSARILY SHOW EVERY CONDUIT, BOX, CONDUCTOR OR SIMILAR ITEMS FOR A COMPLETE INSTALLATION.
3. NO CHANGES TO THE INSTALLATION FROM THESE DRAWINGS MAY BE MADE WITHOUT EXPRESS WRITTEN CONSENT OF THE ENGINEER OF RECORD. ANY CHANGES OR MODIFICATIONS MADE WITHOUT CONSENT MAY RESULT IN WORK REMOVED AND INSTALLED ACCORDING TO THE PLANS WITH NO COST TO THE OWNER OR ENGINEER.
4. WHEREVER THE WORD "PROVIDE" IS USED, IT MEANS, "FURNISH AND INSTALL COMPLETE AND READY FOR USE."
5. PROVIDE OVERCURRENT PROTECTION DEVICES PER EQUIPMENT NAMEPLATE UNLESS OTHERWISE INDICATED.
6. PROVIDE CIRCUIT BREAKERS WITH UL LISTED INTERRUPTING RATINGS (RMS SYMMETRICAL AMPERES) GREATER THAN THE AVAILABLE FAULT CURRENT SHOWN ON THE ELECTRICAL ONE-LINE DIAGRAM. WHERE BREAKERS ARE INDICATED TO BE INSTALLED IN EXISTING PANELBOARDS, BREAKER INTERRUPTING RATINGS MUST BE EQUAL TO OR GREATER THAN THE EXISTING PANELBOARD RATING.
7. VERIFY PHYSICAL DIMENSIONS OF EQUIPMENT TO ENSURE THAT N.E.C. REQUIRED CLEARANCES CAN BE MET.
8. PROVIDE A PULLWIRE IN ALL CONDUIT.
9. PROVIDE A PLASTIC BUSHING ON END(S) OF ALL CONDUIT STUBS.
10. MOUNT DISCONNECT SWITCHES FOR MECHANICAL EQUIPMENT WITHIN SIGHT OF THE EQUIPMENT (NOT TO EXCEED 50').
11. CONDUITS PASSING THROUGH BUILDING CONSTRUCTION EXPANSION JOINTS SHALL HAVE APPROVED EXPANSION FITTINGS, PROPERLY BONDED. SEE ARCHITECTURAL FOR LOCATIONS OF EXPANSION JOINTS. SEAL AROUND ALL CONDUIT PENETRATIONS THROUGH WALLS, CEILINGS, AND FLOORS TO MAINTAIN CODE REQUIRED RATINGS.
12. COORDINATE CONNECTIONS OF MECHANICAL EQUIPMENT WITH MECHANICAL AND CONTROLS CONTRACTORS PRIOR TO ROUGH-IN.
13. WHEN CONNECTING NEW OR REPLACEMENT EQUIPMENT TO EXISTING ELECTRICAL FEEDERS, THE CONTRACTOR SHALL CONFIRM THE NUMBER, SIZE, AND INSULATION TYPE OF CONDUCTORS, PANELBOARD, CIRCUIT NUMBER AND TYPE, POLES, AND AMPACITY RATING OF OVERCURRENT PROTECTION DEVICE TO MEET THE REQUIREMENTS OF THE CURRENT EDITION OF THE NATIONAL ELECTRICAL CODE AND THE REQUIREMENTS OF THE EQUIPMENT MANUFACTURER BEFORE CONNECTING TO THE EQUIPMENT.
14. BRANCH CIRCUIT CONNECTIONS ARE SHOWN FOR THE SOLE PURPOSE OF INDICATING ALL OF THE DEVICES THAT ARE TO BE CONNECTED TO A PARTICULAR BRANCH CIRCUIT. CONDUCTOR SIZES AND/OR QUANTITIES ARE NOT INDICATED FOR 20 AND 15 AMP, BRANCH CIRCUITS. CONDUCTOR SIZES AND/OR QUANTITIES ARE ONLY INDICATED WHERE OVERSIZED CONDUCTORS ARE REQUIRED TO MINIMIZE VOLTAGE DROP OR ON BRANCH CIRCUIT CONNECTIONS WHICH ARE NOT FED BY 20 AMP & 15 AMP CIRCUIT BREAKERS. THE ELECTRICAL CONTRACTOR SHALL DETERMINE RACEWAY ROUTING, GROUPING OF BRANCH CIRCUITS FOR HOMERUNS, NUMBERS OF CONDUCTORS REQUIRED AND PLACEMENT OF JUNCTION BOXES. SHOW ACTUAL RACEWAY ROUTING AND CIRCUITING ON RECORD DRAWINGS.
15. GROUND ALL ELECTRICAL DEVICES, MOTORS, METALLIC PIPING, DUCTWORK, METAL FRAMING, REINFORCING STEEL, ETC., IN ACCORDANCE WITH NEC ARTICLE 250. INSTALL A DEDICATED GROUNDING CONDUCTOR FOR ALL SYSTEMS AND DEVICES UNLESS OTHERWISE NOTED. PROVIDE SEPARATE GREEN GROUNDING CONDUCTOR FOR ALL FLEXIBLE EQUIPMENT CONNECTIONS AND ALL EXTERIOR ELECTRICAL DEVICES, SUCH AS POLE MOUNTED LIGHTING, RECEPTACLES, BUILDING MOUNTED LIGHTING, ETC.
16. VERIFY ALL FINAL ROOM NAMES AND NUMBERS WITH OWNER PRIOR TO PREPARING PERMANENT PANEL SCHEDULES.
17. EXPOSED RACEWAYS IN FINISHED SPACES: PAINT ALL CONDUIT AND BOXES INSTALLED TIGHT TO EXPOSED ROOF STRUCTURES TO MATCH ADJACENT FINISHES.
18. ALL DEMOLISHED ELECTRICAL EQUIPMENT, DEVICES, LIGHT FIXTURES, CONDUIT, CABLE, ETC. SHALL BE TURNED OVER TO THE OWNER (AT OWNER'S REQUEST). ALL DEMOLISHED ELECTRICAL EQUIPMENT, DEVICES, LIGHT FIXTURES, CONDUIT, CABLE, ETC NOT REQUESTED TO BE RETAINED BY THE OWNER SHALL BE PROPERLY DISPOSED OF OFF THE SITE.
19. ARC FLASH WARNING LABELS SHALL BE PROVIDED ON NEW ELECTRICAL EQUIPMENT OR ANY EXISTING ELECTRICAL EQUIPMENT THAT IS MODIFIED PER NEC ARTICLE 110.16.

SHEET GENERAL NOTES

1. DC WIRE SHALL BE ATTACHED TO PV RACKS WITH STAINLESS STEEL MOUNTING CLIPS.

SHEET KEYNOTES

1. INSTALL MISSION SOLAR MODULES (MS10-550HT49-550W) FURNISHED BY SCHNEIDER ELECTRIC. REFER TO DETAIL A1/E-501 AND DETAIL C5/E-502 FOR STRING WIRING. REFER TO SCHEDULE ON SHEET E-605.
2. INSTALL 100KW CPS STRING INVERTERS (CPS SCA100KTL-DO/US-480) FURNISHED BY SCHNEIDER ELECTRIC. INVERTER PROVIDED WITH INTEGRAL AC AND DC DISCONNECTING MEANS. REFER TO DETAIL ELEVATION VIEW A3/E-501. REFER TO ONE-LINE DIAGRAM ON SHEET E-601.
3. ANY REQUIRED COMMUNICATIONS RACEWAYS BETWEEN PV ARRAY AND POINT OF INTERCONNECTION SHALL BE INCLUDED ALONGSIDE RACEWAYS FOR POWER.
4. LOCATE PV DISCONNECT OUTDOOR RATED NEMA 3R OUTSIDE ON THE WALL UP LOGAN ELECTRICAL BUILDING,
5. INSTALL (N)STEP UP TRANSFORMER 500KW 480V/12470.
6. INSTALL (N)STEP DOWN TRANSFORMER 500KW 12470V/480.
7. EXISTING MAIN SWITCHBOARD 480V, 2000A INSIDE THE ELECTRICAL ROOM.
8. STRUCTURAL WILL PROVIDE DETAILS TO ADD ON THE DRAWING.

NOT TO SCALE

GENERAL NOTES

1. ALL EQUIPMENT AND CONDUIT CONNECTIONS SHALL BE RAIN TIGHT.
2. REFER TO TABLE ON SHEET E-602 FOR LIST OF SCHNEIDER ELECTRIC-FURNISHED, CONTRACTOR-INSTALLED, EQUIPMENT.
3. SEE INVERTER SCHEDULE ON SHEET E-602 FOR LENGTHS OF INVERTER FEEDERS.

SHEET KEYNOTES

1. SCHNEIDER ELECTRIC TO FURNISH, CONTRACTOR TO INSTALL INVERTERS.
2. INSTALL NEW INVERTER FURNISHED BY SCHNEIDER ELECTRIC. UL1741, UL 1699B, UL 1998 LISTED WITH OVERVOLTAGE PROTECTION. UNIT COMPLIES WITH NEC 690.11 (ARC FAULT PROTECTION).
3. PROVIDE DISTRIBUTION PANEL. REFER TO PANEL SCHEDULE ON E-603 FOR MORE INFORMATION.
4. INSTALL ALSO ENERGY GENERATION MONITORING ENCLOSURE FURNISHED BY SCHNEIDER ELECTRIC WITH THE EQUIPMENT LISTED: PRODUCTION METER, WEATHER STATION AND CPS DATA MANAGER. PROVIDE 480V-240V , 5KVA MINI POWER ZONE FOR ALSO ENERGY MONITORING SYSTEM AND OUTDOOR RATED DUPLEX OUTLET.
5. PROVIDE FUSED DISCONNECT. DISCONNECT TO BE LOCATED WITHIN 15FT OF POINT OF INTERCONNECTION.
6. POINT OF INTERCONNECTION MADE ON LINE SIDE OF SERVICE ENTRANCE CONDUCTORS IN EXISTING MSB. THIS CONNECTION SHALL BE MADE IN CONFORMANCE WITH NEC.THE CONTRACTOR IS RESPONSIBLE FOR UPDATING THE EXISTING SWITCHBOARD (SWBD-MSB-3) AS NEEDED TO ACCOMMODATE THE NEW PV INCOMING POWER CABLE AT THE LINE SIDE OF THE MAIN 2000A BREAKER , AS INDICATED IN SINGLE LINE DIGRAM (SLD).
7. DAS ALSO ENERGY ENCLOSURE WITH CONSUMPTION METER AND DATA LOGGER.
8. UTILITY TO REPLACE EXISTING UTILITY METER WITH NEW BIDIRECTIONAL PRODUCTION METER.
9. EXISTING UTILITY PAD MOUNT TRANSFORMER. EXISTING PRIMARY AND SECONDARY TO REMAIN. 10.120V CONNECTIONS TO METER AND RECEPTACLE AT THE EQUIPMENT RACK 11.MODULES SHALL BE MOUNTED AND SECURED TO RACKING WITH HARDWARE THAT COMPLIES WITH ARTICLE 690.43(A) OF THE 2023 NEC. INCLUDE ALL APPURTENANCES AND/OR FIELD-TESTING REQUIRED TO COMPLY WITH THIS CODE

100 kW, 1500 Vdc/480 Vac String Inverters for North America

CPS SCH100KTL-DO/US-480

The 100 kW high power CPS three-phase string inverters are designed for ground-mount applications with 480 Vac service voltage. The units are high performance, advanced, and reliable inverters designed specifically for the North American environment and grid. High efficiencies, wide operating voltages, broad temperature ranges, and a NEMA Type 4X enclosure enable this inverter platform to operate at high performance across many applications. The CPS 100 kW products ship with the Distributed or Centralized Wire Box, each fully integrated and separable with AC and DC disconnect switches. The Enhanced DC Wire Box includes touch-safe fusing for up to 20 strings. The CPS FlexOM solution enables communication, controls and remote product upgrades.

Key Features

- NFPA 70 and NEC compliant
- Touch-safe DC fuse holders adds convenience and safety
- CPS FlexOM Gateway enables remote firmware upgrades
- Integrated AC and DC disconnect switches
- 1 MPPT with 20 fused inputs for maximum flexibility
- Copper- and aluminum-compatible AC connections
- NEMA Type 4X outdoor rated, tough tested enclosure
- Advanced Smart-Grid features (CA Rule 21 certified)
- kVA headroom yields 100 kW @ 0.95 PF
- Generous DC/AC inverter load ratios
- Separable wire box design for fast service
- Enhanced DC wire boxes available

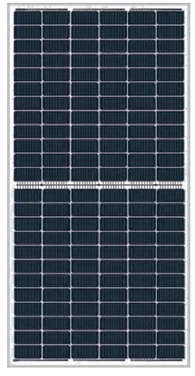
Max. DC input voltage	1500 Vdc
Operating DC input voltage range	750-1450 Vdc
Startup DC input voltage / power	900 Vdc / 200 W
Number of MPP trackers	1
MPPT voltage range @ PF > 0.99[1]	760-1300 Vdc
Max. PV input current (Isc × 1.25)	275 A
Number of DC inputs	Distributed Wire Box: 20 PV source circuits, positive and negative fused Centralized Wire Box: 1 input circuit, 1-2 terminations per pole, non-fused
DC disconnection type	Load-rated DC switch
DC surge protection	Type II MOV (with indicator/remote signaling)
AC Output	
Rated AC output power	100 kW
Max. AC output power[2]	100 kVA (105.3 kVA @ PF > 0.95)
Rated output voltage	480 Vac
Output voltage range[3]	423-528 Vac
Grid connection type[4]	3-Phase / PE / N (neutral optional)
Max. AC output current @ 480 Vac	120.3 A / 126.7 A
Rated output frequency	60 Hz
Output frequency range[3]	57-63 Hz
Power factor	> 0.99 (±0.8 adjustable)
Current THD @ rated load	< 3%
Max. fault current contribution (1 cycle RMS)	41.47 A
Max. OCPD rating	200 A
AC disconnection type	Load-rated AC switch
AC surge protection	Type II MOV (with indicator/remote signaling)
System and Performance	
Topology	Transformerless
Max. efficiency	98.9%
CEC efficiency	98.0%
Standby / night consumption	< 4 W
Environment	
Enclosure protection degree	NEMA Type 4X
Cooling method	Variable speed cooling fans
Operating temperature range	-22°F to 140°F / -30°C to 60°C
Non-operating temperature range[5]	-40°F to 158°F (-40°C to 70°C)
Operating humidity	0-100%
Operating altitude	8202 ft / 2500 m (no derating)
Audible noise	< 65 dBA @ 1 m and 77°F (25°C)
Display and Communication	
User interface and display	LED indicators, Wi-Fi and app
Inverter monitoring	Modbus RS485
Site-level monitoring	CPS FlexOM Gateway (1 per 32 inverters)
Modbus data mapping	SunSpec / CPS
Remote diagnostics / firmware upgrade functions	Standard / (with FlexOM Gateway)
Mechanical	
Dimensions (W × H × D)	Distributed Wire Box: 45.28 × 24.25 × 9.84 in (1150 × 616 × 250 mm) Centralized Wire Box: 39.37 × 24.25 × 9.84 in (1000 × 616 × 250 mm)
Weight	Inverter: 121 lbs (55 kg) Distributed Wire Box: 55 lbs (25 kg) Centralized Wire Box: 33 lbs (15 kg)
Mounting / installation angle	15-90 degrees from horizontal (vertical or angled)
AC termination	M10 stud type terminal [3Ø] (wire range: 1/0 AWG-500 kcmil CU/AL; lugs not supplied) Screw clamp terminal block [N] (#12-1/0 AWG CU/AL)
DC termination	Distributed Wire Box: Screw clamp fuse holder (wire range: #12-#6 AWG CU) Centralized Wire Box: Busbar, M10 bolts (wire range: #1 AWG-500 kcmil CU/AL [1 termination per pole], #1 AWG-300 kcmil CU/AL [2 terminations per pole]; lugs not supplied)
Fused string inputs	Standard/Distributed Wire Boxes: 25 A fuses provided (fuse values up to 30 A acceptable) Enhanced DC Wire Boxes: 20 A fuses provided (fuse values up to 30 A acceptable)
Safety	
Certifications and standards	UL 1741-SA/SB Ed. 3, CSA-C22.2 NO.107.1-01, IEEE 1547-2018, FCC PART15
Selectable grid standard	IEEE 1547a-2014, IEEE 1547-2018, CA Rule 21, ISO-NE
Smart-grid features	Volt-RideThru, Freq-RideThru, Ramp-Rate, Specified-PF, Volt-VAR, Freq-Watt, Vol-Watt
Warranty	
Standard[7]	5 years
Extended terms	10, 15, and 20 years



1) See user manual for information regarding MPPT voltage range when operating at non-unity PF.
2) 100 kW-480 V active power derating begins at 107.6°F (42°C) when PF = ±0.9 and MPPT ≥ Vmin; at 113°F (45°C) when PF=1 and MPPT ≥ Vmin.
3) The "output voltage range" and "output frequency range" may differ according to the specific grid standard.
4) Delta configurations must not be corner-grounded.
5) See user manual for further requirements regarding non-operating conditions.
6) Firmware version 12.0 or later required.

MSI 144HC

MISSION SOLAR ENERGY

550W Positive Power Tolerance

Class leading power output -0 to +3%

FRAME-TO-FRAME WARRANTY

Degradation guaranteed not to exceed 2% in year one and 0.55% annually from years two to 25 with 84.8%.

PERC Cells
Transparent Backsheet

Mission Solar Energy is headquartered in San Antonio, Texas. Our product line is tailored for residential, commercial and utility applications. Every Mission Solar Energy solar module is certified and surpasses industry standard regulations, proving excellent performance over the long term.

Demand the best. Demand Mission Solar Energy.

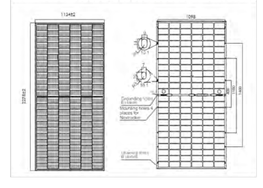
Certified Reliability
- Tested to UL 61730 & IEC Standards
- PID resistant
- Resistance to salt mist corrosion

Advanced Technology
- Half-cut cell with 10 Busbar
- Passivated Emitter Rear Contact
- Ideal for utility applications

Extreme Weather Resilience
- Up to 5,400 Pa front load & 2,400 Pa back load
- Tested load to UL 61730
- Dia. 25mm Hailstone tests at the speed of 24m/s

CERTIFICATIONS

CEC TÜV NORD IEC UL LISTED



UL 61730 / IEC 61215 / IEC 61730

If you have questions or concerns about certification of our products in your area, please contact Mission Solar Energy.

Current-voltage characteristics with dependence on irradiance and module temperature

ELECTRICAL SPECIFICATION

PRODUCT TYPE	MSI10-xxxHT4T (xxx = P_{MAX})			
Power Output	P_{MAX}	W_P	345	350	355
Module Efficiency		%	21.01	21.21	21.39
Tolerance		%	0/+3%	0/+3%	0/+3%
Short Circuit Current		I_{SC}	A	13.92	13.99	14.02
Open Circuit Voltage		V_{OC}	V	49.65	49.80	49.95
Rated Current		I_{MP}	A	13.04	13.11	13.18
Rated Voltage		V_{MP}	V	41.80	41.95	42.09
Fuse Rating			A	30A	30A	30A
System Voltage			V	1,500	1,500	1,500

TEMPERATURE COEFFICIENTS

Normal Operating Cell Temperature (NOCT)	45°C (±2%)
Temperature Coefficient of Pmax	-0.350%/°C
Temperature Coefficient of Voc	-0.270%/°C
Temperature Coefficient of Isc	0.048%/°C

OPERATING CONDITIONS

Maximum System Voltage	1,500Vdc
Operating Temperature Range	-40°F to 185°F (-40°C to +85°C)
Maximum Series Fuse Rating	30A
Fire Safety Classification	UL Type 1
Front & Back Load (UL Standard)	Up to 5,400 Pa snow and 2,400 Pa wind load, Tested to UL 61730
Hail Safety Impact Velocity	25mm at 24 m/s

**Mission Solar Energy uses quality sourced materials that result in a Type 1 fire rating. Please note, the Fire Class Rating is designated for the fully installed PV system, which includes, but is not limited to, the module, the type of mounting used, pitch and roof composition.*

MECHANICAL DATA

Solar Cells	PERC, 182mm x 91mm, 144 (6x24)
Cell Orientation	144 half-cut cells
Module Dimension	2278(±2mm) x 1135(±2mm) x 35(±1mm)
Weight	60.0 lbs. (27.2kg)
Glass	Single glass, 3.2mm AR coated tempered glass
Frame	35mm Anodized
Junction Box	Protection class IP68 with 3 bypass-diodes
Cable	1.2m, wire 4mm2 (12AMG)
Connector	MC4 EVO2

CERTIFICATIONS AND TESTS

Terrasmart Combiners are used for DC aggregation before the input of an inverter or charge controller. They provide a convenient location for O&M and disconnecting means. Combiners are highly configurable to fit any application.

Product features

- Listed to UL-1741
- Up to 36 input circuits
- Rated for 1000 or 1500 VDC
- 275, 320, 400, and 600 Amp load break disconnects
- 75/90C Al/Cu output terminals
- NEMA-3R, 4 & 4X enclosures
- Rated for continuous duty

Available options

- Mechanical lugs
- Provisions for compression lugs
- Isolating / grounded / floating configurations
- Touch safe protective cover
- Custom layouts
- Pre-terminated input conductors
- 10kA SCCR and greater
- Battery and energy storage
- Transient surge suppression
- Breather and drain vents
- Pad-lockable enclosures
- Lockout / tagout provision

Floating Disconnect Combiner, 1500VDC, 275A disconnect, 15 input circuits, transient surge protection, NEMA-4X fiberglass enclosure

Specifications

Voltage (Vdc)	1000 / 1500
Disconnect Ampacity	None / 275 / 320 / 400 / 600
Number of Input Circuits	1 to 36
Input Conductor Size (AWG)	#14 - 8 / #12-4
Fuse Size (Amps)	4 to 32 / 35 to 65
Number of Output Conductors Per Polarity	1 or 2
Output Conductor Size Range (MCM)	#6-350 / #2-600 / 300-800
Enclosure Dimensions (Inches)*	24×24×8 / 30×24×8 / 30×30×8
Enclosure NEMA Ratings	3R / 4 / 4X

*Other options available upon request. Please note dimensions and weight may vary for any custom solutions. Contact us for details.

GLIDE Fuse is a fixed-tilt ground mount system specially designed to increase the ground coverage ratio (GCR) of a potential solar project. The system is the ideal intersection of efficiency and affordability when aiming to maximize the amount of PV deployed on a given project site.

Efficient Design

- The low tilt and low module clearance height allow for reduced row spacing, increasing the amount of PV modules inside a given boundary.
- Streamlined design utilizes a lower part count and simplified connectors, reducing production and installation time.
- Long-table hybrid design is specifically designed to accommodate the specific string size of a project, reducing eBOS costs.
- Low module clearance allows for easier access behind each row, simplifying eBOS installation.

Seamless Installation

- Tabled design makes staging and installing materials more efficient.
- More robust purlin allows for wider foundation spacing than a standard fixed-tilt ground mount system.
- Brackets are designed for specific tilt angles, allowing for the system to square up more efficiently during installation.
- Simplified connectors make for little to no cost to maintain the system after installation.

Specifications

Wind Loads	Up to 150 mph
Snow Loads	Up to 20 psf
Tilt Angles	7.5, 10, and 12.5 degree options
Module Clearance	Maximum clearance height of 24"
Pre-Assembled Parts	Reduced installation time
Warranty	20 years
Module Configuration	4-high portrait or 8-high landscape
Raised Purlin	Integrated bonding and grounding
Listing	UL 2703

When EPCs and developers need a dependable, low-maintenance fixed-tilt ground mount system, they turn to GLIDE Wave. With over 5 GW of projects deployed across the U.S., our flexible design can be adapted to meet the project specific needs on any site, no matter the challenges.

Value Engineered

- Multiple foundation types are available to meet any unique underground soil conditions.
- Arrays are designed using continuous rows to follow the existing terrain and minimize the number of foundations required.
- Raised purlin are utilized as an integrated bonding and grounding method, which is UL 2703 listed, eliminating the need for additional grounding clips or washers.
- Parts and components are domestically sourced and manufactured for faster turnaround times.

Efficient Installation

- Pre-assembled parts and components reduce the number of connections needed at each table/bay by up to 50%.
- Components are designed with adjustable tolerances to make field installation a smoother process.
- Dedicated project management and in-house installation teams capable of completing full structural installation of an array.
- Integrated wire management and equipment posts available to simplify eBOS installation.

Specifications

Wind Loads	170 mph+
Snow Loads	90 psf+
Pre-Assembled Parts	Reduced installation time
Slope	Accomodates up to 30%
Warranty	20 years
Post Type	Cee posts or I-beam options available
Module Configuration	Portrait or landscape (all module frame types)
Raised Purlin	Integrated bonding and grounding
Listing	UL 2703

GENERAL EROSION AND SEDIMENT CONTROL NOTES

1. CONTRACTOR SHALL ENSURE THAT THE CONSTRUCTION SITE IS PREPARED PRIOR TO THE START OF CONSTRUCTION. CONTRACTOR SHALL HAVE ALL EROSION AND SEDIMENT CONTROL MEASURES IN PLACE AT ALL TIMES DURING CONSTRUCTION.
2. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE MAINTAINED UNTIL DISTURBED AREAS ARE STABILIZED.
3. THIS PLAN MAY NOT COVER ALL THE SITUATIONS THAT ARISE DURING CONSTRUCTION DUE TO UNANTICIPATED FIELD CONDITIONS.
4. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE CHECKED BEFORE AND AFTER ALL STORMS TO ENSURE MEASURES ARE FUNCTIONING PROPERLY.
5. CONTRACTOR SHALL MAINTAIN A LOG AT THE SITE OF ALL INSPECTIONS OR MAINTENANCE OF BMPS, AS WELL AS, ANY CORRECTIVE CHANGES TO THE BMPS OR EROSION AND SEDIMENT CONTROL PLAN.
6. IN AREAS WHERE SOIL IS EXPOSED, PROMPT REPLANTING WITH NATIVE COMPATIBLE, DROUGHT-RESISTANT VEGETATION SHALL BE PERFORMED. NO AREAS WILL BE LEFT EXPOSED OVER THE WINTER SEASON.
7. THE CONTRACTOR SHALL INSTALL THE STABILIZED CONSTRUCTION ENTRANCE PRIOR TO COMMENCEMENT OF GRADING. LOCATION OF THE ENTRANCE MAY BE ADJUSTED BY THE CONTRACTOR TO FACILITATE GRADING OPERATIONS. ALL CONSTRUCTION TRAFFIC ENTERING THE PAVED ROAD MUST CROSS THE STABILIZED CONSTRUCTION ENTRANCE.
8. ALL SEDIMENT DEPOSITED ON PAVED ROADWAYS SHALL BE SWEPT AT THE END OF EACH WORKING DAY OR MORE OFTEN AS NECESSARY.
9. CONTRACTOR SHALL PLACE GRAVEL/SAND BAGS AROUND ALL NEW DRAINAGE STRUCTURE OPENINGS IMMEDIATELY AFTER THE STRUCTURE OPENING IS CONSTRUCTED. THESE GRAVEL/SAND BAGS SHALL BE MAINTAINED AND REMAIN IN PLACE UNTIL CONSTRUCTION IS COMPLETED.
10. CONTRACTOR SHALL IMPLEMENT HOUSEKEEPING PRACTICES AS FOLLOWS:
    A. SOLID WASTE MANAGEMENT: PROVIDE DESIGNATED WASTE COLLECTION AREAS AND CONTAINERS. ARRANGE FOR REGULAR REMOVAL AND DISPOSAL. CLEAR SITE OF TRASH INCLUDING ORGANIC DEBRIS, PACKAGING MATERIALS, SCRAP OR SURPLUS BUILDING MATERIALS AND DOMESTIC WASTE DAILY.
    B. MATERIAL DELIVERY AND STORAGE: PROVIDE A DESIGNATED MATERIAL STORAGE AREA WITH SECONDARY CONTAINMENT SUCH AS BERMING. STORE MATERIAL ON PALLETS AND PROVIDE COVERING FOR SOLUBLE MATERIALS. RELOCATE STORAGE AREA INTO BUILDING SHELL WHEN POSSIBLE. INSPECT AREA WEEKLY.
    C. CONCRETE WASTE: PROVIDE A DESIGNATED AREA FOR A TEMPORARY PIT TO BE USED FOR CONCRETE TRUCK WASH-OUT. CONCRETE WASHOUT CANNOT BE WITHIN 50' MINIMUM OF DRAIN INLETS. DISPOSE OF HARDENED CONCRETE OFFSITE. AT NO TIME SHALL A CONCRETE TRUCK DUMP ITS WASTE AND CLEAN ITS TRUCK INTO THE STORM DRAINS VIA CURB AND GUTTER. INSPECT DAILY TO CONTROL RUNOFF, AND WEEKLY FOR REMOVAL OF HARDENED CONCRETE.
    D. PAINT AND PAINTING SUPPLIES: PROVIDE INSTRUCTION TO EMPLOYEES AND SUBCONTRACTORS REGARDING REDUCTION OF POLLUTANTS INCLUDING MATERIAL STORAGE, USE, AND CLEAN UP. INSPECT SITE WEEKLY FOR EVIDENCE OF IMPROPER DISPOSAL.
    E. VEHICLE FUELING, MAINTENANCE AND CLEANING: PROVIDE A DESIGNATED FUELING AREA WITH SECONDARY CONTAINMENT SUCH AS BERMING. DO NOT ALLOW MOBILE FUELING OF EQUIPMENT. PROVIDE EQUIPMENT WITH DRIP PANS. RESTRICT ONSITE MAINTENANCE AND CLEANING OF EQUIPMENT TO A MINIMUM. INSPECT AREA WEEKLY.
    F. HAZARDOUS WASTE MANAGEMENT: PREVENT THE DISCHARGE OF POLLUTANTS FROM HAZARDOUS WASTES TO THE DRAINAGE SYSTEM THROUGH PROPER MATERIAL USE, WASTE DISPOSAL AND TRAINING OF EMPLOYEES. HAZARDOUS WASTE PRODUCTS COMMONLY FOUND ON-SITE INCLUDE BUT ARE NOT LIMITED TO PAINTS & SOLVENTS, PETROLEUM PRODUCTS, FERTILIZERS, HERBICIDES & PESTICIDES, SOIL STABILIZERS, STABILIZATION PRODUCTS, ASPHALT PRODUCTS AND CONCRETE CURING PRODUCTS.
11. CONTRACTOR SHALL HYDROSEED ALL GRADED SLOPES. NATIVE SEED MIX SHALL BE 20% LANA PUBESCENT WHEAT GRASS, 40% BLANDO BROME, AND 40% ANNUAL RYE GRASS AND SHALL BE APPLIED AT A RATE OF 200 POUNDS PER ACRE. SOIL BINDING AGENT SHALL BE VERDYOL, SENTINEL, OR EQUAL, APPLIED AT A RATE OF 110 POUNDS PER ACRE. MULCH SHALL BE SILVER-FIBER, CONWED, OR EQUAL, APPLIED AT A RATE OF 1,000 POUNDS PER ACRE. FERTILIZER SHALL BE AGRI-FORM 16-7-12, BEST 16-6-8, OR EQUAL, APPLIED AT A RATE OF 500 POUNDS PER ACRE. THE CONTRACTOR SHALL WATER SEEDED AREAS OR RESEED AS NECESSARY TO ENSURE SUFFICIENT PLANT DEVELOPMENT FOR EROSION CONTROL.
12. NO GRADING SHALL BE DONE UNTIL SITE- AND SEASON-SPECIFIC SOIL LOSS AND HOUSEKEEPING STORMWATER BMPs HAVE BEEN APPROVED BY THE INSPECTOR. THE CONTRACTOR SHOULD EMPLOY THE DESIGN BMPs AND ANY OTHERS NEEDED AS SITUATIONS ARISE. CONTRACTOR SHOULD CONDUCT SITE INSPECTIONS BEFORE, DURING AND AFTER EACH EXTENDED STORM EVENT TO IDENTIFY CONDITIONS THAT MAY CONTRIBUTE TO EROSION AND SEDIMENT PROBLEMS OR ANY OTHER POLLUTANT DISCHARGES. IF ADDITIONAL CONTROL MEASURES ARE NEEDED, CONTRACTOR SHOULD IMPLEMENT THEM IMMEDIATELY.

POLLUTION PREVENTION NOTES

IN ORDER TO MEET THE REQUIREMENTS OF THE NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PROGRAM FOR CONSTRUCTION, CONSTRUCTION CONTRACTORS SHALL INSTALL AND MAINTAIN APPROPRIATE BEST MANAGEMENT PRACTICES (BMPS), AS SHOWN IN THE EROSION CONTROL PLAN AND IN ACCORDANCE WITH THE SWPPP (STORM WATER POLLUTION PREVENTION PLAN), ON ALL CONSTRUCTION PROJECTS. BMPS SHALL BE INSTALLED IN ACCORDANCE WITH INDUSTRY RECOMMENDED STANDARDS, AND/OR IN ACCORDANCE WITH ANY GENERAL CONSTRUCTION PERMIT ISSUED BY THE STATE FOR THE PROJECT TO PREVENT ANY DISCHARGES FROM THE PROJECT SITE OR INTO ANY STORM DRAIN FACILITIES. ALL SEDIMENTS, CONSTRUCTION MATERIALS, DEBRIS AND WASTES, AND OTHER POLLUTANTS MUST BE RETAINED ON SITE AND MAY NOT BE TRANSPORTED FROM THE SITE VIA SHEET FLOW, SWALES, AREA DRAINS, NATURAL DRAINAGE COURSES, WIND, OR VEHICLE TRACKING. UNDER DIRECTION OF THE ENGINEER OF RECORD, EROSION AND/OR SEDIMENT CONTROL DEVICES SHALL BE MODIFIED AS NEEDED AS THE PROJECT PROGRESSES TO ENSURE EFFECTIVENESS.

BMP MAINTENANCE NOTES

1. FOLLOWING OWNER ACCEPTANCE OF CONSTRUCTION WORK, POST CONSTRUCTION BEST MANAGEMENT PRACTICE (BMP) MEASURES SHALL BE MAINTAINED BY THE PROPERTY OWNER, INCLUDING BUT NOT LIMITED TO:
    1.1. ANNUAL INSPECTION, REPLACEMENT, AND/OR SEDIMENTATION REMOVAL OF VEGETATED SWALES, TREATMENT PONDS, AND OTHER SURFACE STORMWATER TREATMENT MEASURES AS REQUIRED WITH AN INCREASED FREQUENCY BASED ON SITE CONDITIONS.
    1.2. MAINTENANCE SERVICE AGREEMENT(S) OF STORMWATER TREATMENT VAULTS, INLETS, MANHOLES, AND OTHER DEVICES BASED ON MANUFACTURES' RECOMMENDATIONS AND FREQUENCY.
    1.3. ANNUAL INSPECTION OF PERMEABLE PAVEMENT AND REMOVAL OF SEDIMENT AS NEEDED.
    1.4. ANNUAL INSPECTION OF STORMWATER INLETS AND MAINTENANCE AS REQUIRED TO CLEAR GRATES AND INLETS OF DEBRIS.
    1.5. THE PROJECT STORMWATER POLLUTION PREVENTION PLAN (SWPPP) AND WATER QUALITY MANAGEMENT PLAN (WQMP) MAY CONTAIN ADDITIONAL OR MORE STRINGENT MAINTENANCE REQUIREMENTS.
2. BMP DETAILS MAY BE FOUND IN APPENDIX H OF THE PROJECT SWPPP DOCUMENT. BMP DETAILS PER CALIFORNIA STORMWATER QUALITY ASSOCIATION (CASQA) AND ARE AVAILABLE AT www.casqa.org.
3. FOR PROJECTS GREATER THAN 1 ACRE: THE CONTRACTOR SHALL VERIFY THE STATUS OF THE SWPPP/NOI/WDID PRIOR TO EARTHMOVING ACTIVITIES. A STORMWATER POLLUTION PREVENTION PLAN (SWPPP) SHALL BE PREPARED AND A NOTICE OF INTENT (NOI) SHALL BE FILED WITH THE STATE WATER RESOURCES CONTROL BOARD (SWRCB) IN ACCORDANCE WITH THE REQUIREMENTS OF CALIFORNIA GENERAL PERMIT FOR STORMWATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY (PERMIT NO. CAS000002) FOR ALL OPERATIONS ASSOCIATED WITH THESE PLANS. THE CONTRACTOR SHALL KEEP A COPY OF THE SWPPP ON SITE AND AVAILABLE FOR REVIEW.

AREA SUMMARY

TOTAL DISTURBED AREA = 0.03± ACRES

DEMOLITION NOTES

1. THE INTENT OF THE DEMOLITION PLAN IS TO DESCRIBE IN GENERAL THE DEMOLITION AREAS AFFECTED BY THE PROJECT CONSTRUCTION. IT IS NOT INTENDED AS A DETAILED DESCRIPTION OF EXISTING ITEMS OR ELEMENTS TO BE REMOVED. THE CONTRACTOR SHALL VISIT THE SITE AND REVIEW ANY AVAILABLE RECORD DOCUMENTS TO BECOME FAMILIAR WITH THE EXISTING CONDITIONS AND SHOULD INCLUDE THE REMOVAL OF ALL ITEMS NECESSARY FOR THE PROPER EXECUTION AND COMPLETION OF THE WORK. THE CONTRACT DOCUMENTS ARE COMPLEMENTARY, AND WHAT IS REQUIRED BY ONE SHALL BE BINDING AS IF REQUIRED BY ALL TO THE EXTENT THAT IT IS REASONABLY INFERABLE FROM THEM AS BEING NECESSARY TO PRODUCE THE INTENDED RESULTS.
2. REMOVE EXISTING BUILDINGS, FOUNDATIONS AND SERVICE UTILITIES AS INDICATED ON PLANS. CAP ALL UTILITIES AT APPROPRIATE POINTS. ALL EXISTING ELECTRICAL / TELEPHONE / CATV UTILITIES SHALL BE REMOVED AS INDICATED OR BACK TO THE POINT WHERE THE SPECIFIC UTILITY SYSTEM ENTERS THE WORK AREA. COORDINATE DEMOLITION OF ALL UTILITIES WITH THE OWNER. ALL UTILITIES CONNECTED TO EXISTING BUILDINGS TO REMAIN SHALL CONTINUE TO BE OPERATIONAL DURING THE DEMOLITION PROCESS. DOMESTIC AND FIRE SERVICE WATER AND NATURAL GAS SHALL BE REMOVED TO A POINT OUTSIDE THE PERIMETER OF PROPOSED NEW CONSTRUCTION TO EXISTING VALVES OR SIMILAR SHUT-OFF DEVICES. IF A SHUT-OFF DEVICE IS NOT REASONABLY ADJACENT TO THE PERIMETER OF THE PROPOSED NEW CONSTRUCTION, PROVIDE A SHUT-OFF DEVICE IN BELOW-GRADE YARD BOX. CONFIRM LOCATION OF NEW DEVICES WITH OWNER PRIOR TO INSTALLATION. SANITARY SEWER AND STORM DRAINAGE SHALL BE CAPPED TO A POINT OUTSIDE THE PERIMETER OF THE PROPOSED NEW CONSTRUCTION. OTHER UTILITIES NOT SPECIFICALLY IDENTIFIED IN THESE DOCUMENTS AND NOT ANTICIPATED FOR REUSE SHALL BE REMOVED IN ENTIRETY.
3. FOR ALL EXISTING MATERIALS THAT CAN BE SALVAGED, OWNER HAS FIRST RIGHT OF REFUSAL FOR REMOVED ITEMS THAT MAY HAVE RESIDUAL COMMERCIAL OR HISTORIC VALUE INCLUDING HARDWARE, GLASS, CORNER STONES, TIME CAPSULES, LIGHT STANDARDS, SIGNS, FENCING, BENCHES, WATER FOUNTAINS, TRASH CONTAINERS, ETC. SHALL REMAIN AS PROPERTY OF THE OWNER. ALL ITEMS TO BE SALVAGED FOR REUSE/REINSTALLATION MUST MEET CURRENT CODE REQUIREMENTS. COORDINATE ITEMS TO BE RETAINED WITH OWNER AND REMOVE FROM CONSTRUCTION SITE TO A LOCATION APPROVED BY OWNER. REMOVED MATERIALS, NOT INDICATED OR DIRECTED TO BE SALVAGED FOR THE OWNER'S BENEFIT ARE DEBRIS AND BECOME THE CONTRACTOR'S PROPERTY UPON REMOVAL.
4. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THESE PLANS ARE OBTAINED BY SEARCH OF THE AVAILABLE RECORDS AND FIELD SURVEYS. THE CONTRACTOR SHALL CONTACT UNDERGROUND SERVICE ALERT, UTILITY COMPANIES, AND/OR FIELD VERIFY AND LOCATE ALL UTILITIES BEFORE PROCEEDING WITH WORK. THE CONTRACTOR IS ALSO REQUIRED TO TAKE DUE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN AND ANY OTHER LINES NOT OF RECORD OR NOT SHOWN ON THESE PLANS. NOTIFY THE ENGINEER IF ADDITIONAL UTILITIES ARE LOCATED OR IF CONFLICTS ARE FOUND WITH EXISTING CONDITIONS.
5. ALL TREES TO BE REMOVED SHALL BE MARKED BY CONTRACTOR AND APPROVED FOR REMOVAL BY THE OWNER OR OWNER'S REPRESENTATIVE PRIOR TO REMOVING OR CUTTING TREE(S). EXISTING ROOTS SHALL BE GRINDED TO A DEPTH OF APPROXIMATELY 3-FEET. USE CAUTION WHILE GRINDING WHEN EXISTING UTILITIES ARE IN CLOSE PROXIMITY TO TREES. ALL TREES TO REMAIN WITHIN THE LIMIT OF WORK SHALL BE PROTECTED AND MAINTAINED PER SPECIFICATIONS AND DETAILS.
6. SAWCUT EXISTING CONCRETE AND ASPHALT TO AN EXISTING CONTROL JOINT WHERE POSSIBLE, AT MINIMUM TO A NEAT-STRAIGHT LINE. ALL DEBRIS SHALL BE HAULED OFFSITE TO A LEGAL DUMPING SITE OR SALVAGED FOR REUSE ON PROJECT AS NOTED.
7. WORK WITHIN CITY, COUNTY, OR STATE RIGHT-OF-WAY REQUIRES A SEPARATE ENCROACHMENT PERMIT WHICH THE CONTRACTOR IS RESPONSIBLE FOR OBTAINING PRIOR TO STARTING WORK WITHIN RIGHT-OF-WAY.
8. CONTRACTOR TO COORDINATE UTILITY DEMOLITION WITH DRAINAGE AND UTILITY WORK SHOWN IN THIS PLAN SET. ALL UTILITY SHUTDOWNS SHALL BE COORDINATED PER PROJECT SPECIFICATIONS.
9. EXISTING DRY UTILITIES SHOWN FOR DEMOLITION ARE SHOWN FOR COORDINATION ONLY. REFER TO OTHER DISCIPLINES FOR LIMITS AND DETAILS OF DEMOLITION.
10. THE CONTRACTOR SHALL RECYCLE CONSTRUCTION DEBRIS, ASPHALT, AND CONCRETE GENERATED FROM REMOVALS REQUIRED TO CONSTRUCT THE PROJECT. THE CONTRACTOR IS OBLIGATED, UNDER THIS CONTRACT, TO RECYCLE THE WASTE MATERIAL THROUGH AN APPROVED RECYCLING PLANT.
11. A LIST OF FACILITIES THAT ACCEPT CONSTRUCTION & DEMOLITION DEBRIS CAN BE FOUND ON THE CALRECYCLE WEBSITE AT: HTTPS://WWW.CALRECYCLE.CA.GOV/CONDEMO
12. CONTRACTOR IS RESPONSIBLE FOR PROTECTING EXISTING BUILDING FINISHES DURING DEMOLITION. ANY FINISH THAT IS DAMAGED DURING DEMOLITION SHALL BE REPAIRED OR REPLACED IN-KIND OR BETTER.

GENERAL NOTES TO CONTRACTOR

1. THE CONTRACTOR SHALL CONTACT THE RESPECTIVE UTILITY OWNERS FOR LOCATION, REMOVAL, AND/OR RELOCATION OF ANY UTILITY SERVICES AFFECTED BY CONSTRUCTION. THE CONTRACTOR SHALL TAKE ALL NECESSARY PRECAUTIONARY MEASURES TO PROTECT UNDERGROUND OR OVERHEAD STRUCTURES WHETHER OR NOT THEY ARE SHOWN ON THESE DRAWINGS.
2. THE CONTRACTOR SHALL NOTIFY THE PROJECT INSPECTOR AND THE RESPECTIVE UTILITY OWNERS AND OTHER AGENCIES AT LEAST TWO WORKING DAYS PRIOR TO START OF CONSTRUCTION.
3. THE CONTRACTOR SHALL BE RESPONSIBLE FOR EXPOSING, VERIFYING LOCATIONS (BOTH HORIZONTAL AND VERTICAL), AND MAINTAINING ALL EXISTING UNDERGROUND UTILITIES, BOTH SHOWN ON THE PLANS AND/OR NOT SHOWN ON THE PLANS DURING CONSTRUCTION. REPAIR DAMAGED UTILITIES TO THE SATISFACTION OF THE ENGINEER. THE CONTRACTOR SHALL LOCATE EXISTING UNDERGROUND UTILITIES SUFFICIENTLY AHEAD OF CONSTRUCTION TO PERMIT REVISIONS TO PLANS BECAUSE OF LOCATIONS OF EXISTING FACILITIES AND SHALL REPORT ALL DISCREPANCIES TO THE ENGINEER PRIOR TO THE COMMENCEMENT OF WORK.
4. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITIES AND/OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. APPROVAL OF THESE PLANS DOES NOT CONSTITUTE A REPRESENTATION AS TO THE ACCURACY OR COMPLETENESS OF THE LOCATION OR THE EXISTENCE, OR NON-EXISTENCE OF ANY UTILITY AND/OR STRUCTURE WITHIN THE LIMITS OF THIS PROJECT. THE CONTRACTOR IS REQUIRED TO TAKE ALL DUE PRECAUTIONARY MEASURES TO PROTECT THE UTILITIES OF RECORD AND/OR NOT OF RECORD SHOWN OR NOT SHOWN AND ANY OTHER LINE(S) OR STRUCTURE(S) NOT SHOWN ON THESE PLANS. THE CONTRACTOR IS RESPONSIBLE FOR THE PROTECTION OF, AND/OR DAMAGE TO THESE LINE(S) AND/OR STRUCTURE(S).
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR TEMPORARY SHORING AT PROPOSED BUILDING FOUNDATIONS, FOOTINGS, AND WALLS TO PROTECT EXISTING UTILITIES IN PLACE.
6. UNAUTHORIZED CHANGES AND USES - CAUTION: THE ENGINEER PREPARING THESE PLANS WILL NOT BE RESPONSIBLE FOR, OR LIABLE FOR, UNAUTHORIZED CHANGES TO OR USES OF THESE PLANS. ALL CHANGES TO THE PLANS MUST BE IN WRITING AND MUST BE APPROVED BY THE PREPARER OF THESE PLANS.
7. THE CONTRACTOR SHALL MAINTAIN THE EXISTING ACCESSIBLE ROUTE CLEAR OR PROVIDE AN ALTERNATE ACCESSIBLE ROUTE OF TRAVEL DURING DEMOLITION AND/OR CONSTRUCTION.
8. THE CONTRACTOR SHALL MAINTAIN THE EXISTING FIRE EXITS AND STAIRS CLEAR AND USABLE OR PROVIDE ALTERNATE FIRE EXITS DURING DEMOLITION AND/OR CONSTRUCTION.

EARTHWORK NOTES

1. IT IS THE CONTRACTOR'S RESPONSIBILITY TO REVIEW THE GRADING PLANS AND SOILS REPORT THOROUGHLY PRIOR TO SITE MOBILIZATION. IT IS ALSO THE GRADING CONTRACTOR'S RESPONSIBILITY TO NOTIFY THE CIVIL AND SOILS ENGINEERS IF ONSITE DISCREPANCIES ARE OBSERVED THAT WOULD AFFECT THE EARTHWORK QUANTITIES.
2. THE EXISTING TOPOGRAPHY AS DELINEATED ON THESE DRAWINGS SHALL BE UTILIZED AS THE BASIS FOR ALL EARTHWORK COMPUTATIONS. SAID TOPOGRAPHY SHALL BE PRESUMED TO BE ACCEPTABLE TO ALL INTERESTED PARTIES UNLESS A DEVIATION IS FOUND PRIOR TO THE START OF GRADING IN ANY SPECIFIC AREAS. ANY DEVIATION SO DETERMINED SHALL BE PROMPTLY TRANSMITTED TO ALL INTERESTED PARTIES.
3. THE CONTRACTOR IS REQUIRED TO ESTIMATE THE QUANTITIES OF GRADING WORK TO BE DONE AND INCLUDE ALL COSTS THEREFROM WITH HIS BID, AS NO ADDITIONAL ALLOWANCE WILL BE MADE WITHOUT PRIOR CONSENT FROM THE OWNER.
4. OVER-EXCAVATION AND/OR EXCESS BACKFILLING OR DUPLICATION OF GRADING ACTIVITIES IS NOT A BASIS FOR ADDITIONAL COMPENSATION. THIS ALSO APPLIES WHERE MATERIAL IS TO BE REMOVED AND REPLACED TO REDUCE MOISTURE CONTENT.
5. OFF-SITE DISPOSAL OF EXCAVATION MATERIAL IS THE RESPONSIBILITY OF THE CONTRACTOR AND SHALL BE INCLUDED IN THE BID. THE CONTRACTOR SHALL HOLD THE OWNER AND ENGINEER HARMLESS AS A RESULT OF ANY CLAIMS ARISING FROM THE ACTIONS ENROUTE OR AWAY FROM THE SITE.
6. EARTH VOLUMES SHOWN HEREON ARE ESTIMATES BASED UPON THE GEOTECHNICAL ANALYSIS PERFORMED BY THE NAMED SOILS ENGINEER AND TOPOGRAPHIC SURVEY OF THE EXISTING GROUND SURFACE AT THE TIME OF PLAN PREPARATION. EARTHWORK VOLUMES ARE COMPUTED BY METHODS COMMONLY USED IN STANDARD ENGINEERING PRACTICE, AND ARE INTENDED FOR USE IN ESTABLISHING GOVERNING AGENCY FEES. ACTUAL FIELD CONDITIONS MAY VARY FROM OBSERVED OR MEASURED CONDITIONS AT THE TIME OF PLAN PREPARATION. EARTHWORK QUANTITIES MAY VARY AS A RESULT.
7. ANY EXPORT OR IMPORT REQUIRED TO BALANCE THE SITE SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR.
8. PAVEMENT AND SUBGRADE RECOMMENDATIONS RELATED TO OVER-EXCAVATION, PAVEMENT SUBGRADE, ETC., PER GEOTECHNICAL REPORT.

GEOTECHNICAL INFORMATION

FOR SITE PREPARATION, OVEREXCAVATION, FOUNDATION RECOMMENDATIONS, PAVEMENT, SUBGRADE, AND GRADATION REQUIREMENTS SEE GEOTECHNICAL INVESTIGATION REPORT ENTITLED:

"GEOTECHNICAL EXPLORATION REPORT
MALIBU MIDDLE AND HIGH SCHOOL CAMPUS
PHASE II IMPROVEMENTS

GRADING PLAN

C2.01

HORIZONTAL CONTROL PLAN | 1" = 20' | 05

PAVING NOTES:

1. LOCATION AND TYPE OF CONCRETE WALKS AND HARDSCAPE INCLUDING DETAILS FOR CONCRETE FINISHES, CONTROL JOINTS AND EXPANSION JOINTS TO MATCH EXISTING CONDITIONS.

PAVING LEGEND

SYMBOL	DESCRIPTION
30	PEDESTRIAN CONCRETE PAVEMENT 5 1/2" PCC OVER 4" CL II AB PER DETAIL 01 SHEET C7.01.

CONSTRUCTION NOTES:

KEY NOTE	DESCRIPTION
70	DROP-OFF ZONE STRIPING. 4" WIDE YELLOW STRIPE AT 45° ANGLE AT 3' SPACING OC. PAINT WORDS "NO PARKING" IN 12" HIGH LETTERS, WHERE INDICATED.
71	4" WIDE YELLOW STRIPING PAINT WORDS "NO LOADING ZONE" IN 12" HIGH LETTERS, WHERE INDICATED.

STRIPING NOTES

1. ALL EXISTING STRIPING AND MARKINGS TO REMAIN UNLESS OTHERWISE NOTED. CONFLICTS BETWEEN EXISTING AND PROPOSED SHALL BE RESOLVED BY THE ENGINEER.
2. REMOVAL OF EXISTING STRIPING AND PAVEMENT MARKINGS SHALL BE ACCOMPLISHED BY WET SANDBLASTING OR OTHER APPROVED GRINDING METHOD PRIOR TO INSTALLATION OF NEW STRIPING. ALL CONFLICTING STRIPING, PAVEMENT MARKINGS, AND RAISED PAVEMENT MARKERS SHALL BE REMOVED.
3. PAVEMENT THAT IS DAMAGED DUE TO THE REMOVAL OF MARKERS OR STRIPING SHALL BE REPAIRED TO THE SATISFACTION OF THE OWNER.

HORIZONTAL CONTROL NOTES:

THIS HORIZONTAL CONTROL PLAN ESTABLISHES THE FOLLOWING TO BE USED AS BASE CONTROL FOR CONSTRUCTION STAKING.

1. PRIOR TO STAKING ANY BUILDING STRUCTURE, SURVEYOR SHALL VERIFY THAT THE GRIDS SHOWN ON THIS PLAN MATCHES THE ARCHITECTURAL & STRUCTURAL PLANS.
2. TWO COORDINATES ARE PROVIDED TO ESTABLISH THE BUILDING GRID. SEE ARCHITECTURAL AND STRUCTURAL PLANS FOR FINAL BUILDING DIMENSIONS.
3. IF ANY DISCREPANCIES ARE FOUND DURING CONSTRUCTION STAKING NOTIFY CIVIL ENGINEER IMMEDIATELY.
4. SEE LANDSCAPE PLANS FOR DETAILED HARDSCAPE DIMENSIONS.
5. SEE LANDSCAPE PLANS FOR LOCATION AND TYPE OF CONCRETE WALKS AND HARDSCAPE INCLUDING DETAILS FOR CONCRETE FINISHES, CONTROL JOINTS AND EXPANSION JOINTS.
6. SEE PAVING AND STRIPING PLANS FOR LOCATION AND TYPE OF PAVING AND STRIPING.

HORIZONTAL CONTROL & PAVING PLAN

C5.01

1 NEW CONCRETE PAVING AND REINFORCEMENT; REFER TO DTL. 01/-

2 EXISTING CONCRETE PAVING

3 1/2" X 24" SMOOTH STEEL DOWEL AT 18" O.C.

4 5/8" SLIP SLEEVE DRILLED INTO EXISTING CONCRETE PAVING; DOWEL TO HAVE FREE MOVEMENT ON THIS SIDE

5 JOINT SEALANT WITH BACKER ROD

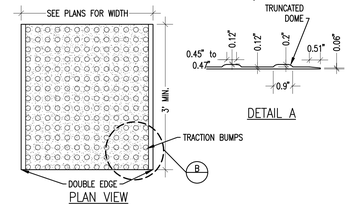
6 BASE MATERIAL AND COMPACTED SUBGRADE; REFER TO DTL. 01/-

7 1/8" RADIUS; AT NEW CONCRETE PAVING

NOTES:

A. PROVIDE AT ALL LOCATIONS WHERE NEW CONCRETE JOINS EXISTING CONCRETE.

B. PROVIDE CLEAN SAWCUT AT EXISTING PAVING. EXTEND PROPOSED PAVING AS REQUIRED TO CLOSEST ADJACENT JOINT.

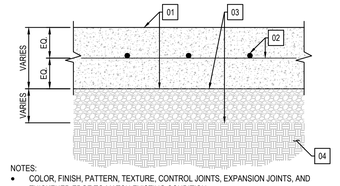


C. SEE PLANS FOR LIMIT OF DEMOLITION.

D. NATIVE OR FILL SOIL SUPPORTING EXTERIOR NON-STRUCTURAL FLATWORK AND UNPAVED LANDSCAPING AREAS ARE EXEMPT FROM SPECIAL INSPECTION AND TESTING.

E. CONCRETE BATCH PLANT INSPECTION IS NOT REQUIRED.

CONCRETE PAVING TIE-IN



3"=1'-0" - 03

NOTE:
THE DETECTABLE WARNING SHALL EXTEND THE FULL WIDTH AND DEPTH OF THE CURB RAMP AND SHALL BE YELLOW COLOR AND MEET THE CONFIGURATION AND DIMENSION SHOWN. MANUFACTURER SHALL BE VANGUARD OR EQUAL. MAT SHALL BE FLUSH WITH ADJACENT CONCRETE WALK. RECESS CONCRETE WALK AS REQUIRED.

DETECTABLE WARNING MAT

NTS 02

NOTES:
- COLOR, FINISH, PATTERN, TEXTURE, CONTROL JOINTS, EXPANSION JOINTS, AND THICKENED EDGE TO MATCH EXISTING CONDITION.
- CONCRETE DOWELING PER DETAIL 03 SHEET C7.01.
- DO NOT ALLOW CONCRETE OVER-POUR INTO ADJACENT PLANTERS.
- MINIMUM CONCRETE STRENGTH PER SPECIFICATION SECTION 321313.

*SUBGRADE NOTES:
- PLACE AT LEAST 2 FEET OF RELATIVELY NON-EXPANSION FILL (EI < 20) UNDER ALL SLABS-ON-GRADE AND NEARBY FLATWORK. SLAB-ON-SLAB SUBGRADE SOIL SHALL BE MOISTURE CONDITIONED TO 3%–5% ABOVE OPTIMUM MOISTURE CONTENT, DOWN TO 18 INCHES DEEP, AND COMPACTED TO 90% OF THE MODIFIED PROCTOR (ASTM D1557) LAB MAX DENSITY BEFORE INSTALLING VAPOR BARRIERS, STEEL, OR CONCRETE.

*THE PROJECT GEOTECHNICAL REPORT INCLUDING ALL AMENDMENTS ARE TO SUPERSEDE THE PROVIDED SUBGRADE NOTES WHERE ANY DISCREPANCY OCCURS.

01 CONCRETE PAVING 6" THICK

02 #4 @ 12" OC EACH WAY

GENERAL EROSION AND SEDIMENT CONTROL NOTES

1. CONTRACTOR SHALL ENSURE THAT THE CONSTRUCTION SITE IS PREPARED PRIOR TO THE START OF CONSTRUCTION. CONTRACTOR SHALL HAVE ALL EROSION AND SEDIMENT CONTROL MEASURES IN PLACE AT ALL TIMES DURING CONSTRUCTION.
2. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE MAINTAINED UNTIL DISTURBED AREAS ARE STABILIZED.
3. THIS PLAN MAY NOT COVER ALL THE SITUATIONS THAT ARISE DURING CONSTRUCTION DUE TO UNANTICIPATED FIELD CONDITIONS.
4. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE CHECKED BEFORE AND AFTER ALL STORMS TO ENSURE MEASURES ARE FUNCTIONING PROPERLY.
5. CONTRACTOR SHALL MAINTAIN A LOG AT THE SITE OF ALL INSPECTIONS OR MAINTENANCE OF BMPS, AS WELL AS, ANY CORRECTIVE CHANGES TO THE BMPS OR EROSION AND SEDIMENT CONTROL PLAN.
6. IN AREAS WHERE SOIL IS EXPOSED, PROMPT REPLANTING WITH NATIVE COMPATIBLE, DROUGHT-RESISTANT VEGETATION SHALL BE PERFORMED. NO AREAS WILL BE LEFT EXPOSED OVER THE WINTER SEASON.
7. THE CONTRACTOR SHALL INSTALL THE STABILIZED CONSTRUCTION ENTRANCE PRIOR TO COMMENCEMENT OF GRADING. LOCATION OF THE ENTRANCE MAY BE ADJUSTED BY THE CONTRACTOR TO FACILITATE GRADING OPERATIONS. ALL CONSTRUCTION TRAFFIC ENTERING THE PAVED ROAD MUST CROSS THE STABILIZED CONSTRUCTION ENTRANCE.
8. ALL SEDIMENT DEPOSITED ON PAVED ROADWAYS SHALL BE SWEPT AT THE END OF EACH WORKING DAY OR MORE OFTEN AS NECESSARY.
9. CONTRACTOR SHALL PLACE GRAVEL/SAND BAGS AROUND ALL NEW DRAINAGE STRUCTURE OPENINGS IMMEDIATELY AFTER THE STRUCTURE OPENING IS CONSTRUCTED. THESE GRAVEL/SAND BAGS SHALL BE MAINTAINED AND REMAIN IN PLACE UNTIL CONSTRUCTION IS COMPLETED.
10. CONTRACTOR SHALL IMPLEMENT HOUSEKEEPING PRACTICES AS FOLLOWS:
    A. SOLID WASTE MANAGEMENT:
    PROVIDE DESIGNATED WASTE COLLECTION AREAS AND CONTAINERS. ARRANGE FOR REGULAR REMOVAL AND DISPOSAL. CLEAR SITE OF TRASH INCLUDING ORGANIC DEBRIS. PACKAGING MATERIALS, SCRAP OR SURPLUS BUILDING MATERIALS AND DOMESTIC WASTE DAILY.
    B. MATERIAL DELIVERY AND STORAGE:
    PROVIDE A DESIGNATED MATERIAL STORAGE AREA WITH SECONDARY CONTAINMENT SUCH AS BERMING. STORE MATERIAL ON PALLETS AND PROVIDE COVERING FOR SOLUBLE MATERIALS. RELOCATE STORAGE AREA INTO BUILDING SHELL WHEN POSSIBLE. INSPECT AREA WEEKLY.
    C. CONCRETE WASTE:
    PROVIDE A DESIGNATED AREA FOR A TEMPORARY PIT TO BE USED FOR CONCRETE TRUCK WASH-OUT. CONCRETE WASHOUT CANNOT BE WITHIN 50' MINIMUM OF DRAIN INLETS. DISPOSE OF HARDENED CONCRETE OFFSITE. AT NO TIME SHALL A CONCRETE TRUCK DUMP ITS WASTE AND CLEAN ITS TRUCK INTO THE STORM DRAINS VIA CURB AND GUTTER. INSPECT DAILY TO CONTROL RUNOFF, AND WEEKLY FOR REMOVAL OF HARDENED CONCRETE.
    D. PAINT AND PAINTING SUPPLIES:
    PROVIDE INSTRUCTION TO EMPLOYEES AND SUBCONTRACTORS REGARDING REDUCTION OF POLLUTANTS INCLUDING MATERIAL STORAGE, USE, AND CLEAN UP. INSPECT SITE WEEKLY FOR EVIDENCE OF IMPROPER DISPOSAL.
    E. VEHICLE FUELING, MAINTENANCE AND CLEANING:
    PROVIDE A DESIGNATED FUELING AREA WITH SECONDARY CONTAINMENT SUCH AS BERMING. DO NOT ALLOW MOBILE FUELING OF EQUIPMENT. PROVIDE EQUIPMENT WITH DRIP PANS. RESTRICT ONSITE MAINTENANCE AND CLEANING OF EQUIPMENT TO A MINIMUM. INSPECT AREA WEEKLY.
    F. HAZARDOUS WASTE MANAGEMENT:
    PREVENT THE DISCHARGE OF POLLUTANTS FROM HAZARDOUS WASTES TO THE DRAINAGE SYSTEM THROUGH PROPER MATERIAL USE. WASTE DISPOSAL AND TRAINING OF EMPLOYEES. HAZARDOUS WASTE PRODUCTS COMMONLY FOUND ON-SITE INCLUDE BUT ARE NOT LIMITED TO PAINTS & SOLVENTS, PETROLEUM PRODUCTS, FERTILIZERS, HERBICIDES & PESTICIDES, SOIL STABILIZERS, STABILIZATION PRODUCTS, ASPHALT PRODUCTS AND CONCRETE CURING PRODUCTS.
11. CONTRACTOR SHALL HYDROSEED ALL GRADED SLOPES. NATIVE SEED MIX SHALL BE 20% LANA PUBESCENT WHEAT GRASS, 40% BLANDO BROME, AND 40% ANNUAL RYE GRASS AND SHALL BE APPLIED AT A RATE OF 200 POUNDS PER ACRE. SOIL BINDING AGENT SHALL BE VERDYOL, SENTINEL, OR EQUAL, APPLIED AT A RATE OF 110 POUNDS PER ACRE. MULCH SHALL BE SILVER-FIBER, CONWED, OR EQUAL, APPLIED AT A RATE OF 1,000 POUNDS PER ACRE. FERTILIZER SHALL BE AGRI-FORM 16-7-12, BEST 16-6-8, OR EQUAL, APPLIED AT A RATE OF 500 POUNDS PER ACRE. THE CONTRACTOR SHALL WATER SEEDED AREAS OR RESEED AS NECESSARY TO ENSURE SUFFICIENT PLANT DEVELOPMENT FOR EROSION CONTROL.
12. NO GRADING SHALL BE DONE UNTIL SITE- AND SEASON-SPECIFIC SOIL LOSS AND HOUSEKEEPING STORMWATER BMPs HAVE BEEN APPROVED BY THE INSPECTOR. THE CONTRACTOR SHOULD EMPLOY THE DESIGN BMPs AND ANY OTHERS NEEDED AS SITUATIONS ARISE. CONTRACTOR SHOULD CONDUCT SITE INSPECTIONS BEFORE, DURING AND AFTER EACH EXTENDED STORM EVENT TO IDENTIFY CONDITIONS THAT MAY CONTRIBUTE TO EROSION AND SEDIMENT PROBLEMS OR ANY OTHER POLLUTANT DISCHARGES. IF ADDITIONAL CONTROL MEASURES ARE NEEDED, CONTRACTOR SHOULD IMPLEMENT THEM IMMEDIATELY.

POLLUTION PREVENTION NOTES

IN ORDER TO MEET THE REQUIREMENTS OF THE NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PROGRAM FOR CONSTRUCTION, CONSTRUCTION CONTRACTORS SHALL INSTALL AND MAINTAIN APPROPRIATE BEST MANAGEMENT PRACTICES (BMPS), AS SHOWN IN THE EROSION CONTROL PLAN AND IN ACCORDANCE WITH THE SWPPP (STORM WATER POLLUTION PREVENTION PLAN), ON ALL CONSTRUCTION PROJECTS. BMPS SHALL BE INSTALLED IN ACCORDANCE WITH INDUSTRY RECOMMENDED STANDARDS, AND/OR IN ACCORDANCE WITH ANY GENERAL CONSTRUCTION PERMIT ISSUED BY THE STATE FOR THE PROJECT TO PREVENT ANY DISCHARGES FROM THE PROJECT SITE OR INTO ANY STORM DRAIN FACILITIES. ALL SEDIMENTS, CONSTRUCTION MATERIALS, DEBRIS AND WASTES, AND OTHER POLLUTANTS MUST BE RETAINED ON SITE AND MAY NOT BE TRANSPORTED FROM THE SITE VIA SHEET FLOW, SWALES, AREA DRAINS, NATURAL DRAINAGE COURSES, WIND, OR VEHICLE TRACKING. UNDER DIRECTION OF THE ENGINEER OF RECORD, EROSION AND/OR SEDIMENT CONTROL DEVICES SHALL BE MODIFIED AS NEEDED AS THE PROJECT PROGRESSES TO ENSURE EFFECTIVENESS.

BMP MAINTENANCE NOTES

1. FOLLOWING OWNER ACCEPTANCE OF CONSTRUCTION WORK, POST CONSTRUCTION BEST MANAGEMENT PRACTICE (BMP) MEASURES SHALL BE MAINTAINED BY THE PROPERTY OWNER, INCLUDING BUT NOT LIMITED TO:
    1.1. ANNUAL INSPECTION, REPLACEMENT, AND/OR SEDIMENTATION REMOVAL OF VEGETATED SWALES, TREATMENT PONDS, AND OTHER SURFACE STORMWATER TREATMENT MEASURES AS REQUIRED WITH AN INCREASED FREQUENCY BASED ON SITE CONDITIONS.
    1.2. MAINTENANCE SERVICE AGREEMENT(S) OF STORMWATER TREATMENT VAULTS, INLETS, MANHOLES, AND OTHER DEVICES BASED ON MANUFACTURES' RECOMMENDATIONS AND FREQUENCY.
    1.3. ANNUAL INSPECTION OF PERMEABLE PAVEMENT AND REMOVAL OF SEDIMENT AS NEEDED.
    1.4. ANNUAL INSPECTION OF STORMWATER INLETS AND MAINTENANCE AS REQUIRED TO CLEAR GRATES AND INLETS OF DEBRIS.
    1.5. THE PROJECT STORMWATER POLLUTION PREVENTION PLAN (SWPPP) AND WATER QUALITY MANAGEMENT PLAN (WQMP) MAY CONTAIN ADDITIONAL OR MORE STRINGENT MAINTENANCE REQUIREMENTS.
2. BMP DETAILS MAY BE FOUND IN APPENDIX H OF THE PROJECT SWPPP DOCUMENT. BMP DETAILS PER CALIFORNIA STORMWATER QUALITY ASSOCIATION (CASQA) AND ARE AVAILABLE AT www.casqa.org.
3. FOR PROJECTS GREATER THAN 1 ACRE: THE CONTRACTOR SHALL VERIFY THE STATUS OF THE SWPPP/NOI/WDID PRIOR TO EARTHMOVING ACTIVITIES. A STORMWATER POLLUTION PREVENTION PLAN (SWPPP) SHALL BE PREPARED AND A NOTICE OF INTENT (NOI) SHALL BE FILED WITH THE STATE WATER RESOURCES CONTROL BOARD (SWRCB) IN ACCORDANCE WITH THE REQUIREMENTS OF CALIFORNIA GENERAL PERMIT FOR STORMWATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY (PERMIT NO. CAS000002) FOR ALL OPERATIONS ASSOCIATED WITH THESE PLANS. THE CONTRACTOR SHALL KEEP A COPY OF THE SWPPP ON SITE AND AVAILABLE FOR REVIEW.

AREA SUMMARY

TOTAL DISTURBED AREA = X.XXx ACRES

DEMOLITION NOTES

1. THE INTENT OF THE DEMOLITION PLAN IS TO DESCRIBE IN GENERAL THE DEMOLITION AREAS AFFECTED BY THE PROJECT CONSTRUCTION. IT IS NOT INTENDED AS A DETAILED DESCRIPTION OF EXISTING ITEMS OR ELEMENTS TO BE REMOVED. THE CONTRACTOR SHALL VISIT THE SITE AND REVIEW ANY AVAILABLE RECORD DOCUMENTS TO BECOME FAMILIAR WITH THE EXISTING CONDITIONS AND SHOULD INCLUDE THE REMOVAL OF ALL ITEMS NECESSARY FOR THE PROPER EXECUTION AND COMPLETION OF THE WORK. THE CONTRACT DOCUMENTS ARE COMPLEMENTARY, AND WHAT IS REQUIRED BY ONE SHALL BE BINDING AS IF REQUIRED BY ALL TO THE EXTENT THAT IT IS REASONABLY INFERABLE FROM THEM AS BEING NECESSARY TO PRODUCE THE INTENDED RESULTS.
2. REMOVE EXISTING BUILDINGS, FOUNDATIONS AND SERVICE UTILITIES AS INDICATED ON PLANS. CAP ALL UTILITIES AT APPROPRIATE POINTS. ALL EXISTING ELECTRICAL / TELEPHONE / CATV UTILITIES SHALL BE REMOVED AS INDICATED OR BACK TO THE POINT WHERE THE SPECIFIC UTILITY SYSTEM ENTERS THE WORK AREA. COORDINATE DEMOLITION OF ALL UTILITIES WITH THE OWNER. ALL UTILITIES CONNECTED TO EXISTING BUILDINGS TO REMAIN SHALL CONTINUE TO BE OPERATIONAL DURING THE DEMOLITION PROCESS. DOMESTIC AND FIRE SERVICE WATER AND NATURAL GAS SHALL BE REMOVED TO A POINT OUTSIDE THE PERIMETER OF PROPOSED NEW CONSTRUCTION TO EXISTING VALVES OR SIMILAR SHUT-OFF DEVICES. IF A SHUT-OFF DEVICE IS NOT REASONABLY ADJACENT TO THE PERIMETER OF THE PROPOSED NEW CONSTRUCTION, PROVIDE A SHUT-OFF DEVICE IN BELOW-GRADE YARD BOX. CONFIRM LOCATION OF NEW DEVICES WITH OWNER PRIOR TO INSTALLATION. SANITARY SEWER AND STORM DRAINAGE SHALL BE CAPPED TO A POINT OUTSIDE THE PERIMETER OF THE PROPOSED NEW CONSTRUCTION. OTHER UTILITIES NOT SPECIFICALLY IDENTIFIED IN THESE DOCUMENTS AND NOT ANTICIPATED FOR REUSE SHALL BE REMOVED IN ENTIRETY.
3. FOR ALL EXISTING MATERIALS THAT CAN BE SALVAGED, OWNER HAS FIRST RIGHT OF REFUSAL FOR REMOVED ITEMS THAT MAY HAVE RESIDUAL COMMERCIAL OR HISTORIC VALUE INCLUDING HARDWARE, GLASS, CORNER STONES, TIME CAPSULES, LIGHT STANDARDS, SIGNS, FENCING, BENCHES, WATER FOUNTAINS, TRASH CONTAINERS, ETC. SHALL REMAIN AS PROPERTY OF THE OWNER. ALL ITEMS TO BE SALVAGED FOR REUSE/REINSTALLATION MUST MEET CURRENT CODE REQUIREMENTS. COORDINATE ITEMS TO BE RETAINED WITH OWNER AND REMOVE FROM CONSTRUCTION SITE TO A LOCATION APPROVED BY OWNER. REMOVED MATERIALS, NOT INDICATED OR DIRECTED TO BE SALVAGED FOR THE OWNER'S BENEFIT ARE DEBRIS AND BECOME THE CONTRACTOR'S PROPERTY UPON REMOVAL.
4. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THESE PLANS ARE OBTAINED BY SEARCH OF THE AVAILABLE RECORDS AND FIELD SURVEYS. THE CONTRACTOR SHALL CONTACT UNDERGROUND SERVICE ALERT, UTILITY COMPANIES, AND/OR FIELD VERIFY AND LOCATE ALL UTILITIES BEFORE PROCEEDING WITH WORK. THE CONTRACTOR IS ALSO REQUIRED TO TAKE DUE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN AND ANY OTHER LINES NOT OF RECORD OR NOT SHOWN ON THESE PLANS. NOTIFY THE ENGINEER IF ADDITIONAL UTILITIES ARE LOCATED OR IF CONFLICTS ARE FOUND WITH EXISTING CONDITIONS.
5. ALL TREES TO BE REMOVED SHALL BE MARKED BY CONTRACTOR AND APPROVED FOR REMOVAL BY THE OWNER OR OWNER'S REPRESENTATIVE PRIOR TO REMOVING OR CUTTING TREE(S). EXISTING ROOTS SHALL BE GRINDED TO A DEPTH OF APPROXIMATELY 3-FEET. USE CAUTION WHILE GRINDING WHEN EXISTING UTILITIES ARE IN CLOSE PROXIMITY TO TREES. ALL TREES TO REMAIN WITHIN THE LIMIT OF WORK SHALL BE PROTECTED AND MAINTAINED PER SPECIFICATIONS AND DETAILS.
6. SAWCUT EXISTING CONCRETE AND ASPHALT TO AN EXISTING CONTROL JOINT WHERE POSSIBLE, AT MINIMUM TO A NEAT-STRAIGHT LINE. ALL DEBRIS SHALL BE HAULED OFFSITE TO A LEGAL DUMPING SITE OR SALVAGED FOR REUSE ON PROJECT AS NOTED.
7. WORK WITHIN CITY, COUNTY, OR STATE RIGHT-OF-WAY REQUIRES A SEPARATE ENCROACHMENT PERMIT WHICH THE CONTRACTOR IS RESPONSIBLE FOR OBTAINING PRIOR TO STARTING WORK WITHIN RIGHT-OF-WAY.
8. CONTRACTOR TO COORDINATE UTILITY DEMOLITION WITH DRAINAGE AND UTILITY WORK SHOWN IN THIS PLAN SET. ALL UTILITY SHUTDOWNS SHALL BE COORDINATED PER PROJECT SPECIFICATIONS.
9. EXISTING DRY UTILITIES SHOWN FOR DEMOLITION ARE SHOWN FOR COORDINATION ONLY. REFER TO OTHER DISCIPLINES FOR LIMITS AND DETAILS OF DEMOLITION.
10. THE CONTRACTOR SHALL RECYCLE CONSTRUCTION DEBRIS, ASPHALT, AND CONCRETE GENERATED FROM REMOVALS REQUIRED TO CONSTRUCT THE PROJECT. THE CONTRACTOR IS OBLIGATED, UNDER THIS CONTRACT, TO RECYCLE THE WASTE MATERIAL THROUGH AN APPROVED RECYCLING PLANT.
11. A LIST OF FACILITIES THAT ACCEPT CONSTRUCTION & DEMOLITION DEBRIS CAN BE FOUND ON THE CALRECYCLE WEBSITE AT: HTTPS://WWW.CALRECYCLE.CA.GOV/CONDEMO
12. CONTRACTOR IS RESPONSIBLE FOR PROTECTING EXISTING BUILDING FINISHES DURING DEMOLITION. ANY FINISH THAT IS DAMAGED DURING DEMOLITION SHALL BE REPAIRED OR REPLACED IN-KIND OR BETTER.

GENERAL NOTES TO CONTRACTOR

1. THE CONTRACTOR SHALL CONTACT THE RESPECTIVE UTILITY OWNERS FOR LOCATION, REMOVAL, AND/OR RELOCATION OF ANY UTILITY SERVICES AFFECTED BY CONSTRUCTION. THE CONTRACTOR SHALL TAKE ALL NECESSARY PRECAUTIONARY MEASURES TO PROTECT UNDERGROUND OR OVERHEAD STRUCTURES WHETHER OR NOT THEY ARE SHOWN ON THESE DRAWINGS.
2. THE CONTRACTOR SHALL NOTIFY THE PROJECT INSPECTOR AND THE RESPECTIVE UTILITY OWNERS AND OTHER AGENCIES AT LEAST TWO WORKING DAYS PRIOR TO START OF CONSTRUCTION.
3. THE CONTRACTOR SHALL BE RESPONSIBLE FOR EXPOSING, VERIFYING LOCATIONS (BOTH HORIZONTAL AND VERTICAL), AND MAINTAINING ALL EXISTING UNDERGROUND UTILITIES, BOTH SHOWN ON THE PLANS AND/OR NOT SHOWN ON THE PLANS DURING CONSTRUCTION. REPAIR DAMAGED UTILITIES TO THE SATISFACTION OF THE ENGINEER. THE CONTRACTOR SHALL LOCATE EXISTING UNDERGROUND UTILITIES SUFFICIENTLY AHEAD OF CONSTRUCTION TO PERMIT REVISIONS TO PLANS BECAUSE OF LOCATIONS OF EXISTING FACILITIES AND SHALL REPORT ALL DISCREPANCIES TO THE ENGINEER PRIOR TO THE COMMENCEMENT OF WORK.
4. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITIES AND/OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. APPROVAL OF THESE PLANS DOES NOT CONSTITUTE A REPRESENTATION AS TO THE ACCURACY OR COMPLETENESS OF THE LOCATION OR THE EXISTENCE, OR NON-EXISTENCE OF ANY UTILITY AND/OR STRUCTURE WITHIN THE LIMITS OF THIS PROJECT. THE CONTRACTOR IS REQUIRED TO TAKE ALL DUE PRECAUTIONARY MEASURES TO PROTECT THE UTILITIES OF RECORD AND/OR NOT OF RECORD SHOWN OR NOT SHOWN AND ANY OTHER LINE(S) OR STRUCTURE(S) NOT SHOWN ON THESE PLANS. THE CONTRACTOR IS RESPONSIBLE FOR THE PROTECTION OF, AND/OR DAMAGE TO THESE LINE(S) AND/OR STRUCTURE(S).
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR TEMPORARY SHORING AT PROPOSED BUILDING FOUNDATIONS, FOOTINGS, AND WALLS TO PROTECT EXISTING UTILITIES IN PLACE.
6. UNAUTHORIZED CHANGES AND USES - CAUTION: THE ENGINEER PREPARING THESE PLANS WILL NOT BE RESPONSIBLE FOR, OR LIABLE FOR, UNAUTHORIZED CHANGES TO OR USES OF THESE PLANS. ALL CHANGES TO THE PLANS MUST BE IN WRITING AND MUST BE APPROVED BY THE PREPARER OF THESE PLANS.
7. THE CONTRACTOR SHALL MAINTAIN THE EXISTING ACCESSIBLE ROUTE CLEAR OR PROVIDE AN ALTERNATE ACCESSIBLE ROUTE OF TRAVEL DURING DEMOLITION AND/OR CONSTRUCTION.
8. THE CONTRACTOR SHALL MAINTAIN THE EXISTING FIRE EXITS AND STAIRS CLEAR AND USABLE OR PROVIDE ALTERNATE FIRE EXITS DURING DEMOLITION AND/OR CONSTRUCTION.

EARTHWORK NOTES

1. IT IS THE CONTRACTOR'S RESPONSIBILITY TO REVIEW THE GRADING PLANS AND SOILS REPORT THOROUGHLY PRIOR TO SITE MOBILIZATION. IT IS ALSO THE GRADING CONTRACTOR'S RESPONSIBILITY TO NOTIFY THE CIVIL AND SOILS ENGINEERS IF ONSITE DISCREPANCIES ARE OBSERVED THAT WOULD AFFECT THE EARTHWORK QUANTITIES.
2. THE EXISTING TOPOGRAPHY AS DELINEATED ON THESE DRAWINGS SHALL BE UTILIZED AS THE BASIS FOR ALL EARTHWORK COMPUTATIONS. SAID TOPOGRAPHY SHALL BE PRESUMED TO BE ACCEPTABLE TO ALL INTERESTED PARTIES UNLESS A DEVIATION IS FOUND PRIOR TO THE START OF GRADING IN ANY SPECIFIC AREAS. ANY DEVIATION SO DETERMINED SHALL BE PROMPTLY TRANSMITTED TO ALL INTERESTED PARTIES.
3. THE CONTRACTOR IS REQUIRED TO ESTIMATE THE QUANTITIES OF GRADING WORK TO BE DONE AND INCLUDE ALL COSTS THEREFROM WITH HIS BID, AS NO ADDITIONAL ALLOWANCE WILL BE MADE WITHOUT PRIOR CONSENT FROM THE OWNER.
4. OVER-EXCAVATION AND/OR EXCESS BACKFILLING OR DUPLICATION OF GRADING ACTIVITIES IS NOT A BASIS FOR ADDITIONAL COMPENSATION. THIS ALSO APPLIES WHERE MATERIAL IS TO BE REMOVED AND REPLACED TO REDUCE MOISTURE CONTENT.
5. OFF-SITE DISPOSAL OF EXCAVATION MATERIAL IS THE RESPONSIBILITY OF THE CONTRACTOR AND SHALL BE INCLUDED IN THE BID. THE CONTRACTOR SHALL HOLD THE OWNER AND ENGINEER HARMLESS AS A RESULT OF ANY CLAIMS ARISING FROM THE ACTIONS ENROUTE OR AWAY FROM THE SITE.
6. EARTH VOLUMES SHOWN HEREON ARE ESTIMATES BASED UPON THE GEOTECHNICAL ANALYSIS PERFORMED BY THE NAMED SOILS ENGINEER AND TOPOGRAPHIC SURVEY OF THE EXISTING GROUND SURFACE AT THE TIME OF PLAN PREPARATION. EARTHWORK VOLUMES ARE COMPUTED BY METHODS COMMONLY USED IN STANDARD ENGINEERING PRACTICE, AND ARE INTENDED FOR USE IN ESTABLISHING GOVERNING AGENCY FEES. ACTUAL FIELD CONDITIONS MAY VARY FROM OBSERVED OR MEASURED CONDITIONS AT THE TIME OF PLAN PREPARATION. EARTHWORK QUANTITIES MAY VARY AS A RESULT.
7. ANY EXPORT OR IMPORT REQUIRED TO BALANCE THE SITE SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR.
8. PAVEMENT AND SUBGRADE RECOMMENDATIONS RELATED TO OVER-EXCAVATION, PAVEMENT SUBGRADE, ETC., PER GEOTECHNICAL REPORT.

GEOTECHNICAL INFORMATION

FOR SITE PREPARATION, OVEREXCAVATION, FOUNDATION RECOMMENDATIONS, PAVEMENT, SUBGRADE, AND GRADATION REQUIREMENTS SEE GEOTECHNICAL INVESTIGATION REPORT ENTITLED:

"GEOTECHNICAL EXPLORATION REPORT
MALIBU MIDDLE AND HIGH SCHOOL CAMPUS
PHASE II IMPROVEMENTS
PROPOSED AQUATIC CENTER, MIDDLE SCHOOL BUILDING, AND GYMNASIUM
30215 MORNING VIEW DRIVE
MALIBU, LOS ANGELES COUNTY, CALIFORNIA "

REVISED:	MAY 23, 2025

EARTHWORK QUANTITIES

APPROXIMATE CUT:	0 CY
APPROXIMATE FILL:	9 CY
NET:	9 CY (IMPORT)

NOTE:
EARTHWORK QUANTITIES INDICATED ARE FOR REFERENCE ONLY (NOT FOR BID OR PAYMENT). THE CONTRACTOR IS RESPONSIBLE FOR ACTUAL QUANTITIES.

HAUL ROUTE TO BE DETERMINED AT PRE-GRADE MEETING AND ALL NECESSARY PERMITS SHALL BE OBTAINED BY THE GENERAL CONTRACTOR

BENCHMARK

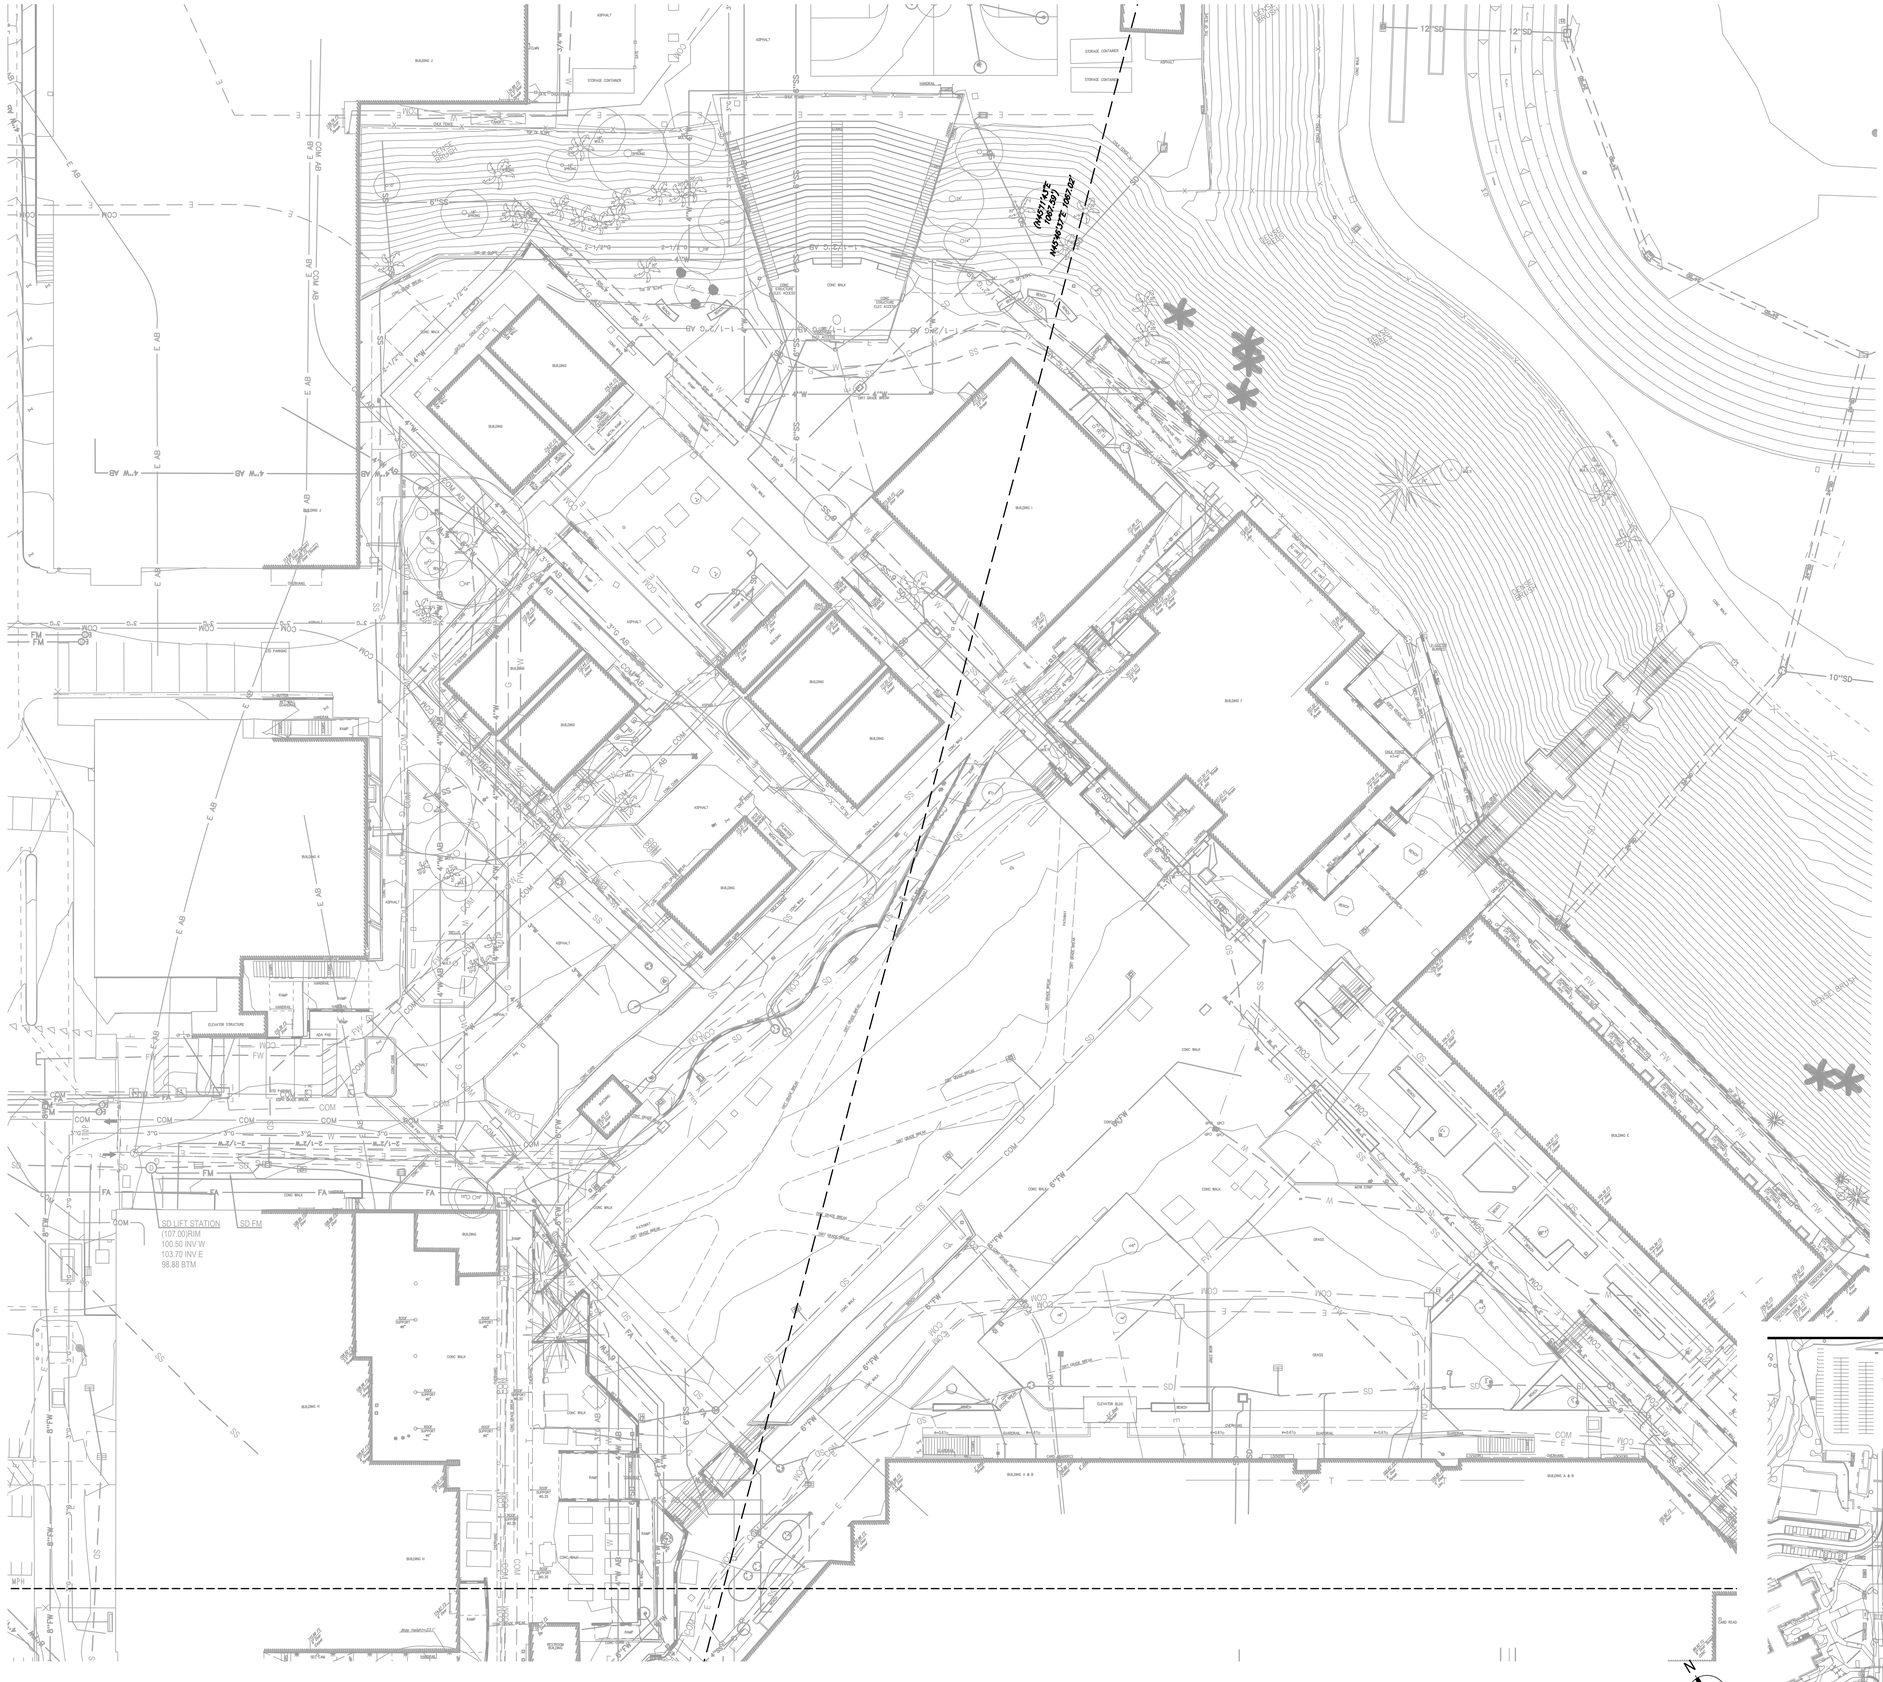
US NATIONAL GEODETIC SURVEY
PID NO: EW4180, EW1593, EW6821, EW4188, EW4106, EW4113, EW4205, EW4212, AE1725, AE1722
NAVD 88 DATUM

DATUM STATEMENT

STATE PLANE COORDINATES, CALIFORNIA SYSTEM ZONE 5 BASED ON NAD83 (CORS96) (EPOCH: 2002.0000) REFERENCE FRAME. THE HORIZONTAL COORDINATE VALUES SHOWN HEREON ARE BASED UPON LOCAL CONTROL POINTS AND DERIVED FROM THE GPS STATIC OBSERVATIONS THAT WERE POST-PROCESSED USING ON-LINE POSITIONING USER SERVICE (OPUS) PROVIDED BY THE US NATIONAL GEODETIC SURVEY.

VERTICAL VALUES ARE BASED UPON NORTH AMERICAN VERTICAL DATUM OF 1988 USING THE FOLLOWING US NATIONAL GEODETIC SURVEY BENCHMARKS: EW4180, EW1593, EW6821, EW4188, EW4106, EW4113, EW4205, EW4212, AE1725, AE1722. SEE SHEET 1 OF SEE PSOMAS MAP "AERIAL TOPOGRAPHIC SURVEY, UTILITY LOCATIONS AND EASEMENT EXHIBIT" JOB NO. 1SAN080102 TASK 100 FOR THE BENCHMARK DESCRIPTION.

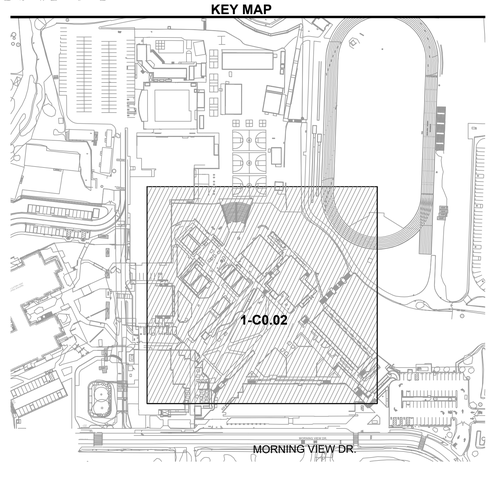
BASIS OF BEARINGS



THE BOUNDARY LINES SHOWN HEREON ARE BASED UPON RECOVERED CITY, COUNTY AND/OR PRIVATE SURVEY MONUMENTS. SEE PSOMAS MAP "BOUNDARY SURVEY"

LEGAL DESCRIPTION

PARCELS 10, 11 AND 12 IN BLOCK 5 AS SHOWN ON THE RECORD OF SURVEY FILE DIN BOOK 56 PAGES 14 TO 17 INCLUSIVE OF RECORDS OF SURVEY, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.



FIRE PROTECTION SYSTEM NOTES

1. PRIOR TO INSTALLATION, ALL PLANS AND SPECIFICATIONS SHALL BE APPROVED BY GOVERNING AGENCY.
2. INSPECTIONS ARE REQUIRED:
    1) PRIOR TO POURING THRUST BLOCKS
    2) FOR HYDROSTATIC TESTING
    3) FOR FLUSH
3. INSTALLATION, INSPECTION, AND TESTING SHALL CONFORM TO 2022 NFPA 13 AND 2019 NFPA 24.
4. PRIVATE FIRE

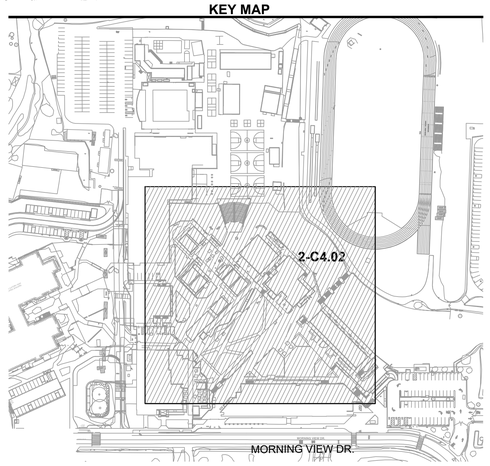
GRADING PLAN

1-C2.01

WATER CONSTRUCTION NOTES:

- (W) DOMESTIC WATER SERVICE POINT OF CONNECTION. SUPPLY AND INSTALL WATER SERVICE LATERAL STUBBED 5 FT. FROM FACE OF BUILDING. SIZE AS SHOWN. PLUG AND MARK END. COORDINATE EXACT LOCATION WITH PLUMBING PLANS.
- (50) SUPPLY AND INSTALL THRUST BLOCK PER DETAIL 2 SHEET C7.01. TYPICAL FOR ALL BENDS, TEES AND CROSSES ON PIPE SIZES GREATER THAN 3".
- (51) SUPPLY AND INSTALL PVC C900 DR-18 WITH 30" MIN COVER AND 36" MIN COVER WHERE SURFACE LOADS ARE EXPECTED. TRENCHING PER DETAIL 08 SHEET C7.02.
- (53) CONNECT TO EXISTING DOMESTIC WATER SERVICE LINE. CONTRACTOR TO VERIFY SIZE AND LOCATION OF EXISTING WATER LINE AND NOTIFY ENGINEER OF ANY DISCREPANCIES PRIOR TO CONSTRUCTION.



GAS CONSTRUCTION NOTES:

- (80) RE-ROUTE EXISTING INTERRUPTED GAS SERVICE. MATCH EXISTING SIZE AND MATERIAL SEE PLUMBING PLANS FOR DETAILS.

CONSTRUCTION NOTES:

1. UTILITIES TO CROSS OVER OR UNDER OTHER UTILITIES TO MAINTAIN 12" MINIMUM CLEARANCE AT UTILITY CROSSINGS, UNLESS NOTED OTHERWISE. SANITARY SEWER TO CROSS UNDER POTABLE WATER.
2. CONTRACTOR SHALL VERIFY SIZE AND LOCATION (HORIZONTAL AND VERTICAL) OF EXISTING CROSSING AND JOINING UTILITIES PRIOR TO CONSTRUCTION AND IMMEDIATELY NOTIFY THE ENGINEER OF ANY CONFLICT.
3. CONTRACTOR SHALL CONSTRUCT GRAVITY UTILITIES (SEWER AND STORM DRAIN) BEFORE OTHER UTILITIES. CONSTRUCTION OF THESE GRAVITY UTILITIES TO START FROM THE DOWNSTREAM ENDS.
4. EXISTING UTILITIES ARE COMPILED BASED ON PREVIOUS BASE FILES, FIELD SURVEY AND FIELD VERIFICATION. POTHOLING IS RECOMMENDED TO VERIFY ANY AND ALL UTILITIES KNOWN OR UNKNOWN WHICH MAY BE IN CONFLICT WITH PROPOSED CONSTRUCTION.
5. PRIOR TO THE REMOVAL OF ANY WET OR DRY UTILITY LINES, THE CONTRACTOR SHALL CONFIRM WITH OWNER REPRESENTATIVE WHETHER THESE UTILITY LINES ARE STILL ACTIVE OR NOT. IMMEDIATELY NOTIFY THE ENGINEER OF ANY CONFLICT.
6. CONTRACTOR TO ADJUST TO FINISH GRADE ALL EXISTING UTILITY BOXES, SEWER CLEANOUT COVERS, PULL BOXES AND VALVE COVERS NOT SPECIFICALLY SHOWN WITHIN THE LIMITS OF WORK.
7. SEE DETAIL 04 SHEET 2-C7.02 FOR SEWER UTILITY TRENCHING AND BACKFILL.
8. SEE DETAIL 08 SHEET 2-C7.02 FOR WATER UTILITY TRENCHING AND BACKFILL.
9. SAWCUT, REMOVE AND REPLACE EXISTING CURB AS REQUIRED FOR TRENCHING. MATCH EXISTING CURB.

UTILITY PLAN

1-C4.01

HORIZONTAL CONTROL, PAVING, AND STRIPING PLAN

0 10 20 40

1" = 20'

PAVING NOTES:

1. SEE LANDSCAPE PLANS FOR PAVERS, LOCATION AND TYPE OF CONCRETE WALKS AND HARDSCAPE INCLUDING DETAILS FOR CONCRETE FINISHES, CONTROL JOINTS AND EXPANSION JOINTS.
2. VERIFY ALL VEHICULAR AND NON-VEHICULAR LIMITS WITH LANDSCAPE PLANS.

PAVING LEGEND

SYMBOL	DESCRIPTION
30	TEMPORARY COVER INSTALL A TEMPORARY PAVEMENT COVER WHEN AND WHERE NECESSARY TO ACCESS THE SITE IN THE INTERIM CONDITION.
31	CONCRETE PAVEMENT PER STRUCTURAL PLANS.

HORIZONTAL CONTROL NOTES:

THIS HORIZONTAL CONTROL PLAN ESTABLISHES THE FOLLOWING TO BE USED AS BASE CONTROL FOR CONSTRUCTION STAKING.

1. PRIOR TO STAKING ANY BUILDING STRUCTURE, SURVEYOR SHALL VERIFY THAT THE GRIDS SHOWN ON THIS PLAN MATCHES THE ARCHITECTURAL & STRUCTURAL PLANS.
2. TWO COORDINATES ARE PROVIDED TO ESTABLISH THE BUILDING GRID. SEE ARCHITECTURAL AND STRUCTURAL PLANS FOR FINAL BUILDING DIMENSIONS.
3. IF ANY DISCREPANCIES ARE FOUND DURING CONSTRUCTION STAKING NOTIFY CIVIL ENGINEER IMMEDIATELY.
4. SEE LANDSCAPE PLANS FOR DETAILED HARDSCAPE DIMENSIONS.
5. SEE LANDSCAPE PLANS FOR LOCATION AND TYPE OF CONCRETE WALKS AND HARDSCAPE INCLUDING DETAILS FOR CONCRETE FINISHES, CONTROL JOINTS AND EXPANSION JOINTS.
6. SEE PAVING AND STRIPING PLANS FOR LOCATION AND TYPE OF PAVING AND STRIPING.

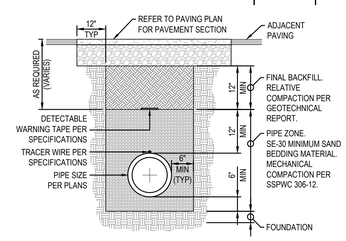
EROSION CONTROL PLAN

1-C6.01



NOTES:

1. THRUST BLOCKS SHALL BE USED FOR PLASTIC PIPE 4" DIAMETER OR LARGER.
2. THRUST BLOCK INSTALLATION PER SSPWC SECTION 306 (LATEST EDITION).
3. THRUST BLOCKS SHALL BE PCC, 450-C-2000 PER SSPWC SECTION 201 (LATEST EDITION).
4. ANCHOR RODS SHALL BE GALVANIZED STEEL, 1/2" DIAMETER, WRAPPED AROUND PIPE.
5. ALL VIEWS ARE PLAN VIEWS UNLESS OTHERWISE NOTED.
6. THRUST BLOCK AREAS ARE BASED ON 200 PSI PRESSURE AND 1,500 PSF ALLOWABLE SOIL BEARING PRESSURE. THRUST BLOCK SIZING PER 2019 NFPA 24, ANNEX A, SECTION A.10.6.1.
7. THRUST BLOCKS SHALL BE INSTALLED AT EVERY CHANGE OF DIRECTION.

HORIZONTAL BEND THRUST BLOCK REQUIRED TOTAL BEARING AREA						
PIPE SIZE (IN)	11¼° BEND	22½° BEND	45° BEND	90° BEND	DEAD END	TEE
	AREA (SF)	AREA (SF)	AREA (SF)	AREA (SF)	AREA (SF)	AREA (SF)
4	0.7	1.4	2.8	5.1	3.6	3.6
6	1.5	2.9	5.7	10.6	7.5	7.5
8	2.5	5.0	9.8	18.2	12.9	12.9
10	3.8	7.6	14.8	27.4	19.4	19.4
12	5.4	10.7	20.9	38.7	27.4	27.4

* BLOCK HEIGHT (H) SHOULD BE CHOSEN SO THAT THE CALCULATED BLOCK WIDTH (B) VARIES BETWEEN ONE AND TWO TIMES THE HEIGHT, NFPA A.10.6.1.

THRUST BLOCKS FOR PLASTIC PIPE - 1500 PSF SOIL BEARING CAPACITY | NTS | 02

NOTES:

1. ALL PIPE SYSTEMS SHALL BE INSTALLED IN ACCORDANCE WITH ASTM D2774, "UNDERGROUND INSTALLATION OF THERMOPLASTIC PRESSURE PIPING", LATEST EDITION.
2. 36" MINIMUM COVER REQUIRED FOR INSTALLATIONS UNDER HARDSCAPE. 30" MINIMUM COVER FOR INSTALLATIONS UNDER PLANTED AREAS.
3. IF UNSTABLE FOUNDATION SOIL IS ENCOUNTERED, THE GEOTECHNICAL FIELD INSPECTOR SHALL DETERMINE OVEREXCAVATION DEPTH AND FOUNDATION RE-FILL MATERIAL.
4. CONTRACTOR SHALL PROVIDE HAND EXCAVATED "BELL HOLE" FOR EACH PIPE JOINT SO THAT THE WEIGHT OF PIPE DOES NOT BEAR ON THE BELL. CONTRACTOR SHALL RE-FILL AND HAND-TAMP EACH "BELL HOLE" PRIOR TO COMPLETING THE PLACEMENT OF PIPE BEDDING.

PIPE TRENCH - WATER | NTS | 03

GENERAL EROSION AND SEDIMENT CONTROL NOTES

1. CONTRACTOR SHALL ENSURE THAT THE CONSTRUCTION SITE IS PREPARED PRIOR TO THE START OF CONSTRUCTION. CONTRACTOR SHALL HAVE ALL EROSION AND SEDIMENT CONTROL MEASURES IN PLACE AT ALL TIMES DURING CONSTRUCTION.
2. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE MAINTAINED UNTIL DISTURBED AREAS ARE STABILIZED.
3. THIS PLAN MAY NOT COVER ALL THE SITUATIONS THAT ARISE DURING CONSTRUCTION DUE TO UNANTICIPATED FIELD CONDITIONS.
4. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE CHECKED BEFORE AND AFTER ALL STORMS TO ENSURE MEASURES ARE FUNCTIONING PROPERLY.
5. CONTRACTOR SHALL MAINTAIN A LOG AT THE SITE OF ALL INSPECTIONS OR MAINTENANCE OF BMPS, AS WELL AS, ANY CORRECTIVE CHANGES TO THE BMPS OR EROSION AND SEDIMENT CONTROL PLAN.
6. IN AREAS WHERE SOIL IS EXPOSED, PROMPT REPLANTING WITH NATIVE COMPATIBLE, DROUGHT-RESISTANT VEGETATION SHALL BE PERFORMED. NO AREAS WILL BE LEFT EXPOSED OVER THE WINTER SEASON.
7. THE CONTRACTOR SHALL INSTALL THE STABILIZED CONSTRUCTION ENTRANCE PRIOR TO COMMENCEMENT OF GRADING. LOCATION OF THE ENTRANCE MAY BE ADJUSTED BY THE CONTRACTOR TO FACILITATE GRADING OPERATIONS. ALL CONSTRUCTION TRAFFIC ENTERING THE PAVED ROAD MUST CROSS THE STABILIZED CONSTRUCTION ENTRANCE.
8. ALL SEDIMENT DEPOSITED ON PAVED ROADWAYS SHALL BE SWEPT AT THE END OF EACH WORKING DAY OR MORE OFTEN AS NECESSARY.
9. CONTRACTOR SHALL PLACE GRAVEL/SAND BAGS AROUND ALL NEW DRAINAGE STRUCTURE OPENINGS IMMEDIATELY AFTER THE STRUCTURE OPENING IS CONSTRUCTED. THESE GRAVEL/SAND BAGS SHALL BE MAINTAINED AND REMAIN IN PLACE UNTIL CONSTRUCTION IS COMPLETED.
10. CONTRACTOR SHALL IMPLEMENT HOUSEKEEPING PRACTICES AS FOLLOWS:
    A. SOLID WASTE MANAGEMENT:
    PROVIDE DESIGNATED WASTE COLLECTION AREAS AND CONTAINERS. ARRANGE FOR REGULAR REMOVAL AND DISPOSAL. CLEAR SITE OF TRASH INCLUDING ORGANIC DEBRIS, PACKAGING MATERIALS, SCRAP OR SURPLUS BUILDING MATERIALS AND DOMESTIC WASTE DAILY.
    B. MATERIAL DELIVERY AND STORAGE:
    PROVIDE A DESIGNATED MATERIAL STORAGE AREA WITH SECONDARY CONTAINMENT SUCH AS BERMING. STORE MATERIAL ON PALLETS AND PROVIDE COVERING FOR SOLUBLE MATERIALS. RELOCATE STORAGE AREA INTO BUILDING SHELL WHEN POSSIBLE. INSPECT AREA WEEKLY.
    C. CONCRETE WASTE:
    PROVIDE A DESIGNATED AREA FOR A TEMPORARY PIT TO BE USED FOR CONCRETE TRUCK WASH-OUT. CONCRETE WASHOUT CANNOT BE WITHIN 50' MINIMUM OF DRAIN INLETS. DISPOSE OF HARDENED CONCRETE OFFSITE. AT NO TIME SHALL A CONCRETE TRUCK DUMP ITS WASTE AND CLEAN ITS TRUCK INTO THE STORM DRAINS VIA CURB AND GUTTER. INSPECT DAILY TO CONTROL RUNOFF, AND WEEKLY FOR REMOVAL OF HARDENED CONCRETE.
    D. PAINT AND PAINTING SUPPLIES:
    PROVIDE INSTRUCTION TO EMPLOYEES AND SUBCONTRACTORS REGARDING REDUCTION OF POLLUTANTS INCLUDING MATERIAL STORAGE, USE, AND CLEAN UP. INSPECT SITE WEEKLY FOR EVIDENCE OF IMPROPER DISPOSAL.
    E. VEHICLE FUELING, MAINTENANCE AND CLEANING:
    PROVIDE A DESIGNATED FUELING AREA WITH SECONDARY CONTAINMENT SUCH AS BERMING. DO NOT ALLOW MOBILE FUELING OF EQUIPMENT. PROVIDE EQUIPMENT WITH DRIP PANS. RESTRICT ONSITE MAINTENANCE AND CLEANING OF EQUIPMENT TO A MINIMUM. INSPECT AREA WEEKLY.
    F. HAZARDOUS WASTE MANAGEMENT:
    PREVENT THE DISCHARGE OF POLLUTANTS FROM HAZARDOUS WASTES TO THE DRAINAGE SYSTEM THROUGH PROPER MATERIAL USE, WASTE DISPOSAL AND TRAINING OF EMPLOYEES. HAZARDOUS WASTE PRODUCTS COMMONLY FOUND ON-SITE INCLUDE BUT ARE NOT LIMITED TO PAINTS & SOLVENTS, PETROLEUM PRODUCTS, FERTILIZERS, HERBICIDES & PESTICIDES, SOIL STABILIZERS, STABILIZATION PRODUCTS, ASPHALT PRODUCTS AND CONCRETE CURING PRODUCTS.
11. CONTRACTOR SHALL HYDROSEED ALL GRADED SLOPES. NATIVE SEED MIX SHALL BE 20% LANA PUBESCENT WHEAT GRASS, 40% BLANDO BROME, AND 40% ANNUAL RYE GRASS AND SHALL BE APPLIED AT A RATE OF 200 POUNDS PER ACRE. SOIL BINDING AGENT SHALL BE VERDYOL, SENTINEL, OR EQUAL, APPLIED AT A RATE OF 110 POUNDS PER ACRE. MULCH SHALL BE SILVER-FIBER, CONWED, OR EQUAL, APPLIED AT A RATE OF 1,000 POUNDS PER ACRE. FERTILIZER SHALL BE AGRI-FORM 16-7-12, BEST 16-6-8, OR EQUAL, APPLIED AT A RATE OF 500 POUNDS PER ACRE. THE CONTRACTOR SHALL WATER SEEDED AREAS OR RESEED AS NECESSARY TO ENSURE SUFFICIENT PLANT DEVELOPMENT FOR EROSION CONTROL.
12. NO GRADING SHALL BE DONE UNTIL SITE- AND SEASON-SPECIFIC SOIL LOSS AND HOUSEKEEPING STORMWATER BMPs HAVE BEEN APPROVED BY THE INSPECTOR. THE CONTRACTOR SHOULD EMPLOY THE DESIGN BMPs AND ANY OTHERS NEEDED AS SITUATIONS ARISE. CONTRACTOR SHOULD CONDUCT SITE INSPECTIONS BEFORE, DURING AND AFTER EACH EXTENDED STORM EVENT TO IDENTIFY CONDITIONS THAT MAY CONTRIBUTE TO EROSION AND SEDIMENT PROBLEMS OR ANY OTHER POLLUTANT DISCHARGES. IF ADDITIONAL CONTROL MEASURES ARE NEEDED, CONTRACTOR SHOULD IMPLEMENT THEM IMMEDIATELY.

POLLUTION PREVENTION NOTES

IN ORDER TO MEET THE REQUIREMENTS OF THE NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PROGRAM FOR CONSTRUCTION, CONSTRUCTION CONTRACTORS SHALL INSTALL AND MAINTAIN APPROPRIATE BEST MANAGEMENT PRACTICES (BMPS), AS SHOWN IN THE EROSION CONTROL PLAN AND IN ACCORDANCE WITH THE SWPPP (STORM WATER POLLUTION PREVENTION PLAN), ON ALL CONSTRUCTION PROJECTS. BMPS SHALL BE INSTALLED IN ACCORDANCE WITH INDUSTRY RECOMMENDED STANDARDS, AND/OR IN ACCORDANCE WITH ANY GENERAL CONSTRUCTION PERMIT ISSUED BY THE STATE FOR THE PROJECT TO PREVENT ANY DISCHARGES FROM THE PROJECT SITE OR INTO ANY STORM DRAIN FACILITIES. ALL SEDIMENTS, CONSTRUCTION MATERIALS, DEBRIS AND WASTES, AND OTHER POLLUTANTS MUST BE RETAINED ON SITE AND MAY NOT BE TRANSPORTED FROM THE SITE VIA SHEET FLOW, SWALES, AREA DRAINS, NATURAL DRAINAGE COURSES, WIND, OR VEHICLE TRACKING. UNDER DIRECTION OF THE ENGINEER OF RECORD, EROSION AND/OR SEDIMENT CONTROL DEVICES SHALL BE MODIFIED AS NEEDED AS THE PROJECT PROGRESSES TO ENSURE EFFECTIVENESS.

BMP MAINTENANCE NOTES

1. FOLLOWING OWNER ACCEPTANCE OF CONSTRUCTION WORK, POST CONSTRUCTION BEST MANAGEMENT PRACTICE (BMP) MEASURES SHALL BE MAINTAINED BY THE PROPERTY OWNER, INCLUDING BUT NOT LIMITED TO:
    1.1. ANNUAL INSPECTION, REPLACEMENT, AND/OR SEDIMENTATION REMOVAL OF VEGETATED SWALES, TREATMENT PONDS, AND OTHER SURFACE STORMWATER TREATMENT MEASURES AS REQUIRED WITH AN INCREASED FREQUENCY BASED ON SITE CONDITIONS.
    1.2. MAINTENANCE SERVICE AGREEMENT(S) OF STORMWATER TREATMENT VAULTS, INLETS, MANHOLES, AND OTHER DEVICES BASED ON MANUFACTURES' RECOMMENDATIONS AND FREQUENCY.
    1.3. ANNUAL INSPECTION OF PERMEABLE PAVEMENT AND REMOVAL OF SEDIMENT AS NEEDED.
    1.4. ANNUAL INSPECTION OF STORMWATER INLETS AND MAINTENANCE AS REQUIRED TO CLEAR GRATES AND INLETS OF DEBRIS.
    1.5. THE PROJECT STORMWATER POLLUTION PREVENTION PLAN (SWPPP) AND WATER QUALITY MANAGEMENT PLAN (WQMP) MAY CONTAIN ADDITIONAL OR MORE STRINGENT MAINTENANCE REQUIREMENTS.
2. BMP DETAILS MAY BE FOUND IN APPENDIX H OF THE PROJECT SWPPP DOCUMENT. BMP DETAILS PER CALIFORNIA STORMWATER QUALITY ASSOCIATION (CASQA) AND ARE AVAILABLE AT www.casqa.org.
3. FOR PROJECTS GREATER THAN 1 ACRE: THE CONTRACTOR SHALL VERIFY THE STATUS OF THE SWPPP/NOI/WDID PRIOR TO EARTHMOVING ACTIVITIES. A STORMWATER POLLUTION PREVENTION PLAN (SWPPP) SHALL BE PREPARED AND A NOTICE OF INTENT (NOI) SHALL BE FILED WITH THE STATE WATER RESOURCES CONTROL BOARD (SWRCB) IN ACCORDANCE WITH THE REQUIREMENTS OF CALIFORNIA GENERAL PERMIT FOR STORMWATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY (PERMIT NO. CAS000002) FOR ALL OPERATIONS ASSOCIATED WITH THESE PLANS. THE CONTRACTOR SHALL KEEP A COPY OF THE SWPPP ON SITE AND AVAILABLE FOR REVIEW.

AREA SUMMARY

TOTAL DISTURBED AREA = 3.35± ACRES

DEMOLITION NOTES

1. THE INTENT OF THE DEMOLITION PLAN IS TO DESCRIBE IN GENERAL THE DEMOLITION AREAS AFFECTED BY THE PROJECT CONSTRUCTION. IT IS NOT INTENDED AS A DETAILED DESCRIPTION OF EXISTING ITEMS OR ELEMENTS TO BE REMOVED. THE CONTRACTOR SHALL VISIT THE SITE AND REVIEW ANY AVAILABLE RECORD DOCUMENTS TO BECOME FAMILIAR WITH THE EXISTING CONDITIONS AND SHOULD INCLUDE THE REMOVAL OF ALL ITEMS NECESSARY FOR THE PROPER EXECUTION AND COMPLETION OF THE WORK. THE CONTRACT DOCUMENTS ARE COMPLEMENTARY, AND WHAT IS REQUIRED BY ONE SHALL BE BINDING AS IF REQUIRED BY ALL TO THE EXTENT THAT IT IS REASONABLY INFERABLE FROM THEM AS BEING NECESSARY TO PRODUCE THE INTENDED RESULTS.
2. REMOVE EXISTING BUILDINGS, FOUNDATIONS AND SERVICE UTILITIES AS INDICATED ON PLANS. CAP ALL UTILITIES AT APPROPRIATE POINTS. ALL EXISTING ELECTRICAL / TELEPHONE / CATV UTILITIES SHALL BE REMOVED AS INDICATED OR BACK TO THE POINT WHERE THE SPECIFIC UTILITY SYSTEM ENTERS THE WORK AREA. COORDINATE DEMOLITION OF ALL UTILITIES WITH THE OWNER. ALL UTILITIES CONNECTED TO EXISTING BUILDINGS TO REMAIN SHALL CONTINUE TO BE OPERATIONAL DURING THE DEMOLITION PROCESS. DOMESTIC AND FIRE SERVICE WATER AND NATURAL GAS SHALL BE REMOVED TO A POINT OUTSIDE THE PERIMETER OF PROPOSED NEW CONSTRUCTION TO EXISTING VALVES OR SIMILAR SHUT-OFF DEVICES. IF A SHUT-OFF DEVICE IS NOT REASONABLY ADJACENT TO THE PERIMETER OF THE PROPOSED NEW CONSTRUCTION, PROVIDE A SHUT-OFF DEVICE IN BELOW-GRADE YARD BOX. CONFIRM LOCATION OF NEW DEVICES WITH OWNER PRIOR TO INSTALLATION. SANITARY SEWER AND STORM DRAINAGE SHALL BE CAPPED TO A POINT OUTSIDE THE PERIMETER OF THE PROPOSED NEW CONSTRUCTION. OTHER UTILITIES NOT SPECIFICALLY IDENTIFIED IN THESE DOCUMENTS AND NOT ANTICIPATED FOR REUSE SHALL BE REMOVED IN ENTIRETY.
3. FOR ALL EXISTING MATERIALS THAT CAN BE SALVAGED, OWNER HAS FIRST RIGHT OF REFUSAL FOR REMOVED ITEMS THAT MAY HAVE RESIDUAL COMMERCIAL OR HISTORIC VALUE INCLUDING, BUT NOT LIMITED TO, GLASS, CORNER STONES, TIME CAPSULES, LIGHT STANDARDS, SIGNS, FENCING, BENCHES, WATER FOUNTAINS, TRASH CONTAINERS, ETC. SHALL REMAIN AS PROPERTY OF THE OWNER. ALL ITEMS TO BE SALVAGED FOR REUSE/REINSTALLATION MUST MEET CURRENT CODE REQUIREMENTS. COORDINATE ITEMS TO BE RETAINED WITH OWNER AND REMOVE FROM CONSTRUCTION SITE TO A LOCATION APPROVED BY OWNER. REMOVED MATERIALS, NOT INDICATED OR DIRECTED TO BE SALVAGED FOR THE OWNER'S BENEFIT ARE DEBRIS AND BECOME THE CONTRACTOR'S PROPERTY UPON REMOVAL.
4. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THESE PLANS ARE OBTAINED BY SEARCH OF THE AVAILABLE RECORDS AND FIELD SURVEYS. THE CONTRACTOR SHALL CONTACT UNDERGROUND SERVICE ALERT, UTILITY COMPANIES, AND/OR FIELD VERIFY AND LOCATE ALL UTILITIES BEFORE PROCEEDING WITH WORK. THE CONTRACTOR IS ALSO REQUIRED TO TAKE DUE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN AND ANY OTHER LINES NOT OF RECORD OR NOT SHOWN ON THESE PLANS. NOTIFY THE ENGINEER IF ADDITIONAL UTILITIES ARE LOCATED OR IF CONFLICTS ARE FOUND WITH EXISTING CONDITIONS.
5. ALL TREES TO BE REMOVED SHALL BE MARKED BY CONTRACTOR AND APPROVED FOR REMOVAL BY THE OWNER OR OWNER'S REPRESENTATIVE PRIOR TO REMOVING OR CUTTING TREE(S). EXISTING ROOTS SHALL BE GRINDED TO A DEPTH OF APPROXIMATELY 3-FEET. USE CAUTION WHILE GRINDING WHEN EXISTING UTILITIES ARE IN CLOSE PROXIMITY TO TREES. ALL TREES TO REMAIN WITHIN THE LIMIT OF WORK SHALL BE PROTECTED AND MAINTAINED PER SPECIFICATIONS AND DETAILS.
6. SAWCUT EXISTING CONCRETE AND ASPHALT TO AN EXISTING CONTROL JOINT WHERE POSSIBLE, AT MINIMUM TO A NEAT-STRAIGHT LINE. ALL DEBRIS SHALL BE HAULED OFFSITE TO A LEGAL DUMPING SITE OR SALVAGED FOR REUSE ON PROJECT AS NOTED.
7. WORK WITHIN CITY, COUNTY, OR STATE RIGHT-OF-WAY REQUIRES A SEPARATE ENCROACHMENT PERMIT WHICH THE CONTRACTOR IS RESPONSIBLE FOR OBTAINING PRIOR TO STARTING WORK WITHIN RIGHT-OF-WAY.
8. CONTRACTOR TO COORDINATE UTILITY DEMOLITION WITH DRAINAGE AND UTILITY WORK SHOWN IN THIS PLAN SET. ALL UTILITY SHUTDOWNS SHALL BE COORDINATED PER PROJECT SPECIFICATIONS.
9. EXISTING DRY UTILITIES SHOWN FOR DEMOLITION ARE SHOWN FOR COORDINATION ONLY. REFER TO OTHER DISCIPLINES FOR LIMITS AND DETAILS OF DEMOLITION.
10. THE CONTRACTOR SHALL RECYCLE CONSTRUCTION DEBRIS, ASPHALT, AND CONCRETE GENERATED FROM REMOVALS REQUIRED TO CONSTRUCT THE PROJECT. THE CONTRACTOR IS OBLIGATED, UNDER THIS CONTRACT, TO RECYCLE THE WASTE MATERIAL THROUGH AN APPROVED RECYCLING PLANT.
11. A LIST OF FACILITIES THAT ACCEPT CONSTRUCTION & DEMOLITION DEBRIS CAN BE FOUND ON THE CALRECYCLE WEBSITE AT: HTTPS://WWW.CALRECYCLE.CA.GOV/CONDEMO
12. CONTRACTOR IS RESPONSIBLE FOR PROTECTING EXISTING BUILDING FINISHES DURING DEMOLITION. ANY FINISH THAT IS DAMAGED DURING DEMOLITION SHALL BE REPAIRED OR REPLACED IN-KIND OR BETTER.

GENERAL NOTES TO CONTRACTOR

1. THE CONTRACTOR SHALL CONTACT THE RESPECTIVE UTILITY OWNERS FOR LOCATION, REMOVAL, AND/OR RELOCATION OF ANY UTILITY SERVICES AFFECTED BY CONSTRUCTION. THE CONTRACTOR SHALL TAKE ALL NECESSARY PRECAUTIONARY MEASURES TO PROTECT UNDERGROUND OR OVERHEAD STRUCTURES WHETHER OR NOT THEY ARE SHOWN ON THESE DRAWINGS.
2. THE CONTRACTOR SHALL NOTIFY THE PROJECT INSPECTOR AND THE RESPECTIVE UTILITY OWNERS AND OTHER AGENCIES AT LEAST TWO WORKING DAYS PRIOR TO START OF CONSTRUCTION.
3. THE CONTRACTOR SHALL BE RESPONSIBLE FOR EXPOSING, VERIFYING LOCATIONS (BOTH HORIZONTAL AND VERTICAL), AND MAINTAINING ALL EXISTING UNDERGROUND UTILITIES, BOTH SHOWN ON THE PLANS AND/OR NOT SHOWN ON THE PLANS DURING CONSTRUCTION. REPAIR DAMAGED UTILITIES TO THE SATISFACTION OF THE ENGINEER. THE CONTRACTOR SHALL LOCATE EXISTING UNDERGROUND UTILITIES SUFFICIENTLY AHEAD OF CONSTRUCTION TO PERMIT REVISIONS TO PLANS BECAUSE OF LOCATIONS OF EXISTING FACILITIES AND SHALL REPORT ALL DISCREPANCIES TO THE ENGINEER PRIOR TO THE COMMENCEMENT OF WORK.
4. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITIES AND/OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. APPROVAL OF THESE PLANS DOES NOT CONSTITUTE A REPRESENTATION AS TO THE ACCURACY OR COMPLETENESS OF THE LOCATION OR THE EXISTENCE, OR NON-EXISTENCE OF ANY UTILITY AND/OR STRUCTURE WITHIN THE LIMITS OF THIS PROJECT. THE CONTRACTOR IS REQUIRED TO TAKE ALL DUE PRECAUTIONARY MEASURES TO PROTECT THE UTILITIES OF RECORD AND/OR NOT OF RECORD SHOWN OR NOT SHOWN AND ANY OTHER LINE(S) OR STRUCTURE(S) NOT SHOWN ON THESE PLANS. THE CONTRACTOR IS RESPONSIBLE FOR THE PROTECTION OF, AND/OR DAMAGE TO THESE LINE(S) AND/OR STRUCTURE(S).
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR TEMPORARY SHORING AT PROPOSED BUILDING FOUNDATIONS, FOOTINGS, AND WALLS TO PROTECT EXISTING UTILITIES IN PLACE.
6. UNAUTHORIZED CHANGES AND USES - CAUTION: THE ENGINEER PREPARING THESE PLANS WILL NOT BE RESPONSIBLE FOR, OR LIABLE FOR, UNAUTHORIZED CHANGES TO OR USES OF THESE PLANS. ALL CHANGES TO THE PLANS MUST BE IN WRITING AND MUST BE APPROVED BY THE PREPARER OF THESE PLANS.
7. THE CONTRACTOR SHALL MAINTAIN THE EXISTING ACCESSIBLE ROUTE CLEAR OR PROVIDE AN ALTERNATE ACCESSIBLE ROUTE OF TRAVEL DURING DEMOLITION AND/OR CONSTRUCTION.
8. THE CONTRACTOR SHALL MAINTAIN THE EXISTING FIRE EXITS AND STAIRS CLEAR AND USABLE OR PROVIDE ALTERNATE FIRE EXITS DURING DEMOLITION AND/OR CONSTRUCTION.

EARTHWORK NOTES

1. IT IS THE CONTRACTOR'S RESPONSIBILITY TO REVIEW THE GRADING PLANS AND SOILS REPORT THOROUGHLY PRIOR TO SITE MOBILIZATION. IT IS ALSO THE GRADING CONTRACTOR'S RESPONSIBILITY TO NOTIFY THE CIVIL AND SOILS ENGINEERS IF ONSITE DISCREPANCIES ARE OBSERVED THAT WOULD AFFECT THE EARTHWORK QUANTITIES.
2. THE EXISTING TOPOGRAPHY AS DELINEATED ON THESE DRAWINGS SHALL BE UTILIZED AS THE BASIS FOR ALL EARTHWORK COMPUTATIONS. SAID TOPOGRAPHY SHALL BE PRESUMED TO BE ACCEPTABLE TO ALL INTERESTED PARTIES UNLESS A DEVIATION IS FOUND PRIOR TO THE START OF GRADING IN ANY SPECIFIC AREAS. ANY DEVIATION SO DETERMINED SHALL BE PROMPTLY TRANSMITTED TO ALL INTERESTED PARTIES.
3. THE CONTRACTOR IS REQUIRED TO ESTIMATE THE QUANTITIES OF GRADING WORK TO BE DONE AND INCLUDE ALL COSTS THEREFROM WITH HIS BID, AS NO ADDITIONAL ALLOWANCE WILL BE MADE WITHOUT PRIOR CONSENT FROM THE OWNER.
4. OVER-EXCAVATION AND/OR EXCESS BACKFILLING OR DUPLICATION OF GRADING ACTIVITIES IS NOT A BASIS FOR ADDITIONAL COMPENSATION. THIS ALSO APPLIES WHERE MATERIAL IS TO BE REMOVED AND REPLACED TO REDUCE MOISTURE CONTENT.
5. OFF-SITE DISPOSAL OF EXCAVATION MATERIAL IS THE RESPONSIBILITY OF THE CONTRACTOR AND SHALL BE INCLUDED IN THE BID. THE CONTRACTOR SHALL HOLD THE OWNER AND ENGINEER HARMLESS AS A RESULT OF ANY CLAIMS ARISING FROM THE ACTIONS ENROUTE OR AWAY FROM THE SITE.
6. EARTH VOLUMES SHOWN HEREON ARE ESTIMATES BASED UPON THE GEOTECHNICAL ANALYSIS PERFORMED BY THE NAMED SOILS ENGINEER AND TOPOGRAPHIC SURVEY OF THE EXISTING GROUND SURFACE AT THE TIME OF PLAN PREPARATION. EARTHWORK VOLUMES ARE COMPUTED BY METHODS COMMONLY USED IN STANDARD ENGINEERING PRACTICE, AND ARE INTENDED FOR USE IN ESTABLISHING GOVERNING AGENCY FEES. ACTUAL FIELD CONDITIONS MAY VARY FROM OBSERVED OR MEASURED CONDITIONS AT THE TIME OF PLAN PREPARATION. EARTHWORK QUANTITIES MAY VARY AS A RESULT.
7. ANY EXPORT OR IMPORT REQUIRED TO BALANCE THE SITE SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR.
8. PAVEMENT AND SUBGRADE RECOMMENDATIONS RELATED TO OVER-EXCAVATION, PAVEMENT SUBGRADE, ETC., PER GEOTECHNICAL REPORT.

GEOTECHNICAL INFORMATION

FOR SITE PREPARATION, OVEREXCAVATION, FOUNDATION RECOMMENDATIONS, PAVEMENT, SUBGRADE, AND GRADATION REQUIREMENTS SEE GEOTECHNICAL INVESTIGATION REPORT ENTITLED:

"GEOTECHNICAL EXPLORATION REPORT
MALIBU MIDDLE AND HIGH SCHOOL CAMPUS
PHASE II IMPROVEMENTS
PROPOSED AQUATIC CENTER, MIDDLE SCHOOL BUILDING, AND GYMNASIUM
30215 MORNING VIEW DRIVE
MALIBU, LOS ANGELES COUNTY, CALIFORNIA "

PREPARED BY:	LEIGHTON CONSULTING, INC. 2600 MICHELSON DRIVE, SUITE 400 IRVINE, CALIFORNIA 92612
PROJECT NO:	036.0000025785
DATED:	OCT 16, 2024
REVISED:	MAY 23, 2025

EARTHWORK QUANTITIES

APPROXIMATE CUT:	8,140 CY
APPROXIMATE FILL:	4,303 CY
NET:	3,837 CY (EXPORT)

NOTE:
EARTHWORK QUANTITIES INDICATED ARE FOR REFERENCE ONLY (NOT FOR BID OR PAYMENT). THE CONTRACTOR IS RESPONSIBLE FOR ACTUAL QUANTITIES.

HAUL ROUTE TO BE DETERMINED AT PRE-GRADE MEETING AND ALL NECESSARY PERMITS SHALL BE OBTAINED BY THE GENERAL CONTRACTOR

NOTE: PROJECT GEOTECHNICAL CONSULTANT HAS RECOMMENDED THAT ADDITIONAL EXPANSION INDEX TESTING BE PERFORMED AFTER THE COMPLETION OF GRADING TO QUANTIFY THE EI VALUES PRESENTED IN THE REPORT.

BENCHMARK

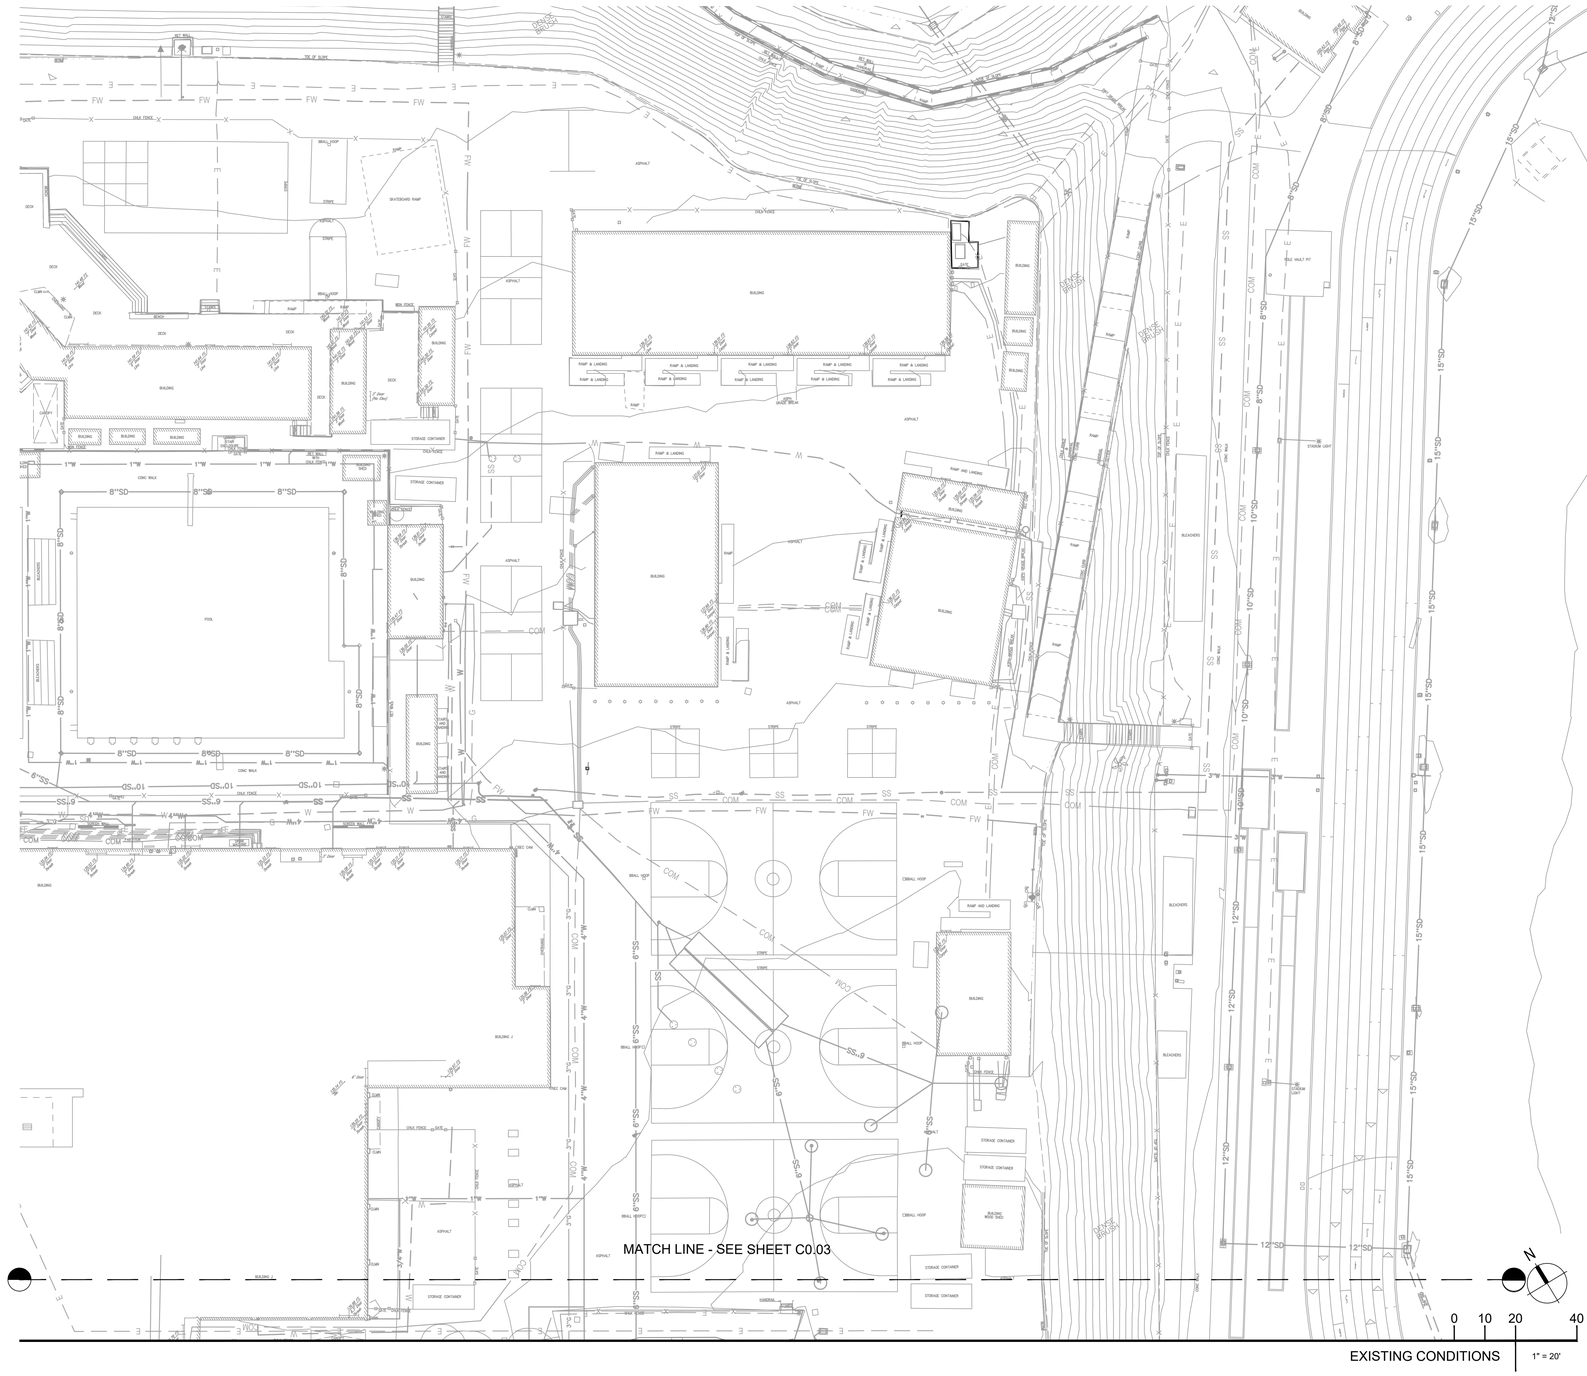
US NATIONAL GEODETIC SURVEY
PID NO: EW4180, EW1593, EW6821, EW4188, EW4106, EW4113, EW4205, EW4212, AE1725, AE1722
NAVD 88 DATUM

DATUM STATEMENT

STATE PLANE COORDINATES, CALIFORNIA SYSTEM ZONE 5 BASED ON NAD83 (CORS96) (EPOCH: 2002.0000) REFERENCE FRAME. THE HORIZONTAL COORDINATE VALUES SHOWN HEREON ARE BASED UPON LOCAL CONTROL POINTS AND DERIVED FROM THE GPS STATIC OBSERVATIONS THAT WERE POST-PROCESSED USING ON-LINE POSITIONING USER SERVICE (OPUS) PROVIDED BY THE US NATIONAL GEODETIC SURVEY.

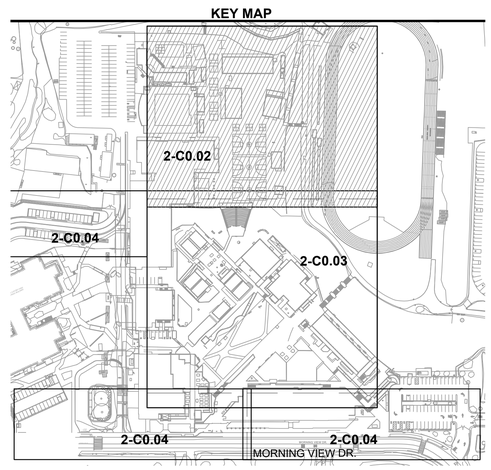
VERTICAL VALUES ARE BASED UPON NORTH AMERICAN VERTICAL DATUM OF 1988 USING THE FOLLOWING US NATIONAL GEODETIC SURVEY BENCHMARKS: EW4180, EW1593, EW6821, EW4188, EW4106, EW4113, EW4205, EW4212, AE1725, AE1722. SEE SHEET 1 OF SEE PSOMAS MAP "AERIAL TOPOGRAPHIC SURVEY, UTILITY LOCATIONS AND EASEMENT EXHIBIT" JOB NO. 1SAN080102 TASK 100 FOR THE BENCHMARK DESCRIPTION.

BASIS OF BEARINGS



THE BOUNDARY LINES SHOWN HEREON ARE BASED UPON RECOVERED CITY, COUNTY AND/OR PRIVATE SURVEY MONUMENTS. SEE PSOMAS MAP "BOUNDARY SURVEY"

LEGAL DESCRIPTION



PARCELS 10, 11 AND 12 IN BLOCK 5 AS SHOWN ON THE RECORD OF SURVEY FILE DIN BOOK 56 PAGES 14 TO 17 INCLUSIVE OF RECORDS OF SURVEY, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

DEMOLITION PLAN

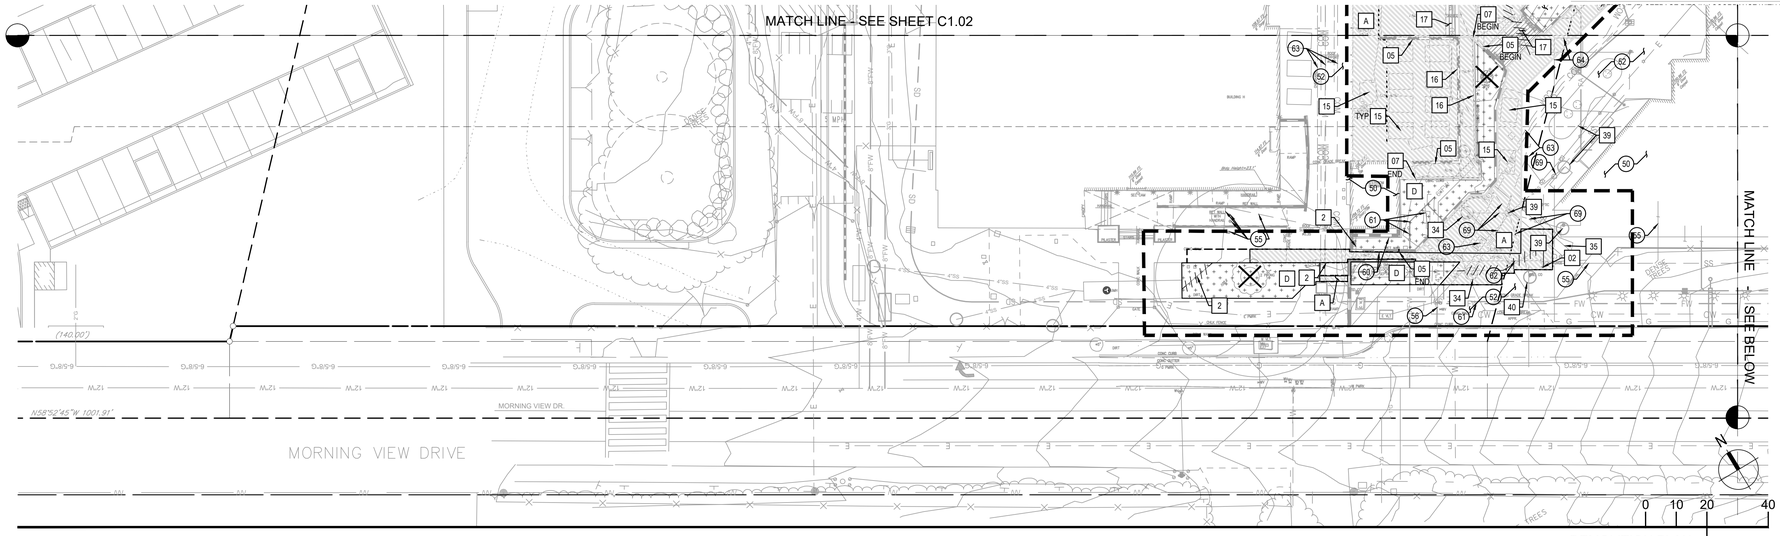
2-C1.02

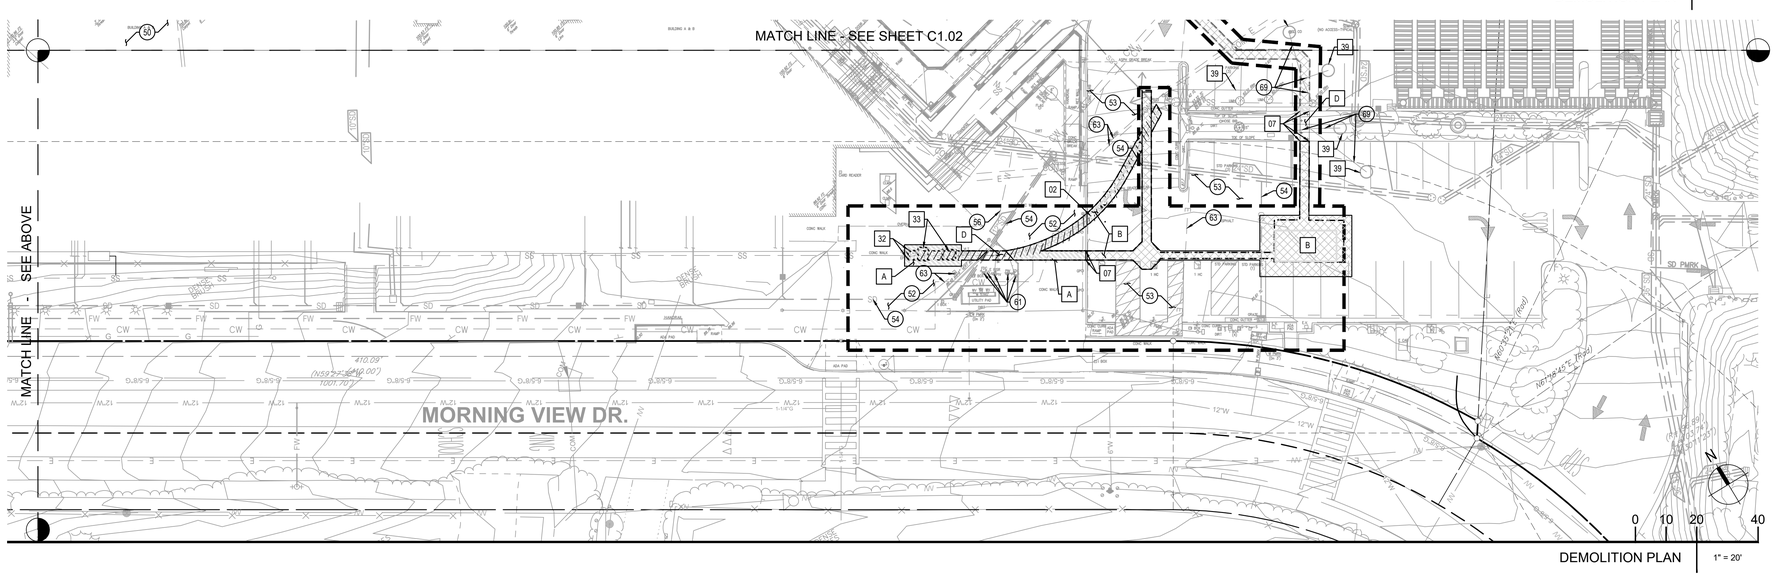
DEMOLITION NOTES

-SEE DEMOLITION NOTES, SHEET C0.01.

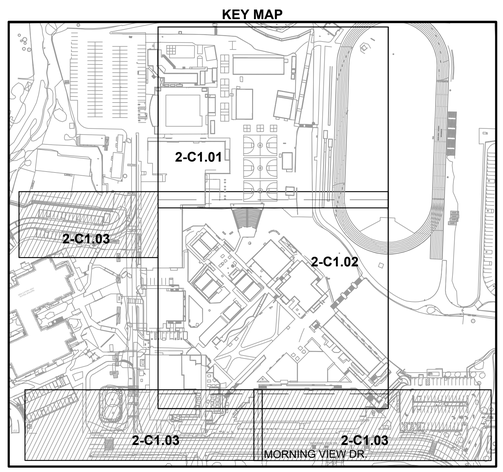
DEMOLITION LEGEND



LABEL	DESCRIPTION
A	REMOVE (E) CONCRETE PAVEMENT/SIDEWALK. SEE DEMOLITION NOTE 10 SHEET C0.01.
B	REMOVE (E) AC PAVEMENT. SEE DEMOLITION NOTE 10 SHEET C0.01.
C	REMOVE (E) BUILDING STRUCTURE. SEE DEMOLITION NOTE 2 SHEET C0.01.
D	REMOVE (E) LANDSCAPING/DIRT. SEE LANDSCAPE AND IRRIGATION PLANS FOR IMPROVEMENTS.
E	REMOVE (E) ARTIFICIAL TURF.
	REMOVE (E) TREE. SEE DEMOLITION NOTE 5 SHEET C0.01.
	(E) TREE TO REMAIN AND BE PROTECTED. SEE DEMOLITION NOTE 5 SHEET C0.01.
	SAWCUT (E) PAVEMENT AS NEEDED. SEE DEMOLITION NOTE 6 AND 10 SHEET C0.01.
	APPROXIMATE LIMIT OF WORK.
	REMOVE (E) UTILITY. SEE DEMOLITION NOTES 2, 4, 8, AND 9 SHEET C0.01.



DEMOLITION KEYNOTES



KEY NOTE	DESCRIPTION
01	REMOVE (E) STORM DRAIN PIPE AND APPURTENANCES. SEE 2-C3.01 - 2-C3.02 PLAN FOR IMPROVEMENTS.
02	REMOVE (E) SANITARY SEWER PIPE AND APPURTENANCES. SEE UTILITY PLAN FOR IMPROVEMENTS.
03	REMOVE (E) WATER PIPE AND APPURTENANCES. SEE UTILITY PLAN FOR IMPROVEMENTS.
04	REMOVE (E) BIKE RACK.
05	REMOVE (E) RETAINING WALL AND FOOTING.
06	REMOVE (E) PLANTER.
07	REMOVE (E) CURB AND/OR CURB AND GUTTER.
08	REMOVE AND REPLACE (E) BERM.
09	REMOVE (E) FENCE AND FOOTINGS. SEE LANDSCAPE PLANS FOR IMPROVEMENTS.
10	REMOVE (E) LIGHT STANDARD AND FOOTING. SEE ELECTRICAL PLANS FOR IMPROVEMENTS.
11	REMOVE (E) GAS FACILITIES.
12	REMOVE (E) ELECTRICAL CONDUITS OR FACILITIES. SEE ELECTRICAL PLANS FOR DETAIL AND IMPROVEMENTS.
13	REMOVE (E) RAMP, LANDING AND HANDRAIL.
14	REMOVE (E) AMPHITHEATER AND ASSOCIATED FEATURES.
15	REMOVE (E) BENCH.
16	REMOVE (E) HANDRAIL.
17	REMOVE (E) STAIRS AND HANDRAILS IF PRESENT.
18	REMOVE (E) VALLEY GUTTER.
19	SALVAGE (E) MEMORIAL PLAQUE AND RETURN TO DISTRICT.
20	SALVAGE (E) BENCH WITH MEMORIAL PLAQUE AND RETURN TO DISTRICT.
21	SALVAGE (E) BOULDER WITH MEMORIAL PLAQUE AND RETURN TO DISTRICT.
22	REMOVE (E) GRAVEL.
23	REMOVE (E) STRIPING.
24	SALVAGE (E) BASKETBALL POLE AND ALL ASSOCIATED COMPONENTS BUT NOT LIMITED TO IE BACKSTOP/EXTENSION, RIM/GOAL/NETTING, POLE PADDING, AND RETURN TO DISTRICT FOR REUSE. SEE LANDDSCAPE PLANS FOR INSTALLATION IMPROVEMENT AND LOCATION.
25	REMOVE (E) TELECOMMUNICATION FACILITIES. SEE ELECTRICAL PLANS FOR IMPROVEMENTS.
26	REMOVE (E) CONCRETE BENCH.
27	REMOVE (E) CANOPY OVERHANG, COLUMNS, AND FOOTINGS.
28	REMOVE (E) IRRIGATION FACILITIES.
29	REMOVE (E) SEPTIC SEWER TANK AND ASSOCIATED FACILITIES IN ACCORDANCE WITH LOCAL AND STATE GUIDELINES. REMEDIATE (E) SOIL AS REQUIRED.
30	SALVAGE AND RELOCATE (E) STORAGE CONTAINER. FINAL LOCATION PER DISTRICT.
31	REMOVE AND REPLACE (E) CHAIN LINK FENCE.
32	REMOVE (E) ELECTRIC PULL BOX.
33	REMOVE (E) SEPTIC PUMP AND VAULT.
34	REMOVE (E) SEEPAGE PITS IN ACCORDANCE WITH LOCAL AND STATE GUIDELINES. REMEDIATE (E) SOIL AS REQUIRED.
35	REMOVE (E) TRACTION PAD.
36	REMOVE (E) GUARD POST.
37	(E) SEWER MAIN TO BE ABANDONED IN PLACE. PRIOR TO ABANDONMENT, ALL ACTIVE SERVICE CONNECTIONS SHALL BE PERMANENTLY REROUTED AS SHOWN ON THE UTILITY PLANS OR AS DIRECTED BY THE ENGINEER. SEWER MAIN SHALL BE THOROUGHLY CLEANED, FLUSHED, AND SLURRY FILLED.
38	(E) STORM DRAIN TO BE ABANDONED IN PLACE.
39	SLURRY FILL (E) SANITARY SEWER SEPTIC TANK AND SEEPAGE PITS. ABANDON (E) SEWER LATERALS, SEPTIC TANK AND SEEPAGE PITS IN PLACE PER SEPARATE WASTEWATER PLAN.
40	SLURRY FILL (E) SEEPAGE PITS AND ABANDON IN PLACE PER SEPARATE WASTEWATER PLAN.

PROTECTION KEYNOTES

KEY NOTE	DESCRIPTION
50	PROTECT (E) BUILDING, FOUNDATION AND OTHER STRUCTURAL FEATURES AND BUILDING UTILITIES.
51	PROTECT (E) CANOPY AND COLUMNS, AND OTHER STRUCTURAL FEATURES AND CANOPY UTILITIES.
52	PROTECT (E) CONCRETE PAVEMENT/SIDEWALK.
53	PROTECT (E) AC PAVEMENT.
54	PROTECT (E) STORM DRAIN FACILITIES.
55	PROTECT (E) SANITARY SEWER FACILITIES.
56	PROTECT (E) WATER SERVICE FACILITIES.
57	PROTECT (E) STORAGE CONTAINER.
58	PROTECT (E) CURB.
59	PROTECT (E) CURB AND GUTTER.
60	PROTECT (E) RETAINING WALL.
61	PROTECT (E) FIRE WATER SERVICE FACILITIES.
62	PROTECT (E) FENCE.
63	PROTECT (E) ELECTRICAL OR COMMUNICATION FACILITIES.
64	PROTECT (E) GAS FACILITIES.
65	PROTECT (E) IRRIGATION FACILITIES.
66	PROTECT AND RELOCATE (E) GYM EQUIPMENT.
67	RELOCATE (E) BENCHES.
68	PROTECT (E) STAIRS AND FOUNDATIONS.
69	ABANDON (E) UTILITY AND ITS APPURTENANCES IN PLACE.

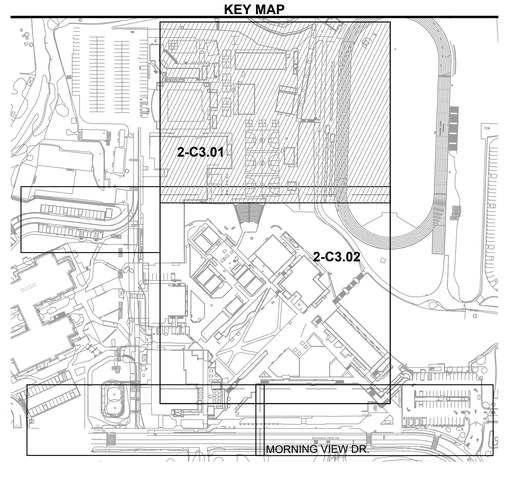
STORM DRAIN CONSTRUCTION NOTES



KEY NOTE	DESCRIPTION
RD	ROOF DRAIN POINT OF CONNECTION. SUPPLY AND INSTALL ROOF DRAIN LATERAL STUBBED 5 FT. FROM FACE OF BUILDING, S=0.020 MIN. PLUG AND MARK END. COORDINATE EXACT LOCATION WITH PLUMBING PLANS.
20	SUPPLY AND INSTALL 4" RISER WITH NDS 12"X12" LOW PROFILE HOUSING ADAPTER AND A 12"X12" ATRIUM GRATE (BLACK) OR EQUIVALENT PER DETAIL 02 SHEET 2-C7.02.
23	SUPPLY AND INSTALL 18"X18" CONCRETE DRAIN INLET PER DETAIL 01 SHEET 2-C7.02.
24	SUPPLY AND INSTALL STORM DRAIN CLEAN OUT PER DETAIL 07 SHEET 2-C7.02.
25	SUPPLY AND INSTALL PRECAST CONCRETE STORM DRAIN MANHOLE PER DETAIL 17 2-C7.02.
26	SUPPLY AND INSTALL PVC STORM DRAIN FOR PIPES OF DIAMETER SMALLER THAN 12" AND HDPE STORM DRAIN FOR PIPES OF DIAMETER 12" OR LARGER, SIZE PER PLAN. TRENCH DETAIL PER DETAIL 03 SHEET 2-C7.02.
28	SUPPLY AND INSTALL 4" WIDE TRENCH DRAIN PER DETAIL 16 SHEET 2-C7.02.
30	CONNECT TO EXISTING STORM DRAIN CONTRACTOR TO VERIFY ELEVATION OF EXISTING PIPE AND NOTIFY ENGINEER OF DISCREPANCIES PRIOR TO CONSTRUCTION.
37	SUPPLY AND INSTALL CONTECH MODULAR WETLANDS UNIT (MWS-L-8-16-V). SEE DETAIL 13 SHEET 2-C7.01.
38	SUPPLY AND INSTALL CONTECH MODULAR WETLANDS UNIT (MWS-L-8-20-V). SEE DETAIL 13 SHEET 2-C7.01.
41	INSTALL SYNTHETIC TURF SUBDRAIN PER DETAIL 14 SHEET 2-C7.02.
42	SUPPLY AND INSTALL NDS 12"X12" LOW PROFILE HOUSING ADAPTER AND A 12"X12" SQUARE CATCH BASIN GRATE (BLACK) PER OR EQUIVALENT IN WALK OFF MAT PIT. SEE DETAIL 13 SHEET L5.01.
43	PROVIDE STORM DRAIN STUB-OUT CAP END OF STUB WITH WATERTIGHT CAP. CLEARLY MARK FOR FUTURE USE.
45	INSTALL DROP-IN STORM DRAIN MANHOLE PER DETAIL __ SHEET __.
46	INSTALL SYNTHETIC TURF DRAIN PER DETAIL 15 SHEET 2-C7.02.

CONSTRUCTION NOTES:

1. UTILITIES TO CROSS OVER OR UNDER OTHER UTILITIES TO MAINTAIN 12" MINIMUM CLEARANCE AT UTILITY CROSSINGS, UNLESS NOTED OTHERWISE.
2. CONTRACTOR SHALL VERIFY SIZE AND LOCATION (HORIZONTAL AND VERTICAL) OF EXISTING CROSSING AND JOINING UTILITIES PRIOR TO CONSTRUCTION AND IMMEDIATELY NOTIFY THE ENGINEER OF ANY CONFLICT.
3. CONTRACTOR SHALL CONSTRUCT GRAVITY UTILITIES (SEWER AND STORM DRAIN) BEFORE OTHER UTILITIES. CONSTRUCTION OF THESE GRAVITY UTILITIES TO START FROM THE DOWNSTREAM ENDS.
4. EXISTING UTILITIES ARE COMPILED BASED ON PREVIOUS BASE FILES, FIELD SURVEY AND FIELD VERIFICATION. POTHOLING IS RECOMMENDED TO VERIFY ANY AND ALL UTILITIES KNOWN OR UNKNOWN WHICH MAY BE IN CONFLICT WITH PROPOSED CONSTRUCTION.
5. PRIOR TO THE REMOVAL OF ANY WET OR DRY UTILITY LINES, THE CONTRACTOR SHALL CONFIRM WITH OWNER REPRESENTATIVE WHETHER THESE UTILITY LINES ARE STILL ACTIVE OR NOT. IMMEDIATELY NOTIFY THE ENGINEER OF ANY CONFLICT.
6. CONTRACTOR TO ADJUST TO FINISHED GRADE ALL EXISTING UTILITY BOXES, STORM DRAIN CLEANOUT COVERS, PULL BOXES AND VALVE COVERS NOT SPECIFICALLY SHOWN WITHIN THE LIMITS OF WORK.
7. SEE DETAIL 03 SHEET 2-C7.02 FOR STORM DRAIN UTILITY TRENCHING AND BACKFILL.
8. SAWCUT, REMOVE AND REPLACE EXISTING CURB AS REQUIRED FOR TRENCHING. MATCH EXISTING CURB.
9. ALL PRECAST DRAIN INLETS TO HAVE AN APPROVED "NO DUMPING DRAINS TO OCEAN" 3" X 5¾" ROUNDED CORNERED RECTANGLES STYLE #NDO OR 4" DIAMETER ROUND STYLE #SDO ABRASION AND UV RESISTANT DURACAST STYLE MARKER BY DAS MANUFACTURING OR EQUIVALENT APPLIED TO THE CONCRETE COLLAR AROUND DRAIN INLET USING RAPID SET URETHANE ADHESIVE OR QUICKSTIK EPOXY PUTTY ADHESIVE PER MANUFACTURER'S RECOMMENDATIONS AND SPECIFICATIONS.

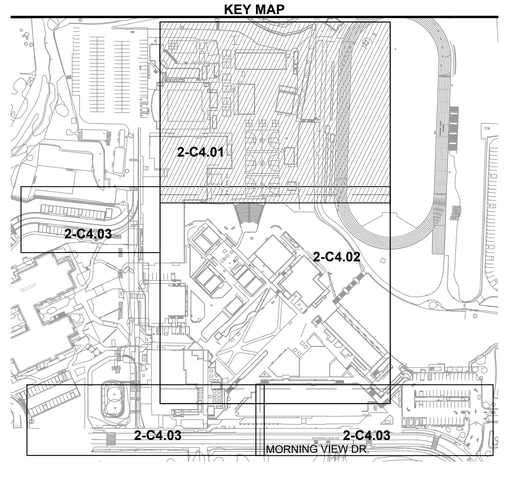
SEWER CONSTRUCTION NOTES:

KEY NOTE	DESCRIPTION
◯	SEWER SERVICE POINT OF CONNECTION. SUPPLY AND INSTALL SEWER SERVICE LATERAL STUBBED 5 FT. FROM FACE OF BUILDING, S=0.020 MIN. PLUG AND MARK END. COORDINATE EXACT LOCATION WITH PLUMBING PLANS.
40	SUPPLY AND INSTALL SEWER CLEANOUT PER DETAIL 07 SHEET 2-C7.02.
41	SUPPLY AND INSTALL PVC SDR 35 (ASTM D 3034) SIZE AS SHOWN.
42	ASSUMED LOCATION AND INVERT OF EXISTING SEWER LINE. VERIFY PRIOR TO CONSTRUCTION AND NOTIFY ENGINEER OF ANY DISCREPANCIES.
43	SUPPLY AND INSTALL SEWER MANHOLE PER SPPWC 200-4, SHEET 2-C7.03.
44	HYDROMECHANICAL GREASE INTERCEPTOR PER PLUMBING PLANS.
45	SUPPLY AND INSTALL SEWER FORCE MAIN SIZE PER SEPARATE WASTEWATER PLANS.
46	SEWER EQUALIZATION TANK AND LIFT STATION BY OTHERS.
47	SUPPLY AND INSTALL SLOPE ANCHORS PER SPPWC 221-2, SHEET 2-C7.03.
48	SUPPLY AND INSTALL TEMPORARY CAP FOR FUTURE CONNECTION.

WATER CONSTRUCTION NOTES:

W	DOMESTIC WATER SERVICE POINT OF CONNECTION. SUPPLY AND INSTALL WATER SERVICE LATERAL STUBBED 5 FT. FROM FACE OF BUILDING. SIZE AS SHOWN. PLUG AND MARK END. COORDINATE EXACT LOCATION WITH PLUMBING PLANS.
50	SUPPLY AND INSTALL THRUST BLOCK PER DETAIL 11 SHEET C7.02. TYPICAL FOR ALL BENDS, TEES AND CROSSES ON PIPE SIZES GREATER THAN 3".
51	SUPPLY AND INSTALL PVC C900 DR-14 WITH 30" MIN COVER AND 36" MIN COVER WHERE SURFACE LOADS ARE EXPECTED.
52	SUPPLY AND INSTALL GATE VALVE PER DETAIL 05 SHEET C7.02.
53	CONNECT TO EXISTING DOMESTIC WATER SERVICE LINE. CONTRACTOR TO VERIFY SIZE AND LOCATION OF EXISTING WATER LINE AND NOTIFY ENGINEER OF ANY DISCREPANCIES PRIOR TO CONSTRUCTION.
54	SUPPLY AND INSTALL PVC SCH 80 WITH 30" MIN COVER AND 36" MIN COVER WHERE SURFACE LOADS ARE EXPECTED.
55	SUPPLY AND INSTALL 2" WATTS RPZA SERIES 009 DOMESTIC WATER SERVICE BACKFLOW ASSEMBLY WITH LOCKABLE, ROUNDED CORNER BACKFLOW PREVENTER ENCLOSURE WITH CONCRETE PAD PER BACKFLOW PREVENTER ENCLOSURE MANUFACTURER'S RECOMMENDATIONS.

FIRE WATER CONSTRUCTION NOTES:



F	FIRE WATER SERVICE POINT OF CONNECTION. SUPPLY AND INSTALL WATER SERVICE LATERAL STUBBED 5 FT. FROM FACE OF BUILDING. SIZE AS SHOWN. PLUG AND MARK END. COORDINATE EXACT LOCATION WITH PLUMBING PLANS.
60	SUPPLY AND INSTALL THRUST BLOCK PER DETAIL 11 SHEET C7.02. TYPICAL FOR ALL BENDS, TEES AND CROSSES ON PIPE SIZES GREATER THAN 3".
61	SUPPLY AND INSTALL PVC C900 DR-14 WITH 30" MIN COVER AND 36" MIN COVER WHERE SURFACE LOADS ARE EXPECTED.
64	SUPPLY AND INSTALL FIRE HYDRANT PER DETAIL 10 SHEET 2-C7.02.
65	SUPPLY AND INSTALL BUILDING SERVICE POST INDICATOR VALVE/ CHECK VALVE/ FIRE DEPARTMENT CONNECTION PER DETAIL 06/ 12/ 16 SHEET2-C7.02.
66	CONNECT TO EXISTING 8" WATER LINE . CONTRACTOR TO VERIFY SIZE AND LOCATION OF EXISTING WATER LINE AND NOTIFY ENGINEER OF ANY DISCREPANCIES PRIOR TO CONSTRUCTION.
67	SUPPLY AND INSTALL GATE VALVE PER DETAIL 05 SHEET 2-C7.02.

CONSTRUCTION NOTES:

1. UTILITIES TO CROSS OVER OR UNDER OTHER UTILITIES TO MAINTAIN 12" MINIMUM CLEARANCE AT UTILITY CROSSINGS, UNLESS NOTED OTHERWISE. SANITARY SEWER TO CROSS UNDER POTABLE WATER.
2. CONTRACTOR SHALL VERIFY SIZE AND LOCATION (HORIZONTAL AND VERTICAL) OF EXISTING CROSSING AND JOINING UTILITIES PRIOR TO CONSTRUCTION AND IMMEDIATELY NOTIFY THE ENGINEER OF ANY CONFLICT.
3. CONTRACTOR SHALL CONSTRUCT GRAVITY UTILITIES (SEWER AND STORM DRAIN) BEFORE OTHER UTILITIES. CONSTRUCTION OF THESE GRAVITY UTILITIES TO START FROM THE DOWNSTREAM ENDS.
4. EXISTING UTILITIES ARE COMPILED BASED ON PREVIOUS BASE FILES, FIELD SURVEY AND FIELD VERIFICATION. POTHOLING IS RECOMMENDED TO VERIFY ANY AND ALL UTILITIES KNOWN OR UNKNOWN WHICH MAY BE IN CONFLICT WITH PROPOSED CONSTRUCTION.
5. PRIOR TO THE REMOVAL OF ANY WET OR DRY UTILITY LINES, THE CONTRACTOR SHALL CONFIRM WITH OWNER REPRESENTATIVE WHETHER THESE UTILITY LINES ARE STILL ACTIVE OR NOT. IMMEDIATELY NOTIFY THE ENGINEER OF ANY CONFLICT.
6. CONTRACTOR TO ADJUST TO FINISH GRADE ALL EXISTING UTILITY BOXES, SEWER CLEANOUT COVERS, PULL BOXES AND VALVE COVERS NOT SPECIFICALLY SHOWN WITHIN THE LIMITS OF WORK.
7. SEE DETAIL 04 SHEET 2-C7.02 FOR SEWER UTILITY TRENCHING AND BACKFILL.
8. SEE DETAIL 08 SHEET 2-C7.02 FOR WATER UTILITY TRENCHING AND BACKFILL.
9. SAWCUT, REMOVE AND REPLACE EXISTING CURB AS REQUIRED FOR TRENCHING. MATCH EXISTING CURB.

NOTE: PROPOSED FIRE WATER CONNECTIONS REQUIRE A FIRE DEPARTMENT CONNECTION (FDC) AND A POST INDICATOR VALVE (PIV).

34	PEDESTRIAN CONCRETE PAVEMENT 5.5" PCC OVER 4" CL II AB PER GEOTECHNICAL ENGINEER'S RECOMMENDATION. SEE DETAIL 01 SHEET 2C-7.01.
35	VEHICULAR CONCRETE PAVEMENT 6.5" PCC OVER 12" CL II AB PER GEOTECHNICAL ENGINEER'S RECOMMENDATION. SEE DETAIL 01 SHEET 2C-7.01.
36	GRIND AND OVERLAY EXISTING ASPHALT CONCRETE 1.5" MIN
FA	FIRE ACCESS. PAINT CURB RED PER DETAIL __, SHEET C._..
	REMOVE EXISTING PAVEMENT MARKING.

HORIZONTAL CONTROL NOTES:

THIS HORIZONTAL CONTROL PLAN ESTABLISHES THE FOLLOWING TO BE USED AS BASE CONTROL FOR CONSTRUCTION STAKING.

1. PRIOR TO STAKING ANY BUILDING STRUCTURE, SURVEYOR SHALL VERIFY THAT THE GRIDS SHOWN ON THIS PLAN MATCHES THE ARCHITECTURAL & STRUCTURAL PLANS.
2. TWO COORDINATES ARE PROVIDED TO ESTABLISH THE BUILDING GRID. SEE ARCHITECTURAL AND STRUCTURAL PLANS FOR FINAL BUILDING DIMENSIONS.
3. IF ANY DISCREPANCIES ARE FOUND DURING CONSTRUCTION STAKING NOTIFY CIVIL ENGINEER IMMEDIATELY.
4. SEE LANDSCAPE PLANS FOR DETAILED HARDSCAPE DIMENSIONS.
5. SEE LANDSCAPE PLANS FOR LOCATION AND TYPE OF CONCRETE WALKS AND HARDSCAPE INCLUDING DETAILS FOR CONCRETE FINISHES, CONTROL JOINTS AND EXPANSION JOINTS.
6. SEE PAVING AND STRIPING PLANS FOR LOCATION AND TYPE OF PAVING AND STRIPING.

///////	REMOVE EXISTING PAVEMENT MARKING.

HORIZONTAL CONTROL NOTES:

THIS HORIZONTAL CONTROL PLAN ESTABLISHES THE FOLLOWING TO BE USED AS BASE CONTROL FOR CONSTRUCTION STAKING.

1. PRIOR TO STAKING ANY BUILDING STRUCTURE, SURVEYOR SHALL VERIFY THAT THE GRIDS SHOWN ON THIS PLAN MATCHES THE ARCHITECTURAL & STRUCTURAL PLANS.
2. TWO COORDINATES ARE PROVIDED TO ESTABLISH THE BUILDING GRID. SEE ARCHITECTURAL AND STRUCTURAL PLANS FOR FINAL BUILDING DIMENSIONS.
3. IF ANY DISCREPANCIES ARE FOUND DURING CONSTRUCTION STAKING NOTIFY CIVIL ENGINEER IMMEDIATELY.
4. SEE LANDSCAPE PLANS FOR DETAILED HARDSCAPE DIMENSIONS.
5. SEE LANDSCAPE PLANS FOR LOCATION AND TYPE OF CONCRETE WALKS AND HARDSCAPE INCLUDING DETAILS FOR CONCRETE FINISHES, CONTROL JOINTS AND EXPANSION JOINTS.
6. SEE PAVING AND STRIPING PLANS FOR LOCATION AND TYPE OF PAVING AND STRIPING.

Approval _____ Representative _____

Series 009

Reduced Pressure Zone Assemblies

¼" – 2"

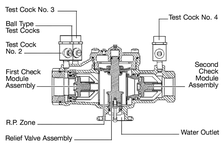
⚠ WARNING

It is illegal to use this product in any plumbing system providing water for human consumption, such as drinking or dishwashing, in the United States. Before installing standard material product, consult your local water authority, building and plumbing codes.

Series 009 Reduced Pressure Zone assemblies are designed to protect potable water supplies in accordance with national plumbing codes and water authority requirements. Specifically, the series protects drinking water supplies from dangerous cross-connections in accordance with national plumbing codes and water authority requirements for non-potable service applications such as irrigation, fireline, or industrial processing.

The series features two in-line, independent check valves, captured springs, and replaceable check seats with an intermediate relief valve. Its compact modular design facilitates maintenance and assembly access. Sizes 1/4" to 1" shutoffs have tee handles.

Series 009 assemblies of sizes ½" to 2" include a flood sensor to detect excessive water discharges from the relief valve. The sensor is installed on the assembly exterior and does not alter assembly functions or certifications. The sensor relays a signal that triggers notification to facility who can take corrective action, thus avoiding the possibility of ruinous flooding and costly damage.



NOTICE

An add-on connection kit is required to activate the flood sensor. Without the connection kit, the sensor is a passive component that has no communication with any other device. (For more information, download RP/IS-009.)

Features

- Single access cover and modular check construction for ease of maintenance
- Top entry to all internals for immediate accessibility
- Captured springs for safe maintenance
- Internal relief valve for reduced installation clearances
- Replaceable seats for economical repair
- Bronze body construction for durability (1/4" – 2")
- Ball valve test cocks — screwdriver slotted (1/4" – 2")
- Large body passages provides low pressure drop
- Compact, space saving design
- No special tools required for servicing
- Sensor on the relief valve for flood detection (1/2" – 2")

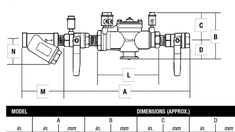
NOTICE

Use of the flood sensor does not replace the need to comply with all required instructions, codes, and regulations related to installation, operation, and maintenance of this product, including the need to provide proper drainage in the event of a discharge.

Watts® is not responsible for the failure of alerts due to connectivity or power issues.

NOTICE

The information contained herein is not intended to replace the full product installation and safety information available or the experience of a trained product installer. You are required to thoroughly read all installation instructions and product safety information before beginning the installation of this product.



Inquire with governing authorities for local installation requirements.

Watts product specifications in U.S. customary units and metric are approximate and are provided for reference only. For precise measurements, please contact Watts Technical Service. Watts reserves the right to change or modify product design, construction, specifications, or materials without prior notice and without incurring any obligation to make such changes and modifications on Watts products previously or subsequently sold.

Specification

A Reduced Pressure Zone assembly shall be installed at each potential health hazard location to prevent backflow due to backsiphonage and/or backpressure. The assembly shall consist of an internal pressure differential relief valve located in a zone between two positive seating check modules with captured springs and silicone seat discs. Seats and seat discs shall be replaceable in both check modules and the relief valve. There shall be no threads or screws in the waterway exposed to line fluids. Service of all internal components shall be through a single access bronze cover secured with stainless steel bolts. The assembly shall also include two resilient seated isolation valves, four resilient seated test cocks, and an air gap drain fitting. The assembly shall meet the requirements of USC; ASSE Std. 1013; AWWA Std. C511-92; CSA B64.4. Shall be a Watts® Series 009, and shall include a sensor on the relief valve for flood detection.

Model/Option

Prefix:

U – Union connections (For more information download ES-U009 at watts.com.)

Suffix:

AQT – Elbow fittings for 360° rotation (3/4" – 2")
FS – Flood detection sensor (½" – 2")
HC – 2½" Inlet/outlet fire hydrant fitting (2")
LF – Without shutoff valves
PC – Internal polymer coating
QT – Quarter-turn ball valves
S – Bronze strainer
SH – Stainless steel ball valve handles

Materials

Bronze body construction, silicone rubber disc material in the first and second check plus the relief valve. Replaceable polymer check seats for first and second checks. Removable relief valve seats. Stainless steel cover bolts.

Standardly furnished with NPT body connections. For optional bronze union inlet and outlet connections, specify prefix U (½" – 2"). Series 009QT furnished with quarter turn, full port, resilient seated, bronze ball valve shutoffs.

Pressure / Temperature

Suitable for supply pressure up to 175 psi (12.1 bar)
Water temperature: 33°F – 180°F (0.5°C – 75°C)

Standards

USC
ASSE No. 1013
AWWA C511-92
CSA B64.4
IAPMO File No. 1563

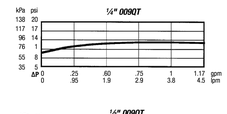
Approvals

USC-FCCCHR

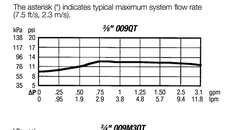
ASSE, AWWA, CSA, IAPMO

Approved by the Foundation for Cross-Connection Control and Hydraulic Research at the University of Southern California

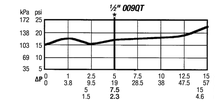
UL Classified ¾" – 2"
(LF models only except 009M3LF)



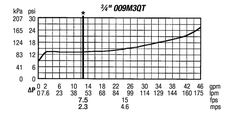
Insulated Enclosure



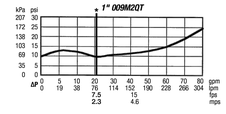
The WattsBox insulated enclosure is available for Series 009. For more information download ES-WB at watts.com.



Capacity



Performance as established by an independent testing laboratory.



The asterisk (*) indicates typical maximum system flow rate (7.5 ft/s, 2.3 m/s).

CONSTRUCTION DETAILS

2-C7.02

NOTES:

1. EXCEPT AS NOTED HEREON, THE PRECAST UNITS SHALL BE MANUFACTURED AND TESTED IN ACCORDANCE WITH ASTM C478 (C478M). AS AN ALTERNATE CURING METHOD, THE UNITS MAY BE CURED USING SATURATED STEAM FOR A MINIMUM OF 12 HOURS FOLLOWED BY 6 DAYS OF WATER CURING OR MEMBRANE CURING. IF THE UNITS ARE CURED BY THE ALTERNATE METHOD, THEY SHALL NOT BE SHIPPED PRIOR TO 8 DAYS AFTER CASTING NOR UNTIL THE CONCRETE HAS ATTAINED A STRENGTH OF 3500 PSI (25 MPa)
2. MANHOLE STEPS SHALL CONFORM TO SPPWC 635 TYPE 1 OR 3 OR SPPWC 636. THE MANHOLE STEPS SHALL BE UNIFORMLY SPACED AT A MAXIMUM OF 16" (400 mm). THE LOWEST STEP SHALL BE PLACED NOT LESS THAN 8" (200 mm) NOR MORE THAN 18" (450 mm) ABOVE THE SHELF. THE STEPS SHALL PROJECT 5" (125 mm) INSIDE THE MANHOLE.
3. RISER SECTIONS MAY BE REINFORCED OR UNREINFORCED. REINFORCED SECTIONS SHALL BE REINFORCED IN ACCORDANCE WITH ASTM C478 (C478M) AND SHALL HAVE A MINIMUM WALL THICKNESS OF 5" (125 mm). UNREINFORCED RISER SECTIONS SHALL HAVE A MINIMUM WALL THICKNESS OF 6" (150 mm).
4. THE 24" x 48" (600 mm x 1200 mm) ECCENTRIC CONES MAY BE REINFORCED OR UNREINFORCED. IF REINFORCED, THE WALL THICKNESS SHALL BE NOT LESS THAN 5" (125 mm). IF UNREINFORCED, THE WALL THICKNESS SHALL NOT BE LESS THAN 6" (150 mm).
5. JOINTS SHALL BE TONGUE AND GROOVE. JOINTS FOR REINFORCED STRUCTURES SHALL CONFORM WITH ASTM C478 (C478M) SECTION 14.
6. PRECAST UNITS SHALL BE ASSEMBLED USING CLASS "B" MORTAR.
7. IF 30" (762 mm) DIAMETER MANHOLE FRAME AND COVER IS REQUIRED, IT SHALL BE INSTALLED WHERE THE REDUCER RING IS SHOWN IN THE SECTION.
8. FOR REINFORCED PRECAST STRUCTURES, ALL REINFORCEMENT SHALL HAVE A MINIMUM OF 2" (50 mm) OF COVER OVER THE STEEL ON THE INSIDE FACE.
9. THE TOP OPENING OF THE MANHOLE AND THE STEPS SHALL BE PLACED DIRECTLY OVER THE OUTLET OF THE STRUCTURE EXCEPT AS OTHERWISE NOTED ON PLANS.
10. CONCRETE BASE AND STUB WALLS SHALL BE POURED IN ONE OPERATION TO A POINT 2" (50 mm) ABOVE THE INLET AND OUTLET PIPES. ALL PIPES SHALL BE RIGIDLY SUPPORTED BY TEMPORARY PIERS OR OTHER METHODS DURING THE OPERATION. CONCRETE SHALL SET FOR 24 HOURS BEFORE PLACING PRECAST UNITS.

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION		
PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1964 REV. 1993, 1995, 2009, 2021	**PRECAST CONCRETE SEWER MANHOLE** USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION	STANDARD PLAN **200–4** SHEET 1 OF 2

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION	
PRECAST CONCRETE SEWER MANHOLE	STANDARD PLAN **200–4** SHEET 2 OF 2

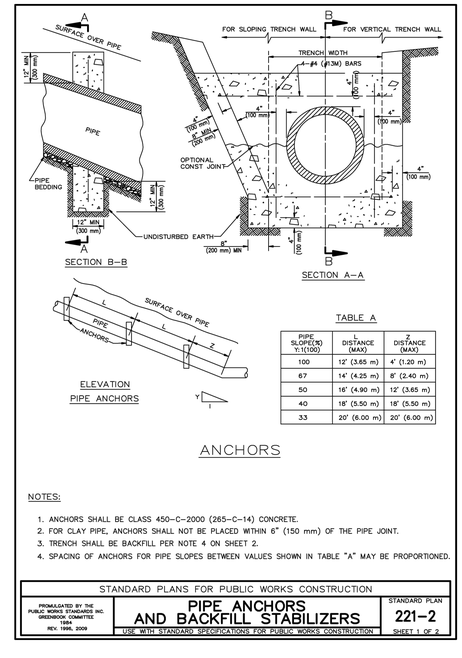

TABLE A

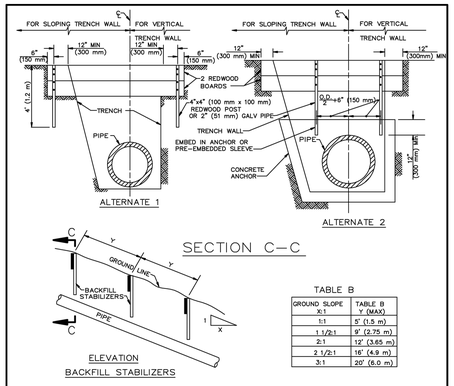

PIPE SLOPE(%) Y:1(100)	L DISTANCE (MAX)	Z DISTANCE (MAX)
100	12' (3.65 m)	4' (1.20 m)
67	14' (4.25 m)	8' (2.40 m)
50	16' (4.90 m)	12' (3.65 m)
40	18' (5.50 m)	18' (5.50 m)
33	20' (6.00 m)	20' (6.00 m)

ANCHORS

NOTES:

1. ANCHORS SHALL BE CLASS 450–C–2000 (265–C–14) CONCRETE.
2. FOR CLAY PIPE, ANCHORS SHALL NOT BE PLACED WITHIN 6" (150 mm) OF THE PIPE JOINT.
3. TRENCH SHALL BE BACKFILL PER NOTE 4 ON SHEET 2.
4. SPACING OF ANCHORS FOR PIPE SLOPES BETWEEN VALUES SHOWN IN TABLE "A" MAY BE PROPORTIONED.

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION		
PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1964 REV. 1996, 2009	**PIPE ANCHORS AND BACKFILL STABILIZERS** USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION	STANDARD PLAN **221–2** SHEET 1 OF 2

SECTION C–C

TABLE B

GROUND SLOPE X:1	TABLE B Y (MAX)
1:1	5' (1.5 m)
1 1/2:1	9' (2.75 m)
2:1	12' (3.65 m)
2 1/2:1	16' (4.9 m)
3:1	20' (6.0 m)

STABILIZERS

NOTES:

1. REDWOOD BOARDS SHALL BE 2" x 12" (50 x 300 mm) WHERE DEPTH OF COVER OVER PIPE PERMITS, OTHERWISE USE 2" x 10" (50 x 250 mm).
2. REDWOOD BOARDS SHALL BE PLACED ON THE HIGH GROUND SIDE OF THE POSTS.
3. EACH REDWOOD BOARD SHALL BE FASTENED BY USING 2–16d NAILS TO EACH REDWOOD POST OR A 3/8" (10 mm) BOLT AND NUT WITH WASHERS TO EACH GALVANIZED PIPE. ALL HARDWARE SHALL BE GALVANIZED.
4. TRENCH BACKFILL SHALL BE CONSOLIDATED BY MECHANICAL COMPACTION. IN LIEU OF MECHANICALLY COMPACTION, SOIL CEMENT MAY BE USED; HOWEVER, THE TOP 12" (300 mm) OF BACKFILL SHALL BE NATIVE SOIL, MECHANICALLY COMPACTED.
5. SPACING OF STABILIZERS FOR GROUND SLOPES BETWEEN VALUES SHOWN IN TABLE "B" MAY BE PROPORTIONED.
6. THE CONTRACTOR MAY, AT ITS OPTION, SUBSTITUTE DOUGLAS FIR FOR THE REDWOOD PROVIDED IT HAS BEEN TREATED WITH PRESERVATIVES.

OVERALL SITE PLAN

PW–OVERALL SITE PLAN EXISTING AND PROPOSED

SCALE: 1"=0060'

PW-02

GENERAL NOTES:

1. EXISTING OWTS COMPONENTS LOCATION AND ABANDONMENT:
   - 1.1. CONTRACTOR IS RESPONSIBLE FOR LOCATING ALL EXISTING ONSITE WASTEWATER TREATMENT SYSTEM (OWTS) COMPONENTS. THE LOCATIONS ON THE ENGINEERING PLANS ARE INFORMATIONAL AND MAY NOT INCLUDE ALL COMPONENTS OF THE OWTS. MANY ITEMS, SUCH AS TANKS, PIPING, DISTRIBUTION DEVICES, SEEPAGE PITS, DISPERSAL FIELDS, AND OTHER APPURTENANCES ARE BURIED AND NOT LOCATABLE BY THE SURVEYOR OR UTILITIES LOCATOR .
   - 1.2. PRIOR TO COMMENCING WORK TO ABANDON, REMOVE, OR REPLACE EXISTING ONSITE WASTEWATER TREATMENT SYSTEM (OWTS) COMPONENTS AN "OWTS ABANDONMENT PERMIT" SHALL BE OBTAINED FROM THE CITY OF MALIBU. ALL WORK PERFORMED IN THE OWTS ABANDONMENT, REMOVAL, OR REPLACEMENT AREA SHALL BE PERFORMED IN STRICT ACCORDANCE WITH ALL APPLICABLE FEDERAL, STATE, AND LOCAL ENVIRONMENTAL AND OCCUPATIONAL SAFETY AND HEALTH REGULATORY REQUIREMENTS. THE OBTAINMENT OF ANY SUCH REQUIRED PERMITS OR APPROVALS FOR THIS SCOPE OF WORK SHALL BE THE RESPONSIBILITY OF THE APPLICANT AND THEIR AGENTS.
   - 1.3. THE EXISTING OWTS COMPONENTS INCLUDING; SEPTIC TANK(S), PIPING, CLEANOUT(S) SEEPAGE PIT(S), DISPERSAL FIELD(S), AND ALL OTHER APPURTENANCES SHALL BE PROPERLY ABANDONED PURSUANT TO CITY OF MALIBU ORDINANCE 435, SECTION 15.40.170 C, AND SECTION 15.40.170 D, TITLE 28 OF THE LOS ANGELES COUNTY CODE, INCORPORATING THE MOST CURRENT CALIFORNIA PLUMBING CODE, LOCAL PLUMBING CODE, AND POLICIES. METHOD OF ABANDONMENT SHALL BE DETERMINED BY THE ENGINEER AND/OR THE OWNER'S REPRESENTATIVE
2. SEWER PIPE SHALL BE BEDDED IN ACCORDANCE WITH SPECIFICATIONS AND TITLE 28 OF THE LOS ANGELES COUNTY CODE, INCORPORATING THE MOST CURRENT CALIFORNIA PLUMBING CODE, LOCAL PLUMBING CODE, AND ORDINANCES.
3. SYSTEM COMPONENTS AND APPURTENANCES (INCLUDING CLEAN-OUTS, VENTS, BACKWATER VALVES, ETC.) SHALL BE INSTALLED IN ACCORDANCE WITH TITLE 28 OF THE LOS ANGELES COUNTY CODE, INCORPORATING THE MOST CURRENT CALIFORNIA PLUMBING CODE, LOCAL PLUMBING CODE, AND POLICIES.
4. ELECTRICAL COMPONENTS AND APPURTENANCES SHALL BE INSTALLED IN ACCORDANCE WITH TITLE 27 OF THE LOS ANGELES COUNTY CODE, INCORPORATING THE MOST CURRENT CALIFORNIA ELECTRICAL CODE, LOCAL ELECTRICAL CODE, AND ORDINANCES.
5. A REGISTERED GEOTECHNICAL ENGINEER, UNDER THE DIRECTION OF THE OWNER, SHALL DETERMINE IF THE WASTEWATER LOADING RATE WILL CAUSE THE EXISTING SLOPE TO BECOME UNSTABLE. ENSITU ENGINEERING INC., IS NOT A GEOTECHNICAL ENGINEERING FIRM, THEREFORE, WE CAN NOT PREDICT AND/OR DETERMINE THE STABILITY OF THE EXISTING SLOPE.
6. THE PROJECT ENGINEERING GEOLOGIST SHALL OBSERVE THE INSTALLATION OF THE TANK AND DISPERSAL SYSTEM COMPONENTS OF THE AOWTS (INCLUDING BUT NOT LIMITED TO; (A) TANK EXCAVATION, BEDDING, AND BACKFILL (B) SEEPAGE PITS EXCAVATION, CONSTRUCTION, AND BACKFILL (C) SUBSURFACE DISPERSAL SYSTEM BEDDING, FILL MATERIAL, CONSTRUCTION, AND BACKFILL) AND PROVIDE THE CITY INSPECTOR WITH A FIELD MEMORANDUM(S) DOCUMENTING AND VERIFYING THAT THE TANK AND DISPERSAL SYSTEM COMPONENTS WERE INSTALLED PER APPROVED AOWTS PLANS.
7. LEACH FIELDS AND DISPERSAL SYSTEMS DESIGNATED AS SAND CATEGORY: ANY REMAINING FILL MATERIAL AND ANY BEACH SAND SEDIMENT THAT MIGHT HAVE REDUCED PERMEABILITY FROM EXISTING LEACH FIELD OPERATIONS ENCOUNTERED BELOW THE BOTTOM OF THE PROPOSED LEACH FIELD OR ANY MATERIAL ENCOUNTERED IN THE CONSTRUCTION OF THE LEACH FIELD THAT IS NOT CATEGORIZED AS BEACH SAND DEPOSITS SHALL BE EXCAVATED TO THE LEVEL OF THE NATIVE BEACH SAND DEPOSITS AND REPLACED WITH DOUBLE- WASHED SAND. THE PROJECT ENGINEERING GEOLOGIST SHALL OBSERVE THE EXCAVATION OF THE LEACH FIELD AND CONFIRM IN WRITING THAT ALL THE DELETERIOUS FILL AND NON-BEACH SAND MATERIALS BELOW THE LEACH FIELD HAVE BEEN REMOVED AND REPLACED WITH CLEAN SAND AND THE LEACH FIELD WAS CONSTRUCTED IN ACCORDANCE WITH THE APPROVED OWTS PLANS.
8. SUBSURFACE DRIP LINE SHALL BE PLACED IN UNCOMPACTED NATIVE SOILS RIPPED AND TILLED A MINIMUM OF 18 INCHES. SOIL SHALL BE AMENDED TO BE 30% SAND, 30% MULCH, 40% NATIVE OR LANDSCAPE DESIGNER SHALL BE CONTACTED TO ADVISE CONTRACTOR ON TYPE OF TOPSOIL TO IMPORT FOR MINIMUM BURIAL DEPTH. DISPERSAL FIELD SHALL BE PLANTED AND ESTABLISHED PRIOR TO OCCUPANCY (ENGINEER TO VERIFY)
9. ALL DIMENSIONS AND GRADES SHALL BE VERIFIED BY CONTRACTOR PRIOR TO SYSTEM INSTALLATION, BUILDING SEWER DEPTH OR CONNECTION POINT WAS NOT PROVIDED AND SHALL BE DETERMINED BY CONTRACTOR PRIOR TO CONSTRUCTION
10. CONTRACTOR TO VERIFY DEPTH AND LOCATION OF BUILDING SEWER CONNECTION, MINIMUM 2% SLOPE FROM STRUCTURE TO CONNECTION POINT.
11. ONSITE WASTEWATER TREATMENT SYSTEM SHALL BE VENTED IN ACCORDANCE WITH TITLE 28 OF THE LOS ANGELES COUNTY CODE, INCORPORATING THE MOST CURRENT CALIFORNIA PLUMBING CODE, LOCAL PLUMBING CODE, AND POLICIES.
12. THE OWTS IS SITED AS FAR LANDWARD AS FEASIBLE.

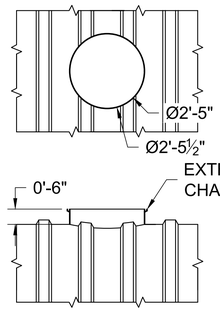
EQUALIZATION TANK SECTIONS

PW-08

MANHOLE (ACCESS) COVERS, UNDERGROUND FIBERGLASS REINFORCED PLASTIC TANKAGE, AND UNDERGROUND FIBERGLASS REINFORCED PLASTIC WET WELL EQUIPMENT SECTION AND NOTES:

1. RELATED DOCUMENTS
 1.1. DRAWINGS AND GENERAL PROVISIONS OF THE CONTRACT, INCLUDING GENERAL AND SUPPLEMENTARY CONDITIONS AND DIVISION 01 SPECIFICATION SECTIONS, APPLY TO THIS SECTION AND THE FOLLOWING NOTES.

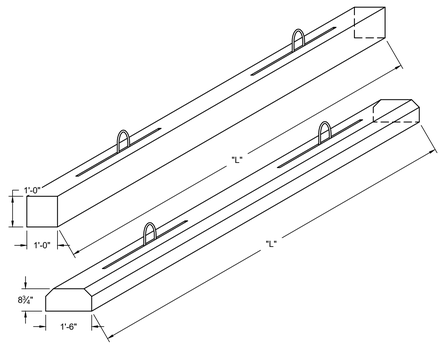
2. SUBSTITUTIONS AND "OR EQUAL" SUBMITTAL
 2.1. THE CONTRACTOR MAY SUPPLY ANY OF THE MATERIALS SPECIFIED OR OFFER AN EQUIVALENT. THE ENGINEER SHALL DETERMINE WHETHER THE MATERIAL OFFERED IS EQUIVALENT TO THAT SPECIFIED. THE CONTRACTOR SHALL MAKE ALL "OR EQUAL" SUBMITTALS WITHIN THIRTY (30) CALENDAR DAYS AFTER ISSUANCE OF NOTICE TO PROCEED. ANY REQUEST OR SUBMITTAL RECEIVED AFTER THE SPECIFIED PERIOD WILL BE CONSIDERED AS NOT EQUAL TO THAT SO SPECIFIED AND WILL BE PROCESSED AS A SUBSTITUTION DESCRIBED HEREINAFTER.
 2.2. WHENEVER ANY PARTICULAR MATERIAL, PROCESS, OR EQUIPMENT IS INDICATED BY PATENT, PROPRIETARY OR BRAND NAME, OR BY NAME OF MANUFACTURER, SUCH WORDING IS USED FOR THE PURPOSE OF FACILITATING ITS DESCRIPTION AND SHALL BE DEEMED TO BE FOLLOWED BY THE WORDS 'OR EQUAL.' A LISTING OF MATERIALS IS NOT INTENDED TO BE COMPREHENSIVE, OR IN ORDER OF PREFERENCE. THE CONTRACTOR MAY OFFER ANY MATERIAL, PROCESS, OR EQUIPMENT CONSIDERED TO BE EQUIVALENT TO THAT INDICATED. THE SUBSTANTIATION OF OFFERS SHALL BE SUBMITTED AS PROVIDED IN THE CONTRACT DOCUMENTS.
 2.3. THE CONTRACTOR SHALL, AT ITS EXPENSE, FURNISH DATA CONCERNING ITEMS OFFERED BY IT AS EQUIVALENT TO THOSE SPECIFIED. THE CONTRACTOR SHALL HAVE THE MATERIAL TESTED AS REQUIRED BY THE ENGINEER TO DETERMINE THAT THE QUALITY, STRENGTH, PHYSICAL, CHEMICAL, OR OTHER CHARACTERISTICS, INCLUDING DURABILITY, FINISH, EFFICIENCY, DIMENSIONS, SERVICE, AND SUITABILITY ARE SUCH THAT THE ITEMS WILL FULFILL ITS INTENDED FUNCTION.
 2.4. TEST METHODS SHALL BE SUBJECT TO THE APPROVAL OF THE ENGINEER. TEST RESULTS SHALL BE REPORTED PROMPTLY TO THE ENGINEER, WHO WILL EVALUATE THE RESULTS AND DETERMINE IF THE SUBSTITUTES ITEMS IS EQUIVALENT. THE ENGINEER'S FINDINGS SHALL BE FINAL. INSTALLATION AND USE OF A SUBSTITUTE ITEMS SHALL NOT BE MADE UNTIL APPROVED BY THE ENGINEER.
 2.5. ALL MANUFACTURER'S DATA SUBMITTED TO THE ENGINEER FOR REVIEW AND ACCEPTANCE SHALL CLEARLY IDENTIFY EACH PROPOSED SUBSTITUTE WITH THE CORRESPONDING CONTRACT DRAWING DETAIL AND SPECIFICATION SECTION. IF THE ENGINEER DECIDES TO ACCEPT FOR USE IN THE PROJECT A MATERIAL, PROCESS OR ARTICLE WHICH IS NOT THE EQUAL OF THAT SPECIFIED, SUBSTITUTION SHALL BE MADE IN THE MANNER DESCRIBED IN CHANGES AND EXTRA WORK OF THE GENERAL CONDITIONS, WITH A CREDIT TO THE COUNTY OR THE DIFFERENCE IN VALUE.
 2.6. THE ENGINEER SHALL DETERMINE WHETHER THE MATERIAL OFFERED IS EQUIVALENT TO THAT SPECIFIED. ANY REVISION TO STRUCTURES, PIPING, MECHANICAL, ELECTRICAL, INSTRUMENTATION, OR ANY OTHER WORK MADE NECESSARY BY SUCH SUBSTITUTION MUST BE APPROVED BY THE ENGINEER, AND THE ENTIRE COST BOTH DIRECT AND INDIRECT OF THESE REVISIONS SHALL BE BORNE BY THE CONTRACTOR.
 2.7. ANY MATERIALS, PROCESS, OR ARTICLE MAY BE REQUESTED AS A SUBSTITUTION BY THE CONTRACTOR, IN LIEU OF THAT SPECIFIED, UNDER THE FOLLOWING CONDITIONS:
  2.7.1. REQUESTS MUST BE SUBMITTED IN WRITING AND IN THE MANNER DESCRIBED IN SHOP DRAWINGS / SUBMITTALS OF THESE GENERAL REQUIREMENTS.
  2.7.2. REQUESTS MUST BE SUBMITTED THIRTY (30) CALENDAR DAYS PRIOR TO STARTING THE WORK, AS ESTABLISHED BY THE ENGINEER, SO AS NOT TO CAUSE ANY DELAY IN COMPLETION OF THE PROJECT. NO OTHER REQUEST WILL BE CONSIDERED AFTER EXPIRATION OF THE PERIOD SPECIFIED, EXCEPT THAT IN EXCEPTIONAL CASES WHERE IT IS DETERMINED TO BE IN THE BEST INTEREST OF THE COUNTY, AS APPROVED BY THE ENGINEER.
  2.7.3. THE CONTRACTOR AGREES TO PAY FOR ALL ENGINEERING AND DESIGN SERVICES, IF REQUIRED, TO MAKE ALL CHANGES AND ADJUSTMENTS IN MATERIAL AND WORK OF ALL TRADES DIRECTLY OR INDIRECTLY AFFECTED BY THE SUBSTITUTE, TO THE SATISFACTION OF THE ENGINEER, AT NO COST TO THE COUNTY.
  2.7.4. ALL REQUESTS FOR SUBSTITUTION SHALL BE MADE THROUGH THE CONTRACTOR. SUBMISSIONS BY THE MANUFACTURER SHALL BE ONLY THE CONTRACTOR'S APPROVAL OF SUCH SUBSTITUTION.
  2.7.5. NO REQUESTS FOR SUBSTITUTIONS WILL BE CONSIDERED DURING THE BIDDING PERIOD.
  2.7.6. THE CONTRACTOR SHALL FURNISH ADEQUATE DATA WITH EACH REQUEST FOR APPROVAL OF A SUBSTITUTE TO ENABLE THE ENGINEER TO EVALUATE THE PROPOSED SUBSTITUTION.
  2.7.7. IF A SUBSTITUTE OFFERED BY THE CONTRACTOR IS NOT FOUND TO BE EQUAL TO THE SPECIFIED MATERIAL, THEN CONTRACTOR SHALL FURNISH AND INSTALL THE SPECIFIED MATERIAL.
  2.7.8. THE SPECIFIED CONTRACT COMPLETION TIME SHALL NOT BE AFFECTED BY ANY CIRCUMSTANCE DEVELOPING FROM THE PROVISIONS OF THIS SECTION



3. 36" ROUND MANHOLE WITH COMPOSITE COVER, BOLT-DOWN 12" SKIRT,
 3.1. SHIRT SHALL BE 316 STAINLESS STEEL OR COATED AS FOLLOWS:
  3.1.1. SURFACE PREP:
   3.1.1.1. WHITE METAL BLAST CLEANING (SSPC-SP5/NACE1): REMOVAL OF ALL VISIBLE RUST, MILL SCALE, PAINT, AND FOREIGN MATTER BY BLAST CLEANING BY WHEEL OR NOZZLE (DRY OR WET) USING SAND, GRIT, OR SHOT.
  3.1.2. COATING
   3.1.1.1. EPOXY MORTAR: HIGH-BUILD, 3-COMPONET AMINE CURED EPOXY MORTAR, SHALL HAVE A SOLIDS CONTENT OF 100 PERCENT BY VOLUME, SUITABLE FOR LONG-TERM IMMERSION AND ATMOSPHERIC EXPOSURE TO WASTEWATER. FILLER-RESURFACER COMPOUND SHALL BE A 3-COMPONENT EPOXY CEMENTITIOUS THIN OVERLAY MATERIAL USED TO FILL VOIDS AND ROUGH AREAS AND MUST FEATHER-EDGE CAPABLE. EPOXY GLAZE (FINISH) COAT SHALL BE 100 PERCENT SOLIDS EPOXY SUITABLE FOR LONG-TERM IMMERSION AND ATMOSPHERIC EXPOSURE TO WASTEWATER.
   3.1.1.2. FILLER/RESURFACER THIN OVERLAY (THICKNESS = MINIMUM 1/16"), TNEMEC 218 MORTARCLAD, OR EQUAL.
   3.1.1.3. EPOXY MORTAR (DFT = 125 MILS) TNEMEC 434 PERMA-SHIELD, OR EQUAL.
   3.1.1.4. FINISH COAT (DFT = 15-20 MILS), TNEMEC 435 PERMA-GLAZE, OR EQUAL

4. UNDER GROUND FIBERGLASS REINFORCED PLASTIC TANKAGE
 4.1. GENERAL
  4.1.1. FIBERGLASS TANK MANUFACTURER AND FIBERGLASS TANK INSTALLER SHALL COORDINATE TO DETERMINE TANK PENETRATIONS, BRACKETS,AND OTHER APPURTENANCES PRIOR TO FINAL TANK CONSTRUCTION AND IN ACCORDANCE WITH SPECIFICATIONS.
  4.1.2. TANKS AND EQUIPMENT SHALL BE INSTALLED IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS.
  4.1.3. TANK SHALL BE SUBJECTED TO TRAFFIC LOADS (H-20 LOADS) TANK MUST HAVE A COVER DEPTH OF AT LEAST 36 INCHES OF BACKFILL (COMPACTED CLASS II BASE).
  4.1.4. THE MAXIMUM BURIAL DEPTH IS 7 FEET OF COVER OVER THE TOP OF THE TANK. DEVIATION FROM THIS MAY BE PERMISSIBLE WITH PRIOR WRITTEN AUTHORIZATION FROM XERXES.
  4.1.5. CONCRETE PAD MUST EXTEND A MINIMUM OF 24 INCHES BEYOND THE TANK IN ALL DIRECTIONS.
  4.1.6. IF THERE IS AN UNATTACHED RISER OVER AN ACCESS OPENING, IT MUST NOT TRANSMIT LOAD FROM THE ASPHALT OR CONCRETE SLAB TO THE TANK. A MINIMUM SPACE OF 6 INCHES MUST EXIST BETWEEN THE BOTTOM OF THE RISER AND THE TOP OF THE TANK.
  4.1.7. IF THERE IS AN ATTACHED RISER ON AN ACCESS OPENING, IT MUST NOT TRANSMIT LOAD FROM THE ASPHALT OR CONCRETE SLAB TO THE TANK. A MINIMUM SPACE OF 3 INCHES MUST EXIST BETWEEN THE RISER OR SUMP AND THE SLAB.
  4.1.8. TANKS SHALL BE ANCHORED AS SHOWN ON PLANS
 4.2. SCOPE OF WORK
  4.2.1. THE CONTRACTOR SHALL FURNISH ALL LABOR, MATERIALS, TOOLS, EQUIPMENT, AND PERFORM ALL WORK AND SERVICES NECESSARY FOR THE INSTALLATION OF THE FIBERGLASS TANKAGE AS SHOWN ON THE CONTRACT DRAWINGS AND AS SPECIFIED, IN ACCORDANCE WITH PROVISIONS OF THE CONTRACT DOCUMENTS, AND COMPLETELY COORDINATED WITH WORK OF ALL OTHER TRADES.
  4.2.2. ALTHOUGH SUCH WORK IS NOT SPECIFICALLY INDICATED, FURNISH AND INSTALL ALL SUPPLEMENTARY OR MISCELLANEOUS ITEMS, APPURTENANCES AND DEVICES INCIDENTAL TO OR NECESSARY FOR A SOUND, SECURE AND COMPLETE INSTALLATION.
 4.1. SUBMITTALS.
  4.1.1. MANUFACTURER'S CERTIFICATE OF PROPER INSTALLATION.
 4.2. QUALITY ASSURANCE
  4.2.1. ACCEPTABLE MANUFACTURERS: THE MANUFACTURER XERXES CORPORATION, OR EQUAL
   4.2.1.1. MANUFACTURING STANDARDS.
    4.2.1.1.1. MANUFACTURER SHALL BE ABLE TO PROVIDE DOCUMENTATION THAT THE TANK SHELL HAS BEEN BUILT TO THE APPLICABLE REQUIREMENTS OF UNDERWRITERS LABORATORIES STANDARD UL 1316.
    4.2.1.1.2. TANK MANUFACTURER SHALL BE IN THE BUSINESS OF MANUFACTURING TANKS TO UL 1316 STANDARDS.
   4.2.1.2. MATERIALS:
   4.2.1.3. TANK SHALL BE MANUFACTURED OF 100% RESIN AND GLASS-FIBER REINFORCEMENT, WITH NO SAND FILLERS AND NO EXPOSED GLASS FIBERS.
   4.2.1.4. TANK OPENINGS FOR INSPECTION AND FOR INSTALLATION OF EFFLUENT-FILTER CHAMBER SHALL BE CONSTRUCTED OF FIBERGLASS-REINFORCED PLASTIC ("FRP").
 4.3. INSTALLATION AND START-UP
  4.3.1. A REPRESENTATIVE FROM THE MANUFACTURER, SHALL BE ON-SITE TO ASSIST IN CONCRETE TANK INSTALLATION. A REPRESENTATIVE FROM ALL MANUFACTURERS SHALL PROVIDE ON-SITE INSTALLATION ASSISTANCE AND PROVIDE START-UP ASSISTANCE AND CERTIFY CORRECT OPERATION.
 4.4. SINGLE-WALL FIBERGLASS UNDERGROUND TANKS
  4.4.1. PRODUCT STORAGE:
   4.4.1.1. TANK SHALL BE VENTED TO ATMOSPHERIC PRESSURE AS THE TANK IS NOT DESIGNED AS A PRESSURE VESSEL.
  4.4.2. LOADING CONDITION: TANK SHALL MEET THE FOLLOWING DESIGN CRITERIA:
   4.4.2.1. INTERNAL LOAD: TANK SHALL BE DESIGNED TO WITHSTAND A 5-PSIG AIR-PRESSURE TEST (3 PSIG FOR A 12-FOOT TANK) WITH A 5:1 SAFETY FACTOR.
   4.4.2.2. SURFACE LOADS: TANK SHALL WITHSTAND SURFACE H-20 AXLE LOADS WHEN PROPERLY INSTALLED ACCORDING TO MANUFACTURER'S CURRENT INSTALLATION INSTRUCTIONS.
   4.4.2.3. EXTERNAL HYDROSTATIC PRESSURE AND BURIAL DEPTH: TANK SHALL BE CAPABLE OF BEING BURIED IN GROUND WITH 7 FEET OF OVERBURDEN, THE HOLE FULLY FLOODED AND A SAFETY FACTOR OF 5:1 AGAINST GENERAL BUCKLING.
   4.4.2.4. TANK SHALL SUPPORT ACCESSORY EQUIPMENT-SUCH AS INLET AND OUTLET PIPING, EFFLUENT-FILTER CHAMBER, LADDERS AND BAFFLES-AS SHOWN ON TANK DRAWINGS AND WHEN INSTALLED ACCORDING TO TANK MANUFACTURER'S RECOMMENDATIONS.
 4.5. ACCESSORIES
  4.5.1. PIPING
   4.5.1.1. SCHEDULE 40 POLYVINYL CHLORIDE ("PVC") PIPE SHALL BE USED FOR INLET AND OUTLET PIPING.
  4.5.2. OPENINGS
   4.5.2.1. ALL 22-INCH OR 30-INCH OPENINGS SHALL BE MANUFACTURED OF FRP.
   4.5.2.2. LOCATION(S) SHALL BE SHOWN ON TANK DRAWINGS.
   4.5.2.3. OPTIONAL EXTENSIONS SHALL BE FRP OR PVC.
  4.5.3. ANCHOR STRAPS
   4.5.3.1. STRAPS SHALL BE FRP ANCHOR STRAPS AS SUPPLIED BY TANK MANUFACTURER.
   4.5.3.2. NUMBER AND LOCATION OF STRAPS SHALL BE SHOWN ON TANK DRAWINGS.
 4.6. EXAMINATION
  4.6.1. VERIFY THAT BUILDING SANITARY SEWER CONNECTION, SIZE, LOCATION AND INVERT ARE AS INDICATED
 4.7. INSTALLATION
  4.7.1. TANK SHALL BE INSTALLED ACCORDING TO MANUFACTURER'S CURRENT UNDERGROUND STORAGE TANK INSTALLATION INSTRUCTIONS
 4.8. WARRANTY
  4.8.1. WARRANTY SHALL BE MANUFACTURER'S CURRENT STANDARD.
   4.8.1.1. WILL NOT FAIL FOR A PERIOD OF THIRTY (30) YEARS FROM DATE OF ORIGINAL DELIVERY BY THE MANUFACTURER DUE TO NATURAL EXTERNAL CORROSION.
   4.8.1.2. WILL NOT FAIL FOR A PERIOD OF THIRTY (30) YEARS FROM DATE OF ORIGINAL DELIVERY BY THE MANUFACTURER DUE TO INTERNAL CORROSION, PROVIDED THE TANK IS USED SOLELY, WITH OR WITHOUT TANK WATER BOTTOMS.
   4.8.1.3. WILL MEET THE MANUFACTURER' PUBLISHED SPECIFICATIONS AND WILL BE FREE FROM MATERIAL DEFECTS IN MATERIALS AND WORKMANSHIP FOR A PERIOD OF ONE (1) YEAR FOLLOWING DATE OF ORIGINAL DELIVERY BY THE MANUFACTURER.
 4.9. SUPPLIER/MANUFACTURER'S SERVICES
  4.9.1. A SUPPLIER'S AND/OR MANUFACTURER'S REPRESENTATIVE FOR THE EQUIPMENT SPECIFIED SHALL BE AT THE JOB SITE FOR INSTALLATION ASSISTANCE, INSPECTION AND CERTIFICATION OF THE INSTALLATION, TESTING, START-UP ASSISTANCE, AND TRAINING OF OWNER'S PERSONNEL.

5. UNDERGROUND FIBERGLASS REINFORCED PLASTIC WET WELL
 5.1. GENERAL
  5.1.1. FIBERGLASS TANK MANUFACTURER AND FIBERGLASS TANK INSTALLER SHALL COORDINATE TO DETERMINE TANK PENETRATIONS, BRACKETS,AND OTHER APPURTENANCES PRIOR TO FINAL TANK CONSTRUCTION AND IN ACCORDANCE WITH SPECIFICATIONS.
 5.2. SCOPE OF WORK
  5.2.1. THE PRODUCT LISTED UNDER THIS SECTION SHALL INCLUDE ALL LABOR, MATERIALS AND EQUIPMENT NECESSARY TO FURNISH A FRP WET WELL. UNLESS OTHERWISE INDICATED THE TERMINOLOGY USED IN THIS SPECIFICATION SHALL BE IN ACCORDANCE WITH THE DEFINITIONS IN THE AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM) DESIGNATION D883 - STANDARD TERMINOLOGY RELATED TO PLASTICS. WET WELLS SHALL BE ONE PIECE UNITS MANUFACTURED TO MEET OR EXCEED ALL APPLICABLE SPECIFICATIONS OF ASTM D3753
 5.3. SUBMITTALS
  5.3.1. SHOP DRAWINGS
   5.3.1.1. THE MANUFACTURER SHALL SUPPLY TO ENGINEER, CONTRACTOR, AND / OR OWNER, A COMPLETE SET OF SCALE DRAWINGS DETAILING DIMENSIONS OF HEIGHTS, DIAMETER, ELEVATIONS TO INVERT, PIPE SIZES AND ANY OTHER NECESSARY DETAILS.
  5.3.2. CALCULATIONS
   5.3.2.1. THE MANUFACTURER SHALL SUPPLY THE ENGINEER, CONTRACTOR, AND / OR OWNER BUOYANCY CALCULATIONS ASSUMING A FLOODED CONDITION AT FINISH GRADE FOR AN EMPTY WET WELL.
   5.3.2.2. STRUCTURAL DESIGN AND ANALYSIS SUBMITTALS WILL INCLUDE ANALYSIS SHOWING A MINIMUM SAFETY FACTOR OR 3:1 FOR LONGITUDINAL / AXIAL BUCKLING OF THE WET WELL SIDE WALL.
 5.4. PRODUCTS FIBERGLASS REINFORCED PLASTIC (FRP) WET WELL
  5.4.1. LOADING CONDITIONS
   5.4.1.1. THE WET WELL SHALL BE DESIGNED AND CONSTRUCTED TO WITHSTAND OR EXCEED WALL COLLAPSE AND BUCKLING WITH A 3:1 SAFETY FACTOR, BASED ON THE FIELD GEOTECHNICAL REPORT OF THE SITE SPECIFIC SOIL CONDITIONS. IF THOSE SITE SPECIFIC CONDITIONS ARE NOT AVAILABLE AT TIME OF DESIGN, LOADING CONDITIONS LISTED UNDER (1) (A.), (1)(B.), AND (1)(C.), SHALL BE ASSUMED.
    5.4.1.1.1. UNIT WEIGHT OF WATER IS 62.4 LBS. PER CUBIC FOOT.
    5.4.1.1.2. SATURATED SOIL UNIT WEIGHT OF 120 LBS. PER CUBIC FOOT.
    5.4.1.1.3. MODULUS OF SOIL REACTION OF 700 LBS. PER SQUARE FOOT.
   5.4.1.2. WET WELL BOTTOM SHALL NOT HAVE MORE THAN 1/8 INCHES OF CENTER DEFLECTION WITH VESSEL EMPTY AND WATER TABLE LOCATED ESTIMATED EQUAL TO FINISHED GRADE.
   5.4.1.3. WET WELL, WHEN INSTALLED ACCORDING TO WET WELL MANUFACTURERS CURRENT WET WELL INSTALLATION INSTRUCTIONS AND OPERATING GUIDELINES, SHALL SUPPORT ACCESSORY EQUIPMENT - SUCH AS SUBMERSIBLE PUMPS, RAILS, VALVES, AND LADDERS AS SHOWN ON DRAWINGS.
  5.4.2. PRODUCT STORAGE
   5.4.2.1. WET WELL SHALL BE VENTED TO ATMOSPHERIC PRESSURE.
   5.4.2.2. WET WELL SHALL BE CAPABLE OF STORING PRODUCTS IDENTIFIED IN THE MANUFACTURER'S LIMITED WARRANTY FOR UNDERGROUND WET WELLS IN EFFECT AT THE TIME OF PURCHASE.
  5.4.3. MATERIALS
   5.4.3.1. WET WELL SHALL BE MANUFACTURED WITH 100% PREMIUM RESIN (HIGHLY CROSS-LINKED ISOPHTHALIC POLYESTER OR TEREPHTHALIC POLYESTER RESINS ONLY), AND CHOPPED GLASS. NO FILLERS OR EXTENDERS WILL BE USED.
   5.4.3.2. THE RESIN SHALL BE SUITABLE FOR CONTINUOUS IMMERSION IN SEWAGE IN THE PH RANGE OF 3 TO 11 AND CONCENTRATIONS OF H'S FOUND IN MUNICIPAL SEWER SYSTEMS. RESINS SHALL BE SUITABLE FOR SULFURIC ACID CONCENTRATIONS TO 20% OF SOLUTION IN WASTE STREAM.
   5.4.3.3. WET WELL SHALL BE TESTED BY THE MANUFACTURER TO A BAROCOL HARDNESS OF AT LEAST 80% OF THE RESIN MANUFACTURER'S SPECIFIC HARDNESS FOR FULLY CURED RESIN.
   5.4.3.4. THE FOLLOWING PERTINENT AVERAGE MATERIAL PROPERTIES SHALL BE USED IN ANALYSIS FOR FIBERGLASS COMPOSITE IN THE WET WELL.



5.4.3.4.1.	TENSILE MODULUS	900,000 PSI
5.4.3.4.2.	FLEXURAL MODULUS	900,000 PSI
5.4.3.4.3.	TENSILE STRENGTH	10,000 PSI
5.4.3.4.4.	COMPRESSIVE STRENGTH	20,000 PSI
5.4.3.4.5.	POISSON'S RATIO	0.33

  5.4.4. WET WELL DIMENSIONS (REFER CONSTRUCTION DRAWINGS)
 5.5. ACCESSORIES AND FEATURES
  5.5.1. WET WELL TOP FLANGE
   5.5.1.1. THE WET WELL TOP FLANGE SHALL BE DESIGNED AND BUILT TO SUPPORT A 300 LB. VERTICAL FOOT TRAFFIC LOAD. FLANGE DIMENSIONS SHALL BE A MINIMUM OF 3.0INCHES WIDE OR GREATER.
  5.5.2. ANTI - FLOTATION FLANGE
   5.5.2.1. THE WET WELL ANTI-FLOTATION FLANGE SHALL HAVE AN OUTSIDE DIAMETER OF AT LEAST 4. INCHES GREATER THAN THE WALL DIAMETER OF THE WET WELL.
  5.5.3. PIPING STUB - OUTS AND CONNECTIONS
   5.5.3.1. PIPING STUB-OUTS WILL BE INSTALLED BY THE MANUFACTURER. INSTALLATION OF FRP PIPE WILL BE PERFORMED USING FIBERGLASS LAY UP PROCEDURES. ALL RESIN AND FIBERGLASS SHALL BE THE SAME TYPE AND GRADE AS USED IN THE MANUFACTURER OF THE BASIN.
   5.5.3.2. THE LOCATION OF FIELD STUB-OUTS IS SUBJECT TO THE MANUFACTURER'S APPROVAL.
  5.5.4. WET WELL WALL REINFORCEMENT RIB
   5.5.4.1. ALL 6' DIAMETER AND LARGER WET WELLS SHALL BE CONSTRUCTED USING INTEGRAL CONSTRUCTED TRAPEZOIDAL RIBS.
  5.5.5. PUMP MOUNTING BASE AND STUDS
   5.5.5.1. THE PUMP BASE MOUNTING STUDS SHALL BE 300 SERIES STAINLESS STEEL THREADED STUDS.
   5.5.5.2. THE PUMP MOUNTING BASE DETAIL SHALL BE PROVIDED BY THE OWNER.
 5.6. DOCUMENTATION
  5.6.1. CERTIFICATION AND DESIGN
   5.6.1.1. THE MANUFACTURER SHALL VERIFY THAT THE WET WELL HAS BEEN SAMPLED, TESTED AND INSPECTED IN ACCORDANCE WITH THIS SPECIFICATION AND MEETS ALL REQUIREMENTS.
   5.6.1.2. THE MANUFACTURER SHALL PROVIDE ANTI - FLOTATION CALCULATIONS FOR THE DESIGNED WET WELL BASED ON SPECIFIC SITE PARAMETERS.
  5.6.1.3. MARKING AND IDENTIFICATION
   5.6.1.3.1. THE WET WELL SHALL BE MARKED ON THE INSIDE AND OUTSIDE WITH THE FOLLOWING INFORMATION:
    5.6.1.3.1.1. MANUFACTURER'S TRADE NAME OR TRADEMARK
    5.6.1.3.1.2. MANUFACTURER'S LOCATION
    5.6.1.3.1.3. TOTAL HEIGHT AND DIAMETER OF WET WELL
    5.6.1.3.1.4. DATE OF MANUFACTURE
 5.6. WATER TESTING - SURCHARGED HYDROSTATIC TEST ("SHT") FOR TANKS UNDERGROUND FIBERGLASS REINFORCED PLASTIC TANKAGE, AND UNDERGROUND FIBERGLASS REINFORCED PLASTIC WET WELL
  6.1.1. STANDARD TEST
   6.1.1.1. THE STANDARD SURCHARGED HYDROSTATIC TEST SHALL HAVE THE PREFIX SHT FOLLOWED BY THE TEST CRITERION EXPRESSED AS THE MAXIMUM ALLOWABLE PERCENT LOSS PER DAY OF THE TEST WATER VOLUME. STANDARD CRITERIA FOR THE SHT TEST ARE:
    DESIGNATION TIGHTNESS CRITERION
    SHT-NMLNO MEASURABLE LOSS
    SHT-050 0.050% PER DAY
    SHT-VIO VISUAL INSPECTION ONLY
   6.1.1.1.1. SURCHARGED HYDROSTATIC TESTING SHALL BE CONFINED TO TANKS THAT HAVE BEEN DESIGNED AND CONSTRUCTED TO BE FILLED WITH LIQUID TO THE UNDERSIDE OF THE ROOF AND SURCHARGED. THE SURCHARGE TEST PRESSURE, AT THE UNDERSIDE OF THE ROOF HIGH POINT, SHALL BE WITHIN THE LOW PRESSURE RANGE.
   6.1.1.2. TANKS SHALL BE TESTED FOR TIGHTNESS BY CONTRACTOR AND SUBMITTED TO INSPECTOR. THE TEST SHALL BE SHT-050.
  6.1.2. TANK INSPECTION
   6.1.2.1. CLEAN THE EXPOSED SURFACES OF THE TANK, INCLUDING THE FLOOR, OF ALL FOREIGN MATERIAL AND DEBRIS. STANDING WATER IN OR OUTSIDE OF THE TANK THAT WOULD INTERFERE WITH THE OBSERVATION OF THE EXPOSED SURFACES OF THE TANK SHALL BE REMOVED. THE SURFACES AND JOINTS SHALL BE THOROUGHLY INSPECTED FOR POTENTIAL LEAKAGE POINTS. AREAS OF POTENTIAL LEAKAGE SHALL BE REPAIRED PRIOR TO FILLING THE TANK WITH WATER. LINERS THAT ARE MECHANICALLY LOCKED TO THE SURFACE DURING THE PLACEMENT OF THE CONCRETE SHALL BE INSTALLED PRIOR TO THE TANK INSPECTION. THE INSPECTION AND CORRECTIVE ACTION SHALL ALSO BE PERFORMED ON IN-PLACE INTERIOR LINERS.
   6.1.2.2. ALL OPENINGS, FITTINGS, AND PIPE PENETRATIONS IN THE TANK SHELL SHALL BE INSPECTED AT BOTH FACES OF THE TANK. ALL DEFECTS AND/OR CRACKS SHALL BE REPAIRED.
   6.1.2.3. INTERIOR LINERS SHALL BE INSPECTED FOR PINHOLES, TEARS AND PARTIALLY FUSED SPLICES. ALL DEFICIENCIES SHALL BE REPAIRED.
   6.1.2.4. JOINTS AND CRACKS SHALL BE TESTED WITH A VACUUM BOX.
  6.1.3. TEST PREPARATION AND SHT-VIO
   6.1.3.1. ALL TANK PENETRATIONS AND OUTLETS SHALL BE SECURELY SEALED TO PREVENT THE LOSS OF WATER FROM THE TANK DURING THE TEST. IF THE TANK IS TO BE FILLED USING THE TANK INLET PIPE, POSITIVE MEANS SHALL BE PROVIDED TO CHECK THAT WATER IS NOT ENTERING OR LEAVING THE TANK THROUGH THIS PIPE ONCE THE TANK IS FILLED TO TEST LEVEL.
   6.1.3.2. TANK PENETRATIONS AND PIPE, CHANNEL, AND CONDUIT OUTLETS SHALL BE MONITORED BEFORE AND DURING THE TEST TO DETERMINE THE WATERTIGHTNESS OF THESE APPURTENANCES. LEAKAGE AT THESE OUTLETS SHALL BE REPAIRED PRIOR TO TEST MEASUREMENTS. NO ALLOWANCE SHALL BE MADE IN TEST MEASUREMENTS FOR UNCORRECTED KNOWN POINTS OF LEAKAGE. THE FLOW FROM THE UNDERDRAIN SYSTEM SHALL BE MONITORED DURING THIS SAME PERIOD AND ANY INCREASE IN FLOW SHALL BE RECORDED.
   6.1.3.3. THE GROUND WATER LEVEL SHALL BE BROUGHT TO A LEVEL BELOW THE TOP OF THE BASE SLAB AND KEPT AT THAT ELEVATION OR AT A LOWER ELEVATION DURING THE TEST.
   6.1.3.4. AFTER THE TANK INSPECTION HAS BEEN COMPLETED, THE PRESSURE-RELIEF VALVE OR VALVES SHALL BE PLUGGED AND THE TOP OF THE TANK VENTED TO THE ATMOSPHERE. THE TANK SHALL BE FILLED WITH WATER, AT A RATE NOT EXCEEDING 4 FT/H (1.2 M/H), TO THE UNDERSIDE OF THE ROOF WHILE ALLOWING ALL AIR TO FREELY ESCAPE. THE WATER LEVEL SHALL BE KEPT NEAR OR AT THE TOP OF UNLINED OR UNCOATED TANKS FOR A PERIOD OF AT LEAST THREE (3) DAYS PRIOR TO THE TEST.
   6.1.3.5. THE TANK VENT AT THE ROOF HIGH POINT SHALL BE REPLACED WITH AN OPEN ENDED PIPE TO FORM A STANDPIPE. THE DIAMETER OF THE STANDPIPE SHALL NOT BE LESS THAN THE DIAMETER OF THE VENT IT REPLACES NOR MORE THAN SIX TIMES THE VENT DIAMETER. THE TOP OF THE STANDPIPE SHALL BE LOCATED TO LIMIT THE HYDRAULIC SURCHARGE TO 1.25 TIMES THE DESIGN SURCHARGE AT THE HIGH POINT OF THE UNDERSIDE OF THE ROOF. THE STANDPIPE SHALL BE SLOWLY FILLED TO THE POINT OF OVERFLOW.
  6.1.4. TEST MEASUREMENTS
   6.1.4.1. THE DURATION OF THE TEST SHALL BE 1 HOUR. THE WATER TEMPERATURE 18 IN. BELOW THE WATER SURFACE SHALL BE TAKEN AT THE START AND END OF EACH TEST.
   6.1.4.2. THE WATER LEVEL IN THE STANDPIPE SHALL BE MEASURED AFTER 1 HOUR. IF THE WATER LEVEL HAS DROPPED BELOW THE TOP MOST POINT OF THE UNDERSIDE OF THE ROOF OR TO A LEVEL, WITHIN THE STANDPIPE, BELOW THE CALCULATED ALLOWABLE LOSS OF WATER VOLUME FROM THE TANK, THE STANDPIPE SHALL BE REFILLED AND THE TEST REPEATED. HOWEVER, IF THE DROP OF THE WATER SURFACE BELOW THE ALLOWABLE LEVEL CAN BE SHOWN TO BE DUE TO WATER TEMPERATURE CHANGE, THE TANK SHALL BE CONSIDERED TO HAVE MET THE TEST REQUIREMENT. IF THE WATER LEVEL FAILS TO REMAIN WITHIN THE ALLOWABLE RANGE IN THE INITIAL TEST OR UP TO TWO RETESTS, THE TANK SHALL BE REINSPECTED FOR LEAKS IN THE EXTERIOR SURFACE AND THEN DRAINED AND INSPECTED FOR DEFECTS THAT ARE SUSPECTED LEAK LOCATIONS IN THE INTERIOR SURFACES. ALL LEAKS OR POINTS OF SUSPECTED LEAKS SHALL BE REPAIRED AND THE TEST REPEATED.
   6.1.4.3. ONCE THE WATER LEVEL HAS REMAINED WITHIN THE ALLOWABLE RANGE IN THE STANDPIPE FOR THE TEST PERIOD OF 1 HOUR, THE WATER LEVEL SHALL BE KEPT IN THE STANDPIPE WITH A CLOSE VISUAL INSPECTION OF ALL VISIBLE TANK JOINTS AND AROUND HATCHES, MANWAYS, NOZZLES, PIPE CONNECTIONS, AND OTHER OPENINGS AND PENETRATIONS HAS BEEN PERFORMED.
   6.1.4.4. THE WATER LEVEL SHALL THEN BE LOWERED BELOW THE INLETS TO THE PRESSURE-RELIEF VALVES, AND THE PLUGS SHALL BE REMOVED FROM THE RELIEF VALVES. THE OPERATION OF THE RELIEF VALVES SHALL THEN BE CHECKED BY REMOVING THE STANDPIPE, PLUGGING THE AIR VENT, AND INJECTING AIR INTO THE TOP OF THE TANK UNTIL THE PRESSURE IN THE VAPOR SPACE EQUALS THE DESIGN GAUGE PRESSURE. IF THE RELIEF VALVES DO NOT START TO RELEASE AIR AT THE DESIGN PRESSURE, THEY SHALL BE ADJUSTED OR REPAIRED.
   6.1.4.5. UPON COMPLETION OF THE TEST, THE PRESSURE IN THE TANK SHALL BE RELEASED AND THE TANK EMPTIED. A THOROUGH VISUAL INSPECTION SHALL BE MADE OF BOTH THE INSIDE AND OUTSIDE OF THE TANK, GIVING PARTICULAR ATTENTION TO ANY INTERNAL METAL TIES, BRACES, TRUSSES, AND THEIR ATTACHMENTS TO THE WALLS OF THE TANK.
  6.1.5. QUANTITATIVE CRITERIA
   6.1.5.1. THERE SHALL BE NO MEASURABLE LOSS OF WATER FOR TANKS SUBJECTED TO SHT-NML TIGHTNESS TEST. NO MEASURABLE LOSS OF WATER SHALL MEAN A DROP IN WATER SURFACE IN THE STANDPIPE INDICATING LESS THAN 0.01% VOLUME IN 24 HOURS.
   6.1.5.2. THE ALLOWABLE LOSS OF WATER FOR THE SHT-050 TIGHTNESS TEST SHALL NOT CAUSE THE W

XERXES PRECAST DEADMEN

- XERXES DEADMEN ARE ENGINEERED AND DESIGNED TO BE USED WITH XERXES TANKS.
- IN MULTIPLE TANK INSTALLATIONS, EACH TANK REQUIRES ITS OWN SET OF DEADMEN.
- FOR CAST IN PLACE OR DEADMAN CONSTRUCTED OFF SITE, REFER TO XERXES INSTALLATION MANUAL AND OPERATING GUIDELINES FOR PROPER SIZING AND ANCHOR POINT SPECIFICATIONS.

NOTES:
36" Round Manhole with Kevlar Composite Cover, Bolt-down 12" Skirt,
1. Shirt Shall be coated as follows:
 1.1. Surface Prep:
  1.1.1. White Metal Blast Cleaning (SSPC-SP5/NACE1): Removal of all visible rust, mill scale, paint, and foreign matter by blast cleaning by wheel or nozzle (dry or wet) using sand, grit, or shot.
 1.2. Coating
  1.2.1. Epoxy Mortar: High-build, 3-componet amine cured epoxy mortar, shall have a solids content of 100 percent by volume, suitable for long-term immersion and atmospheric exposure to wastewater. Filler-resurfacer compound shall be a 3-component epoxy cementitious thin overlay material used to fill voids and rough areas and must feather-edge capable. Epoxy Glaze (finish) coat shall bea 100 percent solids epoxy suitable for long-term immersion and atmospheric exposure to wastewater.
  1.2.2. Filler/Resurface thin Overlay (Thickness = minimum 1/16"), Tnemec 218 MortarClad, or equal.
  1.2.3. Epoxy Mortar (DFT = 125 mils) Tnemec 434 Perma-Shield, or equal.
  1.2.4. Finish coat (DFT = 15-20 mils), Tnemec 435 Perma-Glaze, or equal.

EQUALIZATION TANK STANDARD DETAILS

GENERAL NOTES, EQUALIZATION TANK AND APPURTENANCES :

1. RELATED DOCUMENTS

2. DRAWINGS AND GENERAL PROVISIONS OF THE CONTRACT, INCLUDING GENERAL AND SUPPLEMENTARY CONDITIONS AND DIVISION 01 SPECIFICATION SECTIONS, APPLY TO THIS SECTION AND THE FOLLOWING NOTES.

3. MANUFACTURER'S FIELD SERVICES

3.1. THE REQUIREMENT

3.1.1. PRIOR TO THE STARTUP OF THE FACILITY, AN EXPERIENCED, COMPETENT, AND AUTHORIZED REPRESENTATIVE OF THE MANUFACTURER OF EACH ITEM OF EQUIPMENT INCORPORATED INTO THE WORK, FOR WHICH FIELD SERVICES ARE INDICATED IN SPECIFIED EQUIPMENT SECTIONS, SHALL VISIT THE SITE OF THE WORK AND INSPECT, CHECK, ADJUST IF NECESSARY, AND APPROVE THE EQUIPMENT INSTALLATION. IN EACH CASE, THE REPRESENTATIVE SHALL REVISIT THE JOBSITE AS OFTEN AS NECESSARY UNTIL ALL TROUBLE IS CORRECTED AND THE EQUIPMENT INSTALLATION AND OPERATION ARE SATISFACTORY IN THE OPINION OF THE ENGINEER. EACH MANUFACTURER'S REPRESENTATIVE SHALLFURNISH TO THE ENGINEER AND THE INSPECTOR A WRITTEN REPORT CERTIFYING THAT THE EQUIPMENT HAS BEEN PROPERLY INSTALLED, AND LUBRICATED; IS IN ACCURATE ALIGNMENT; IS FREE FROM ANY UNDUE STRESS IMPOSED BY CONNECTING PIPING OR ANCHOR BOLTS; AND HAS BEEN OPERATED UNDER FULL LOAD CONDITIONS AND THAT IT OPERATED SATISFACTORILY. ALL COSTS FOR THESE SERVICES SHALL BE INCLUDED IN THE CONTRACTOR'S

4. CONTRACTORS'/MANUFACTURERS' SPECIAL SERVICES

4.1.GENERAL

4.1.1. INSTALLATION ASSISTANCE

4.1.1.1. THE CONTRACTOR SHALL PROVIDE, AT NO ADDITIONAL COST TO THE OWNER, THE SERVICES OF COMPETENT AND EXPERIENCED TECHNICAL PERSONNEL WHO SHALL REPRESENT THE MANUFACTURERS OF ALL EQUIPMENT AND SYSTEMS AS MAY BE NECESSARY TO RESOLVE ASSEMBLY OR INSTALLATION PROBLEMS AT THE WORK SITE WHICH ARE ATTRIBUTABLE TO, OR ASSOCIATED WITH, THE EQUIPMENT FURNISHED.

4.1.2. FUNCTIONAL TESTING

4.1.2.1. FUNCTIONAL (OR RUN) TESTING, IN THE PRESENCE OF THE MANUFACTURER'S REPRESENTATIVE AND ENGINEER, WILL BE REQUIRED FOR EACH ITEM OF EQUIPMENT FOLLOWING INSTALLATION AND WILL BE PERFORMED BY THE CONTRACTOR WITHOUT CHARGE. FUNCTIONAL TESTING IS DEFINED AS THAT TESTING NECESSARY TO DETERMINE IF INSTALLED EQUIPMENT AND SYSTEM WILL OPERATE AS INTENDED.

4.1.2.2. IN ADDITION TO THE FUNCTIONAL TESTS, SPECIFIC PERFORMANCE TESTING OF INSTALLED EQUIPMENT AND SYSTEMS SHALL BE CONDUCTED BY THE CONTRACTOR AS REQUIRED IN THE SPECIFICATION SECTION FOR THE EQUIPMENT OR SYSTEM.

4.1.2.3. THE CONTRACTOR SHALL FURNISH ALL LABOR, MATERIALS, TOOLS, EQUIPMENT, INSTRUCTIONS, AND SERVICES NECESSARY TO PERFORM THE FUNCTIONAL AND PERFORMANCE TESTING.

4.1.2.4. WHEN TECHNICAL ASSISTANCE IS NECESSARY TO RESOLVE PROBLEMS THAT MAY BECOME APPARENT DURING THE FUNCTIONAL OR PERFORMANCE TESTS, THE CONTRACTOR SHALL PROVIDE THE SERVICES OF A MANUFACTURER'S REPRESENTATIVE WHO SHALL PROVIDE SUCH ASSISTANCE AS NECESSARY TO DEMONSTRATE THE SPECIFIED PERFORMANCE.

4.1.3. START_UP

4.1.3.1. WHERE START_UP SERVICES ARE CALLED FOR IN THE SPECIFICATIONS, OR WHEN TECHNICAL ASSISTANCE IS NECESSARY DUE TO ANY MALFUNCTION OF THE EQUIPMENT OR SYSTEM FURNISHED, THE CONTRACTOR SHALL PROVIDE THE SERVICES OF A MANUFACTURER'S REPRESENTATIVE WHO SHALL PROVIDE SUCH SERVICES AS NECESSARY TO PROVIDE THE OWNER WITH AN ACCEPTABLE OPERATING FACILITY.

4.1.4. TRAINING OF OWNER'S PERSONNEL

4.1.4.1. WHERE TRAINING IS CALLED FOR IN THE SPECIFICATIONS, THE CONTRACT SHALL PROVIDE THE SERVICES OF MANUFACTURER'S REPRESENTATIVES WHO SHALL PROVIDE CLASSROOM AND ON_THE_JOB TRAINING FOR THE OWNER'S PERSONNEL IN THE OPERATION AND MAINTENANCE OF THE SPECIFIED EQUIPMENT, AT A SPECIFIED PERIOD OF TIME AND, IF REQUIRED, FOR A RETURN TRAINING CHECK.

4.1.5. SCHEDULING AND COORDINATION OF SERVICES

4.1.5.1. THE CONTRACTOR SHALL DESIGNATE AND PROVIDE ONE PERSON TO BE RESPONSIBLE FOR SCHEDULING, COORDINATION, AND EXPEDITING THE SPECIFIED SERVICES. SCHEDULING SERVICES SHALL BE DONE IN COOPERATION WITH, AND WITH THE ACCEPTANCE OF THE ENGINEER AND OWNER'S OPERATING PERSONNEL. SUCH SCHEDULE SHALL BE ARRANGED WITH THE APPROPRIATE SUBCONTRACTORS, MANUFACTURERS, AND SUPPLIERS IN SUFFICIENT TIME TO ASSURE THEIR COMPLIANCE WITH THE SERVICE REQUIREMENTS.

4.1.6. COST FOR SERVICES

4.1.6.1. COSTS FOR PROVIDING SERVICES DURING INSTALLATION, TESTING, AND FOR THE TRAINING OF OWNER'S PERSONNEL SHALL BE INCLUDED IN THE COSTS FOR PROVIDING THE APPLICABLE SPECIFIED EQUIPMENT.

4.1.6.2. WHERE THE NUMBER OF DAYS FOR SERVICES IS STATED IN THE SPECIFICATIONS, THIS SHALL BE CONSIDERED AS THE MINIMUM NUMBER OF DAYS. SHOULD ADDITIONAL TIME BE REQUIRED FOR SERVICES, SUCH TIME SHALL BE AT THE EXPENSE OF THE MANUFACTURER, SUPPLIER, OR CONTRACTOR AS APPLICABLE, AND AT NO ADDITIONAL COST TO THE OWNER.

4.1.6.3. WHERE THE NUMBER OF DAYS FOR SERVICES IS NOT STATED IN THE SPECIFICATIONS, SERVICES SHALL BE FURNISHED FOR INSTALLATION, TESTING, AND START_UP AS REQUIRED TO PROVIDE THE OWNER WITH A SATISFACTORY OPERATING FACILITY.

4.2.START_UP AND DEMONSTRATION

4.2.1. SYSTEM DESCRIPTION FOR PROJECT

4.2.1.1. IN ORDER TO ESTABLISH A BASIS OF UNDERSTANDING FOR SYSTEM DESCRIPTION FOR THIS PROJECT, A SYSTEM SHALL BE DEFINED AS FOLLOWS: A SYSTEM IS AN ARRANGEMENT OF ITEMS OF EQUIPMENT, COMPONENTS, PIPING, WIRING, MATERIALS, OR INCIDENTALS SO RELATED OR CONNECTED TO FORM A FUNCTIONAL AND OPERATIONAL UNITY.

4.2.2. PRE_START-UP PERIOD

4.2.2.1. PRIOR TO STARTUP, CONTRACTOR SHALL OBSERVE THE FOLLOWING PROCEDURES BY SEQUENCE:

4.2.2.2. INSURE BY CHECKLIST SUBMITTED TO OWNER THAT ALL REQUIRED WRITTEN STATEMENTS FROM MANUFACTURERS BY INDIVIDUAL SECTIONS OF SPECIFICATIONS ARE RECEIVED AND COMPLY TO CONTRACT DOCUMENTS.

4.2.2.3. INSURE WORK IS COMPLETE BEFORE STARTUP OF ANY UNIT OR SYSTEM. CERTIFY TO OWNER THAT SPECIFICALLY REQUIRED SERVICES OF RESPECTIVE EQUIPMENT MANUFACTURER'S REPRESENTATIVE BY INDIVIDUAL SECTIONS OF SPECIFICATIONS HAVE BEEN PERFORMED IN ACCORDANCE WITH CONTRACT DOCUMENTS.

4.2.2.4. INSURE SYSTEMS ARE TESTED HYDRAULICALLY, MECHANICALLY, AND ELECTRICALLY. INSURE SYSTEMS WHICH REQUIRE CALIBRATION, COMMISSIONING, AND BALANCING ARE FULLY CERTIFIED AS COMPLETE IN PERFORMANCE IN ACCORDANCE WITH CONTRACT DOCUMENTS.

4.2.2.5. INSURE SYSTEM IS PROPERLY SEEDED AND BIOLOGICALLY PREPARED AND PRODUCING TREATED WATER IN ACCORDANCE WITH THE APPLICABLE CONTROL AGENCIES

4.2.2.6. SCHEDULE STARTUP A MINIMUM OF 15 DAYS PRIOR TO STARTUP DATE BY WRITTEN NOTICE ISSUED TO BUT NOT NECESSARILY LIMITED TO: OWNER, ENGINEER, SUBCONTRACTORS, AND APPLICABLE CONTROL AGENCIES.

4.2.2.7. PROVIDE ALL LABOR, SUPERVISION, EQUIPMENT, VEHICLES OR ANY OTHER ITEM NECESSARY TO STARTUP, OPERATE, AND DEMONSTRATE THE SYSTEM.

4.2.3. START-UP AND DEMONSTRATION PERIOD

4.2.3.1. THE CONTRACTOR SHALL STARTUP, OPERATE AND DEMONSTRATE THE SPECIFIED PERFORMANCE OF EACH ITEM OF EQUIPMENT AND EACH SYSTEM ON BASIS OF 30 DAYS OF FULL OPERATION WITHOUT INTERRUPTION OF EQUIPMENT OR SYSTEM OR NEED OF ADJUSTMENT OR REPAIR.

4.2.3.2. DURING STARTUP WITH EQUIPMENT IN OPERATION, THE CONTRACTOR SHALL PROVIDE KNOWLEDGEABLE PERSONNEL TO INSTRUCT OWNERS DESIGNATED PERSONNEL ON OPERATION AND MAINTENANCE OF EACH SYSTEM. THIS SERVICE SHALL BE IN ADDITION TO SERVICES PROVIDED BY INDIVIDUAL MANUFACTURER'S AUTHORIZED REPRESENTATIVE(S) PRESCRIBED BY INDIVIDUAL SECTIONS OF THE SPECIFICATIONS. INSTRUCTIONS DURING THIS STARTUP PERIOD SHALL BE OVERVIEW IN NATURE AND NOT A REPEAT OF PREVIOUS OPERATION AND MAINTENANCE INSTRUCTIONS.

4.2.3.3. CONTRACTOR SHALL DEMONSTRATE THE TREATMENT SYSTEM WILL MEET LOCAL, STATE, AND FEDERAL DISCHARGE REQUIREMENTS FOR A DURATION OF 180 CONSECUTIVE DAYS OF FULL OPERATION WITHOUT INTERRUPTION OF EQUIPMENT OR SYSTEM OR NEED OF ADJUSTMENT OR REPAIR OTHER THAN "NORMAL" OPERATIONAL ADJUSTMENTS.

4.2.4. POST_START-UP AND DEMONSTRATION PERIOD

4.2.4.1. AFTER SUCCESSFUL COMPLETION OF THE STARTUP AND DEMONSTRATION PERIOD, THE OWNER WILL FURNISH ALL OPERATIONAL LABOR, UTILITIES, CHEMICALS, EXPENDABLES AND COST OF NORMAL WEAR FOR THE EQUIPMENT OR SYSTEM OF DIRECT SHUT DOWN AND PROTECTION OF THE SYSTEM UNTIL TOTAL PROJECT ACCEPTANCE. ALL SYSTEMS AND EQUIPMENT SHALL BE CLEAN AT THE COMPLETION OF THEIR STARTUP AND DEMONSTRATION PERIOD.

4.3.SUBMITTALS

4.3.1. SHOP DRAWINGS SHALL INCLUDE THE FOLLOWING:

4.3.1.1. GENERAL ARRANGEMENTS

4.3.1.2. PROCESS AND INSTRUMENTATION DIAGRAMS (P&IDS)

4.3.1.3. ELECTRICAL SCHEMATICS

4.3.1.4. LIFTING DIAGRAM

4.3.1.5. ANCHOR DIAGRAM

4.3.1.6. EQUIPMENT LIST AND CUT SHEETS

4.3.2. THE O&M MANUAL SHALL INCLUDE THE FOLLOWING:

4.3.2.1. WARRANTIES

4.3.2.2. FACTORY TEST REPORTS

4.3.2.3. OPERATING INSTRUCTIONS

4.3.2.4. FUNCTIONAL DESCRIPTION

4.3.2.5. CALCULATIONS

4.3.2.6. MAINTENANCE SCHEDULE

4.3.2.7. TROUBLESHOOTING GUIDE

4.3.2.8. MEMBRANE MODULE REPAIR INSTRUCTIONS

4.3.2.9. STORAGE REQUIREMENTS

4.3.2.10. TRAINING MATERIAL

4.3.2.11. INSTALLATION AND COMMISSIONING PROCEDURES

4.3.2.12. DRAWINGS

4.3.2.13. LIST OF MATERIALS

4.4.SPARE PARTS

4.4.1. GENERAL

4.4.1.1. THE SPARE PARTS SUPPLIER MUST BE THE MANUFACTURER OR A FACTORY AUTHORIZED REPRESENTATIVE OF THE MANUFACTURER. THE MANUFACTURER WILL BE RESPONSIBLE FOR ANY DEFAULT OF THE REPRESENTATIVE THAT IS NOT CORRECTED BY THE REPRESENTATIVE IN A TIMELY AND EFFICIENT MANNER. THIS RESPONSIBILITY INCLUDES REPLACING INCORRECT OR DEFECTIVE PARTS, TROUBLE SHOOTING, AND CORRECTING PROBLEMS THAT ARE TRACEABLE TO THE MANUFACTURER'S PARTS. THE SUPPLIER SHALL PROVIDE, ALONG WITH THE SPARE PARTS LIST, A FORMAL LETTER OF CERTIFICATION FROM THE MANUFACTURER THAT THE SUPPLIER IS AN AUTHORIZED REPRESENTATIVE OF THE MANUFACTURER.

4.4.1.2. THE SUPPLIER SHALL BE A STOCKING FACILITY OF THE MANUFACTURER OF THE PROPOSED PARTS, OR THE MANUFACTURER MUST MAINTAIN A STOCKING FACILITY OF THESE PARTS ON THE WEST COAST, OR THE SUPPLIER CAN GUARANTEE DELIVERY OF SPARE PARTS WITHIN SEVENTY-TWO (72) HOURS.

4.4.1.3. SPARE PARTS SHOULD BE SUPPLIED IN THE MANUFACTURER'S ORIGINAL PACKAGING AND SHALL BE NEW AND UNUSED. A STATEMENT SHALL BE INCLUDED TO CLEARLY INDICATE THAT THE SPARE PARTS ARE NEW AND UNUSED.

4.4.1.4. THE SPARE PARTS LIST SHALL BE IN ADDITION TO ANY OTHER LISTS REQUIRED UNDER ANY OTHER SECTIONS OF THESE SPECIFICATIONS. THIS LIST SHALL INCLUDE BUT IS NOT LIMITED TO THE FOLLOWING:

4.4.1.4.1. CURRENT PRICES INCLUDING DELIVERY TO THE JOBSITE.

4.4.1.4.2. ORIGINAL EQUIPMENT MANUFACTURER (OEM) PART NUMBERS, WHICH IDENTIFY INTERCHANGEABILITY.

4.4.1.4.3. MAKE AND TYPE OF EQUIPMENT AS WELL AS MODEL NUMBER.

4.4.1.4.4. SIZE.

4.4.1.4.5. SUPPLIER'S ADDRESS AND TELEPHONE NUMBER.

4.4.1.4.6. LETTER OF CERTIFICATION FROM THE MANUFACTURER.

4.4.1.4.7. MATERIALS.

4.4.1.4.8. SPECIAL TOOLS.

4.4.1.4.9. ESTIMATED DELIVERY LEAD TIMES.

4.4.1.4.10. WARRANTY: STATE TERMS OF WARRANTY OF SPARE PARTS OFFERED.

4.4.1.4.11. CROSS-SECTIONAL, EXPLODED VIEW OR ASSEMBLY-TYPE DRAWING WITH PART NUMBERS.

4.4.1.4.12. MANUFACTURER'S PRICE LIST CATALOG.

4.4.1.4.13. APPLICABLE TRADE DISCOUNT (FOR BUDGET PURPOSES)

4.4.1.5. DELIVERY OF ALL REQUIRED SPARE PARTS SHALL BE A CONDITION PRECEDENT TO RECEIPT OF PARTIAL COMPLETION OR A STATEMENT OF COMPLETION.

4.4.1.6. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROPER STORAGE AND PROTECTION OF THE SPARE PARTS UNTIL DELIVERED TO THE OWNER.

4.4.1.7. TO ENSURE PROPER TRACKING OF THE SPARE PARTS THE CONTRACTOR SHALL FILL OUT AND SUBMIT REQUIRED INFORMATION, ON THE FORMS PROVIDED BY THE ENGINEER, TO THE INSPECTOR WITH THE DELIVERY OF SPARE PARTS. THE CONTRACTOR'S COST OF PREPARING AND SUBMITTING THE SPARE PARTS LIST(S), PROCURING, AND INSPECTION OF THE SPARE PARTS SHALL BE INCLUDED IN THE CONTRACTOR'S LUMP SUM BID, AND THEREFORE, NO OVERHEAD OR PROFIT SHALL BE ADDED TO THE COST OF THE SPARE PARTS.

4.4.2. REQUIRED SPARE PARTS

4.4.2.1. THE REQUIRED SPARE PARTS LISTS SHALL BE INCLUDED WITH THE EQUIPMENT SUBMITTAL TO THE ENGINEER.

4.4.2.2. THE CONTRACTOR SHALL INCLUDE IN THE BID THE COST OF PROVIDING THE REQUIRED SPARE PARTS DESCRIBED UNDER INDIVIDUAL EQUIPMENT SPECIFICATIONS.

4.4.3. RECOMMENDED SPARE PARTS

4.4.3.1. THE CONTRACTOR SHALL SUBMIT WITH EACH EQUIPMENT SUBMITTAL A LIST FROM THE MANUFACTURER OF THE RECOMMENDED SPARE PARTS ADEQUATE TO ENSURE TWO (2) CONTINUOUS YEARS OF NORMAL OPERATION AFTER EXPIRATION OF THE EQUIPMENT WARRANTY. THE COST OF PREPARING AND SUBMITTING THE SPARE PARTS LIST(S) SHALL BE INCLUDED IN THE CONTRACTOR'S LUMP SUM BID.

4.4.3.2. THE RECOMMENDED SPARE PARTS LIST(S) SHALL INCLUDE ITEMS REQUIRING REPLACEMENT UNDER THE FOLLOWING CONDITIONS:

4.4.3.2.1.WEAR, CORROSION, OR EROSION DURING NORMAL OPERATION.

4.4.3.2.2.FAILURE WHICH CAUSES A SHUTDOWN OF EQUIPMENT OR SYSTEMS.

4.4.3.2.3.DAMAGE OR BREAKAGE DURING ROUTINE MAINTENANCE OR INSPECTIONS OF EQUIPMENT.

4.4.3.2.4.CUSTOM OR SPECIALLY FABRICATED PARTS, AND

4.4.3.2.5.LONG LEAD ITEMS.

4.4.3.3. IF AN ALLOWANCE FOR RECOMMENDED SPARE PARTS HAS BEEN INCLUDED AS A BID ITEM IN THE SCHEDULE OF WORK AND PRICES IN VOL. 1 OF THE PROPOSAL, THE CONTRACTOR SHALL PROCURE SUCH RECOMMENDED SPARE PARTS AS DIRECTED BY THE ENGINEER. THE ENGINEER WILL COMPILE, FROM THE CONTRACTOR'S SUBMITTAL, A LIST IDENTIFYING WHICH RECOMMENDED SPARE PARTS ARE APPROVED FOR PURCHASE. THE OWNER WILL PAY, FROM THE RECOMMENDED SPARE PARTS ALLOWANCE, THE VENDOR-INVOICED PRICES PLUS DELIVERY COST ONLY, WITHOUT MARKUP FOR OVERHEAD OR PROFIT. IF THE TOTAL COST DIFFERS FROM THE AMOUNT SET FORTH IN THE SCHEDULE OF WORK AND PRICES, THE CONTRACT PRICE SHALL BE ADJUSTED BY A CHANGE ORDER FOR THE DIFFERENCE AS AN ADDITIONAL AMOUNT DUE THE CONTRACTOR, OR A CREDIT TO THE OWNER, AS APPROPRIATE.

4.4.3.4. APPROVAL OF THE INDIVIDUAL EQUIPMENT SUBMITTAL DOES NOT CONSTITUTE AUTHORIZATION TO PROCURE THE RECOMMENDED SPARE PARTS.

4.4.4. PRICES CHARGED TO THE OWNER ARE BASED ON A PERCENTAGE DISCOUNT FROM THE MANUFACTURER'S PUBLISHED PRICE LIST(S) SHALL NOT BE SUBJECT TO CHANGE FOR A PERIOD OF SIXTY (60) CALENDAR DAYS AFTER BID OPENING. IF PRICES ON THE PRICE LIST(S) ARE RAISED, THE OWNER RESERVES THE RIGHT TO ACCEPT THE RAISE OR TO CANCEL SUCH ITEMS FROM THE CONTRACT. THE OWNER IS TO BE GIVEN BENEFIT OF ANY DECLINE IN PRICES IMMEDIATELY UPON THE MANUFACTURER'S EFFECTIVE DATE OF SUCH DECLINE. CHANGES IN PRICE LIST(S) SHALL BE EFFECTIVE ON THE DATE OF THE MANUFACTURER'S EFFECTIVE DATE OF CHANGE. INCREASE IN PRICES SHALL NOT BE RETROACTIVE.

5. TREATMENT PLANT PIPING IDENTIFICATION SYSTEMS

5.1.GENERAL

5.1.1. THE REQUIREMENT

5.1.1.1. THE CONTRACTOR SHALL FURNISH, MARK, AND INSTALL IDENTIFICATION DEVICES FOR ALL EXPOSED PIPING AND PIPING IN ACCESSIBLE CHASES AND AREAS ABOVE CEILINGS WITH PANELS, AND VALVES USING COLOR BANDS, LETTERING, FLOW DIRECTION ARROWS, AND RELATED PERMANENT IDENTIFICATION DEVICES, AND ALL APPURTENANT WORKS, IN ACCORDANCE WITH THE REQUIREMENTS OF THE CONTRACT DOCUMENTS.

5.1.2. REFERENCE SPECIFICATIONS, CODES AND STANDARDS

5.1.2.1. COMPLY WITH THE REFERENCE SPECIFICATIONS OF THE GENERAL REQUIREMENTS.

5.1.3. CONTRACTOR SUBMITTALS

5.1.3.1. SUBMITTALS SHALL BE MADE IN ACCORDANCE WITH GENERAL REQUIREMENTS.

5.1.3.2. THE FOLLOWING SUBMITTALS AND SPECIFIC INFORMATION SHALL BE PROVIDED:

5.1.3.2.1.THE CONTRACTOR SHALL SUBMIT SAMPLES OF ALL TYPES OF IDENTIFICATION DEVICES TO BE USED IN THE WORK.

5.1.3.2.2.THE CONTRACTOR SHALL SUBMIT TO THE ENGINEER, FOR APPROVAL, A LIST OF SUGGESTED WORDING FOR ALL VALVE TAGS PRIOR TO FABRICATION.

5.2.PRODUCTS

5.2.1. IDENTIFICATION OF PIPING

5.2.1.1. ALL EXPOSED PIPING AND PIPING IN ACCESSIBLE CHASES AND AREAS ABOVE CEILINGS WITH PANELS, INCLUDING STAINLESS STEEL, GALVANIZED STEEL, COPPER, PVC, AND FIBERGLASS RTR PIPING, SHALL BE COMPLETELY AND TOTALLY PAINTED FOR IDENTIFICATION PURPOSES. PIPING SHALL BE IDENTIFIED WITH LETTERING OR TAGS DESIGNATING THE SERVICE FOR EACH PIPING SYSTEM. SHALL HAVE FLOW DIRECTIONAL ARROWS, AND SHALL BE COMPLETELY PAINTED AND COLOR CODED AS SCHEDULED BELOW. ALL PIPING SCHEDULED TO BE COLOR CODED SHALL BE COMPLETELY PAINTED OR COATED WITH THE INDICATED COLORS.

5.2.1.2. EACH PIPE IDENTIFICATION SHALL CONSIST OF COLOR CODING IN ACCORDANCE WITH PARAGRAPH 3.4 IDENTIFICATION SCHEDULE. A PAINTED LABEL AND A DIRECTIONAL FLOW ARROW. THE PAINTED LABEL AND DIRECTIONAL ARROW SHALL BE PLACED BETWEEN COLOR BANDS. WHEN MORE THAN ONE COLOR BAND IS USED THE DIFFERENT COLOR BANDS SHALL BE PAINTED ADJACENT. PIPING IDENTIFICATION SHALL BE LOCATED IN ACCORDANCE WITH PARAGRAPH 3.3 PIPE IDENTIFICATION LOCATION.

5.2.1.3. COLOR BANDS AND ARROWS: PIPE COLOR BANDS SHALL BE PAINTED ON THE PIPE. PAPER OR PLASTIC BANDING OF PIPE SHALL NOT BE ACCEPTABLE. ARROWS SHALL BE OF THE SAME COLOR AS THE LETTERING AND SHALL POINT AWAY FROM THE LETTERED LABELS IN THE DIRECTION OF THE FLOW. CHLORINATED SERVICE SHALL BE IDENTIFIED BY A YELLOW SECOND BAND. COLOR BAND SIZE SHALL BE AS FOLLOWS:

PIPE SIZE	COLOR BAND SIZE
LESS THAN 1" DIAMETER	1" WIDE
1" TO 12" DIAMETER	PIPE DIAMETER WIDE
GREATER THAN 12" DIAMETER	12" WIDE
YELLOW SECOND BAND:	
LESS THAN 1" DIAMETER	½" WIDE
1" TO 12" DIAMETER	½ PIPE DIAMETER
GREATER THAN 12" DIAMETER	6" WIDE

5.2.1.4. FOR CASES WHERE THERE ARE INSULATED LINES WRAPPED WITH ALUMINUM SHEATHING, STAINLESS STEEL SHEATHING, OR GRAY FABRIC, THE BACKGROUND COLOR SHALL BE APPLIED TO A 24 INCH LENGTH OF PIPE SECTION AND COLOR BAND CENTERED WITHIN THE 24 INCH FIELD OF BACKGROUND COLOR.

5.2.1.5. PAINT COLORS: PAINT COLORS SHALL CONFORM TO THE FOLLOWING DESIGNATIONS:

COLOR	FEDERAL NUMBER
LIGHT BLUE	15200
DARK BLUE	15102
RED	11105
YELLOW	13655
ORANGE	12246
WHITE	17875
LIGHT BROWN	10219
DARK BROWN	10080
LIGHT GREEN	34540
GREEN	14187
BLACK	17038
SILVER	17178
GREY	16314
PURPLE	27144
PURPLE*	PANTONE 512C

*FOR RECLAIMED WATER

5.2.1.6. LETTERING: CONTENTS IDENTIFICATION LABELS SHALL BE STENCILED DIRECTLY ON PIPES. BLACK IDENTIFICATION LETTERS SHALL BE USED WHERE THE BACKGROUND PIPE COLOR IS LIGHT, AND WHITE IDENTIFICATION LETTERS WHERE THE BACKGROUND COLOR IS DARK. THE SIZE OF THE LETTERS FOR IDENTIFICATION LABELS SHALL BE AS FOLLOWS:

PIPE OUTSIDE DIAMETER	LETTER SIZE
5/8" TO 1"	5/16" HIGH
1" TO 3"	3/4" HIGH
OVER 3"	2" HIGH

5.2.2. IDENTIFICATION OF VALVES AND SHORT PIPE LENGTHS

5.2.2.1. IDENTIFYING DEVICES FOR VALVES AND THE SECTIONS OF PIPE THAT ARE TOO SHORT TO BE IDENTIFIED WITH COLOR BANDS, LETTERED LABELS, AND ARROWS SHALL BE IDENTIFIED WITH METAL TAGS AS SPECIFIED HEREIN.

5.2.2.2. METAL TAGS SHALL BE OF STAINLESS STEEL WITH EMBOSSED LETTERING. ALL TAGS SHALL BE DESIGNED TO BE FIRMLY ATTACHED TO THE VALVES OR SHORT PIPES OR TO THE STRUCTURE IMMEDIATELY ADJACENT TO SUCH VALVES OR SHORT PIPES.

5.2.3. IDENTIFICATION OF PIPE 5/8 INCH OR SMALLER

5.2.3.1. WHERE THE OUTSIDE DIAMETER OF PIPE OR PIPE COVERING IS 5/8 INCH OR SMALLER, METAL TAGS SHALL BE PROVIDED INSTEAD OF LETTERING. TAGS SHALL HAVE THE SPECIFIED IDENTIFYING LETTERING STAMPED IN THE TAG AND SHALL BE FASTENED TO THE PIPE WITH SUITABLE CHAINS. METAL TAGS AND CHAINS SHALL BE ALUMINUM OR STAINLESS STEEL. WHERE TAGS ARE USED, PIPE SHALL BE COLOR CODED AS SPECIFIED IN PARAGRAPH 3.04.

5.2.4. MISCELLANEOUS

5.2.4.1. ELECTRICAL CONDUIT SHALL BE PAINTED TO MATCH CEILING OR WALL SURFACES AS DIRECTED BY THE ENGINEER.

5.2.4.2. VENT LINES SHALL BE PAINTED TO MATCH THE SURFACES THAT THEY ADJOIN.

5.2.4.3. VALVE HANDWHEELS AND LEVERS SHALL BE PAINTED RED.

5.3.EXECUTION

5.3.1. GENERAL

5.3.1.1. ALL LABELS AND IDENTIFICATION TAGS SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S PRINTED INSTRUCTIONS, AND SHALL BE NEAT AND UNIFORM IN APPEARANCE. ALL SUCH TAGS OR LABELS SHALL BE READILY VISIBLE FROM ALL NORMAL WORKING LOCATIONS.

5.3.2. VALVE TAGS

5.3.2.1. VALVE TAGS SHALL BE PERMANENTLY ATTACHED TO THE VALVE OR STRUCTURE BY MEANS OF 2 STAINLESS STEEL BOLTS OR SCREWS.

5.3.3. THE WORDING ON THE VALVE TAGS SHALL DESCRIBE THE EXACT FUNCTION OF EACH VALVE, E.G., "HWR-BALANCING," "CLS THROTTLING", "RAS-PUMP SHUT-OFF," ETC.

5.3.4. PIPE IDENTIFICATION LOCATION

5.3.4.1. STRAIGHT LINES OF PIPE SHALL BE IDENTIFIED AT INTERVALS OF 30 FEET MAXIMUM, AND AT LEAST ONCE IN EACH ROOM UNLESS OTHERWISE DIRECTED BY THE ENGINEER.

5.3.4.2. PIPING SHALL ALSO BE IDENTIFIED AT A POINT APPROXIMATELY WITHIN 2 FEET OF ALL TURNS, ELLS, VALVES, AND ON THE UPSTREAM SIDE OF ALL DISTRIBUTION FITTINGS OR BRANCHES AND ON BOTH SIDES OF EACH FLOOR, WALL OR BARRIER THROUGH WHICH THE LINE PASSES.

5.3.4.3. FOR PIPE RUNS OF 50 FEET OR LESS THE DISTANCE BETWEEN BANDS SHALL BE 30 INCHES. FOR PIPE RUNS OF 50 FEET OR MORE, SPACING BETWEEN BANDS SHALL BE 72 INCHES.

5.3.4.4. SECTIONS OF PIPE THAT ARE TOO SHORT TO BE IDENTIFIED WITH COLOR BANDS, LETTERED LABELS, AND DIRECTIONAL ARROWS SHALL BE TAGGED AND IDENTIFIED SIMILAR TO VALVES.

5.3.5. IDENTIFICATION SCHEDULE

5.3.5.1. APPLICATION OF IDENTIFYING DEVICES SHALL CONFORM TO THE FOLLOWING COLOR CODES, OR MATCH EXISTING COLOR CODE AS DIRECTED BY THE ENGINEER.

MATERIAL IN PIPE	BACKGROUND COLOR	BAND COLOR(S)
POTABLE WATER	RP DEVICE	LIGHT BLUE
FRESH WATER (AIR GAP)	LIGHT BLUE	
INDUSTRIAL AND/OR COOLING WATER		
RECLAIMED WATER	PURPLE* (PANTONE 512 C)	
FINAL EFFLUENT	DARK BLUE	RED
SODIUM BICARBONATE	YELLOW	
MICRO-C	WHITE	YELLOW
VENT	GREEN	GREY
RAW SLUDGE	DARK BROWN	
WASTE ACTIVATED SLUDGE	LIGHT BROWN	
THICKENED WASTE ACTIVATED SLUDGE	LIGHT BROWN	
RETURN ACTIVATED SLUDGE	LIGHT BROWN	
GRIT	DARK BROWN	
MIXED LIQUOR	LIGHT BROWN	
PROCESS EFFLUENT	DARK BLUE	RED
FINAL CLARIFIER INFLUENT	LIGHT BROWN	
PROCESS AIR	GREEN	
PLANT DRAIN	BLACK	
STORM DRAIN	BLACK	
SUMP PUMP DISCHARGE	BLACK	
SANITARY SEWER	BLACK	
SANITARY VENT	BLACK	
INFLUENT RAW SEWAGE (UP TO PRIMARY TANKS)	GREY	

6. ONSITE WASTEWATER TREATMENT SYSTEM COMPONENTS

6.1.RISERS & LIDS:

6.1.1. RISERS

6.1.1.1. RISERS SHALL BE RIBBED PVC AS MANUFACTURED BY ORENCO SYSTEMS . INC. THE MATERIAL SHALL BE PVC AS PER ASTM D_1784 AND TESTED IN ACCORDANCE WITH AASHTO M304M_86 RISERS SHALL EXTEND TO TWO INCHES ABOVE THE GROUND SURFACE TO ALLOW FOR SETTLEMENT AND SHALL HAVE A MINIMUM NOMINAL DIAMETER OF 21 INCHES.

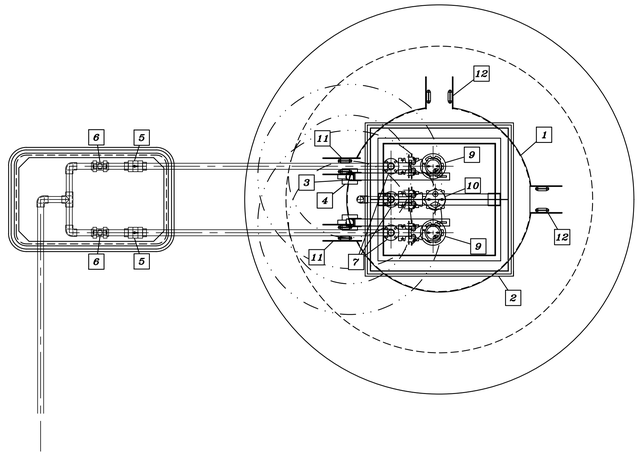
6.1.1.2. WHEN BONDING TO CONCRETE OR FIBERGLASS GROOVES, A TWO_PART EPOXY, ONE PINT REQUIRED PER 21 INCH OR 24 INCH DIAMETER RISER AND ONE QUART REQUIRED FOR 30 INCH DIAMETER RISER, MODEL ADHP10 OR ADHQ10, OR EQUAL SHALL BE USED. WHEN BONDING TO A FLANGED RISER TANK ADAPTER, EITHER A TWO_PART EPOXY, MODEL MA 320 OR EQUAL, OR A SINGLE COMPONENT ADHESIVE MODEL ADH100 OR EQUAL SHALL BE USED.

6.1.2. LIDS:

6.1.2.1. ONE SHALL BE FURNISHED WITH EACH ACCESS RISER. LIDS SHALL BE ORENCO SYSTEMS . INC. MODEL FL21G, FL24G, OR FL30G, AS APPROPRIATE. FIBERGLASS WITH GREEN NON_SKID FINISH, AND PROVIDED WITH URETHANE GASKET, STAINLESS STEEL BOLTS, AND WRENCH. THE RISER AND LID COMBINATION SHALL BE ABLE TO SUPPORT A 2500 LB. WHEEL LOAD. MODEL AND DIAMETER AS SHOWN IN CONTRACT DRAWINGS .

7. POLYVINYL CHLORIDE (PVC) PRESSURE PIPE

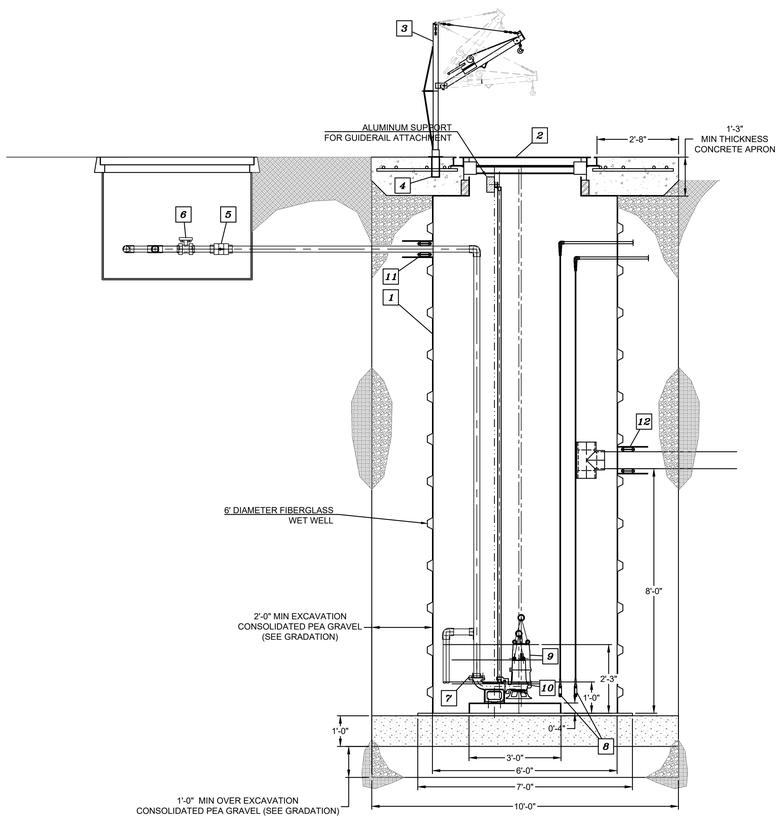
7.1.GENERAL



7.1.1. WORK INCLUDED:

7.1.1.1. THIS SECTION COVERS THE FURNISHING AND INSTALLATION OF DUCTILE IRON PIPE AND FITTINGS, STEEL PIPE AND FITTINGS, PVC PRESSURE PIPE AND FITTINGS, PVC NON-PRESSURE PIPE AND FITTINGS, REINFORCED CONCRETE PIPE AND FITTINGS, CORRUGATED POLYETHYLENE PIPE AND FITTINGS AND STEEL CASING PIPE.

7.1.1.2. ALL PIPING SHALL BE PVC SCHEDULE 80 UNLESS SPECIFIED AS OTHER MATERIAL ON PROCESS DIAGRAM. ALL AIR PIPING SHALL BE



7.2.SPECIFICATIONS

9	2	TSURUMI TOS50MG22.2 LIFT STATION TRANSFER GRINDER PUMP AND SLIDE RAIL SYSTEM 1. MATERIALS OF CONSTRUCTION CONSTRUCTION OF MAJOR PARTS OF THE PUMPING UNIT(S) INCLUDING PUMP CASING, IMPELLER, AND DISCHARGE ELBOW SHALL BE MANUFACTURED FROM GRAY CAST IRON, ASTM A48 CLASS 35. INTERNAL AND EXTERNAL SURFACES COMING INTO CONTACT WITH THE PUMPAGE SHALL BE PROTECTED BY A FUSED POLYMER COATING. ALL EXPOSED FASTENERS SHALL BE STAINLESS STEEL. ALL UNITS SHALL BE FURNISHED WITH A DISCHARGE ELBOW WITH 150 LB. (10 KG/CM2) FLAT FACE FLANGE AND NPT COMPANION FLANGE. IMPELLERS SHALL BE OF THE SEMI-VORTEX, SOLIDS HANDLING DESIGN EQUIPPED WITH BACK PUMP OUT VANES AND SHALL BE SLIP FIT TO THE SHAFT AND KEY DRIVEN. THE GRINDING UNITS SHALL PROVIDE HORIZONTAL AND VERTICAL GRINDING ACTION. BOTH ROTATING AND STATIONARY GRINDING UNITS SHALL BE HARDENED HIGH CHROME CAST IRON RATED AT 60 HRC. THE PUMP CASING SHALL INCORPORATE AN AIR RELIEF PORT. 2 MECHANICAL SEAL . ALL UNITS SHALL BE FURNISHED WITH A DUAL INSIDE MECHANICAL SHAFT SEAL LOCATED COMPLETELY OUT OF THE PUMPAGE, RUNNING IN A SEPARATE OIL FILLED CHAMBER AND FURTHER PROTECTED BY AN EXCLUSIONARY OIL SEAL LOCATED BETWEEN THE BOTTOM SEAL FACES AND THE FLUID BEING PUMPED. THE OIL CHAMBER SHALL BE FITTED WITH A DEVICE THAT SHALL PROVIDE POSITIVE LUBRICATION OF TOP MECHANICAL SEAL, (DOWN TO ONE THIRD OF THE STANDARD OIL LEVEL). THE DEVICE SHALL NOT CONSUME ANY ADDITIONAL ELECTRICAL POWER. MECHANICAL SEALS SHALL RATED TO PRECLUDE THE INCURSION OF WATER UP TO 42.6 PSI. (98.4 FT.). UNITS SHALL HAVE SILICON CARBIDE MECHANICAL SEAL FACES. MECHANICAL SEAL HARDWARE SHALL BE STAINLESS STEEL. 3 MOTOR THE PUMP MOTORS SHALL BE 3 HP., 460 V., 60 HZ., 3 PHASE AND SHALL BE NEMA MG-1, DESIGN TYPE B EQUIVALENT. MOTOR(S) SHALL HAVE A 1.15 SERVICE FACTOR AND SHALL BE RATED FOR 20 STARTS PER HOUR. MOTOR(S) SHALL BE AIR FILLED, COPPER WOUND, CLASS E INSULATED WITH BUILT IN THERMAL AND OVER CAMPERAGE PROTECTION FOR EACH WINDING. MOTOR SHAFT SHALL BE 403 OR 420 STAINLESS STEEL AND SHALL BE SUPPORTED BY TWO PERMANENTLY LUBRICATED, HIGH TEMPERATURE BALL BEARINGS, WITH A B-10 LIFE RATING AT BEST EFFICIENCY POINT OF 60,000 HOURS. THE BOTTOM BEARING SHALL BE TWO ROW, DOUBLE SHIELDED, C3, DEEP GROOVE TYPE BALL BEARING. THE TOP BEARING SHALL BE SINGLE ROW, DOUBLE SHIELDED, C3, DEEP GROOVE TYPE BALL BEARING. MOTOR HOUSING AND BEARING HOUSING SHALL BE GRAY CAST IRON, ASTM A48 CLASS 30. MOTORS SHALL BE SUITABLE VARIABLE SPEED APPLICATIONS, UTILIZING A PROPERLY SIZED VARIABLE FREQUENCY DRIVE. 4 POWER CABLE AND CABLE ENTRANCE THE PUMP POWER CABLE SHALL BE SUITABLE FOR SUBMERSIBLE PUMP APPLICATIONS. THE CABLE ENTRANCE SHALL INCORPORATE BUILT IN STRAIN RELIEF, A ONE PIECE, THREE WAY MECHANICAL COMPRESSION SEAL WITH A FATIGUE REDUCING CABLE BOOT. THE CABLE ENTRANCE ASSEMBLY SHALL CONTAIN AN ANTI-WICKING BLOCK TO ELIMINATE WATER INCURSION INTO THE MOTOR DUE TO CAPILLARY WICKING SHOULD THE POWER CABLE BE ACCIDENTALLY DAMAGED.
10	2	TSURUMI TOS50C2.75 LIFT STATION TRANSFER CHOPPER PUMP AND SLIDE RAIL SYSTEM 1. MATERIALS OF CONSTRUCTION CONSTRUCTION OF MAJOR PARTS OF THE PUMPING UNIT(S) INCLUDING PUMP CASING, IMPELLER, AND DISCHARGE ELBOW SHALL BE MANUFACTURED FROM GRAY CAST IRON, ASTM A48 CLASS 30B. UNIT(S) SHALL HAVE A FIELD ADJUSTABLE AND OR REPLACEABLE, HIGH CHROME CAST IRON CUTTER PLATE. INTERNAL AND EXTERNAL SURFACES COMING INTO CONTACT WITH THE PUMPAGE SHALL BE PROTECTED BY A FUSED POLYMER COATING. ALL EXPOSED FASTENERS SHALL BE STAINLESS STEEL. ALL UNITS SHALL BE FURNISHED WITH A DISCHARGE ELBOW WITH 150 LB. (10 KG/CM2) FLAT FACE FLANGE AND NPT COMPANION FLANGE. IMPELLERS SHALL BE OF THE SINGLE OR TWO-VANE, SEMI-OPEN, SOLIDS HANDLING DESIGN EQUIPPED WITH TUNGSTEN CARBIDE VANE TIP AND SHALL BE SLIP FIT TO THE SHAFT AND KEY DRIVEN. THE PUMP CASING SHALL INCORPORATE AN AIR RELIEF VALVE. 2 MECHANICAL SEAL . ALL UNITS SHALL BE FURNISHED WITH A DUAL INSIDE MECHANICAL SHAFT SEAL LOCATED COMPLETELY OUT OF THE PUMPAGE, RUNNING IN A SEPARATE OIL FILLED CHAMBER AND FURTHER PROTECTED BY AN EXCLUSIONARY OIL SEAL LOCATED BETWEEN THE BOTTOM SEAL FACES AND THE FLUID BEING PUMPED. UNIT 2 HP. AND ABOVE SHALL BE FITTED WITH A DEVICE THAT SHALL PROVIDE POSITIVE LUBRICATION OF TOP MECHANICAL SEAL, (DOWN TO ONE THIRD OF THE STANDARD OIL LEVEL). THE DEVICE SHALL NOT CONSUME ANY ADDITIONAL ELECTRICAL POWER. MECHANICAL SEALS SHALL RATED TO PRECLUDE THE INCURSION OF WATER UP TO 42.6 PSI. (98.4 FT.). UNITS SHALL HAVE SILICON CARBIDE MECHANICAL SEAL FACES. MECHANICAL SEAL HARDWARE SHALL BE STAINLESS STEEL. UNITS DESIGNED TO EXCEED 42.6 PSI. AT SHUT OFF HEAD SHALL INCORPORATE SEAL PRESSURE RELIEF PORTS. 3 MOTOR THE PUMP MOTOR(S) SHALL BE 1 HP, 460 V., 60 HZ., 3 PHASE AND SHALL BE NEMA MG-1, DESIGN TYPE B EQUIVALENT. MOTOR(S) SHALL HAVE A 1.15 SERVICE FACTOR AND SHALL BE RATED FOR 20 STARTS PER HOUR. MOTOR(S) SHALL BE AIR FILLED, COPPER WOUND, CLASS E, B, OR F INSULATED WITH BUILT IN THERMAL PROTECTION FOR EACH WINDING. MOTOR SHAFT SHALL BE 420 OR 403 STAINLESS STEEL AND SHALL BE SUPPORTED BY TWO PERMANENTLY LUBRICATED, HIGH TEMPERATURE BALL BEARINGS, WITH A B-10 LIFE RATING AT BEST EFFICIENCY POINT OF 60,000 HOURS. ON UNITS UP TO 10 HP. (7.5 KW), THE BOTTOM BEARING SHALL BE SINGLE ROW, DOUBLE SHIELDED, C3, DEEP GROOVE TYPE BALL BEARINGS. ON UNITS 15 HP. (11 KW) AND ABOVE, THE BOTTOM BEARING SHALL BE TWO ROW, DOUBLE SHIELDED, C3, DEEP GROOVE TYPE BALL BEARINGS. THE TOP BEARING ON ALL UNITS SHALL BE SINGLE ROW, DOUBLE SHIELDED, C3, DEEP GROOVE TYPE BALL BEARINGS. MOTOR HOUSING AND BEARING HOUSING SHALL BE GRAY CAST IRON, ASTM A48 CLASS 25B OR 30B(7.5 HP. AND ABOVE). MOTORS SHALL BE D.O.L. OR STAR-DELTA START (15 HP. AND ABOVE), AND SHALL BE SUITABLE FOR ACROSS THE LINE START OR VARIABLE SPEED APPLICATIONS, UTILIZING A PROPERLY SIZED VARIABLE FREQUENCY DRIVE. 4 POWER CABLE AND CABLE ENTRANCE ALL UNITS SHALL BE FURNISHED WITH A DUAL INSIDE MECHANICAL SHAFT SEAL LOCATED COMPLETELY OUT OF THE PUMPAGE, RUNNING IN A SEPARATE OIL FILLED CHAMBER AND FURTHER PROTECTED BY AN EXCLUSIONARY OIL SEAL LOCATED BETWEEN THE BOTTOM SEAL FACES AND THE FLUID BEING PUMPED. UNIT 2 HP. AND ABOVE SHALL BE FITTED WITH A DEVICE THAT SHALL PROVIDE POSITIVE LUBRICATION OF TOP MECHANICAL SEAL, (DOWN TO ONE THIRD OF THE STANDARD OIL LEVEL). THE DEVICE SHALL NOT CONSUME ANY ADDITIONAL ELECTRICAL POWER. MECHANICAL SEALS SHALL RATED TO PRECLUDE THE INCURSION OF WATER UP TO 42.6 PSI. (98.4 FT.). UNITS SHALL HAVE SILICON CARBIDE MECHANICAL SEAL FACES. MECHANICAL SEAL HARDWARE SHALL BE STAINLESS STEEL. UNITS DESIGNED TO EXCEED 42.6 PSI. AT SHUT OFF HEAD SHALL INCORPORATE SEAL PRESSURE RELIEF PORTS.

COMMENTS:

BOUNDARY LINES. . . . . WERE ESTABLISHED FROM RECOVERED CITY, COUNTY AND/OR PRIVATE SURVEY MONUMENTS. SEE PSOMAS MAP "BOUNDARY SURVEY" JOB NO. 1SAN080102 TASK 100, 116 FOR BOUNDARY ESTABLISHMENT.

LEGAL DESCRIPTION . . . . . SEE PSOMAS MAP "BOUNDARY SURVEY" JOB NO. 1SAN080102 TASK 100, 116 FOR LEGAL DESCRIPTION.

TITLE REPORT . . . . . FIRST AMERICAN TITLE COMPANY PRELIMINARY TITLE REPORT NO. 3029743 (60), DATED SEPTEMBER 18, 2009.

EASEMENTS . . . . . NOT SHOWN ON THIS SURVEY. SEE PSOMAS MAP "AERIAL TOPOGRAPHIC SURVEY, UTILITY LOCATIONS AND EASEMENT EXHIBIT", JOB NO. 1SAN080102 TASK 100 FOR EASEMENTS.

HORIZONTAL CONTROL . . . . . STATE PLANE COORDINATES, CALIFORNIA COORDINATE SYSTEM ZONE 5 BASED ON NAD83 (CORS96) (EPOCH: 2002.0000) REFERENCE FRAME. THE HORIZONTAL COORDINATE VALUES SHOWN HEREON ARE BASED UPON LOCAL CONTROL POINTS AND DERIVED FROM THE GPS STATIC OBSERVATIONS THAT WERE POST-PROCESSED USING ON-LINE POSITIONING USER SERVICE (OPUS) PROVIDED BY THE US NATIONAL GEODETIC SURVEY.

VERTICAL CONTROL . . . . . VERTICAL VALUES ARE BASED UPON NORTH AMERICAN VERTICAL DATUM OF 1988 USING THE FOLLOWING US NATIONAL GEODETIC SURVEY BENCHMARKS: EW4180, EW1593, EW6821, EW4188, EW4106, EW4113, EW4205, EW4212, AE1725, AE1722. SEE SHEET 1 OF SEE PSOMAS MAP "AERIAL TOPOGRAPHIC SURVEY, UTILITY LOCATIONS AND EASEMENT EXHIBIT", JOB NO. 1SAN080102 TASK 100 FOR THE BENCHMARK DESCRIPTION.

TOPOGRAPHY . . . . . BY GROUND SURVEY METHODS AND COMPLIES WITH NATIONAL MAP ACCURACY STANDARDS.

UTILITIES . . . . . VISIBLE SIGNS OF UNDERGROUND UTILITIES ARE BASED ON DATA COLLECTED BY THE FIELD CREW.

SURVEYOR'S NOTES

THIS SURVEY HAS BEEN PREPARED FOR DESIGN PURPOSES OVER LIMITED AREAS OF THE SCHOOL CAMPUS

1. BEFORE USING THIS MAP FOR DESIGN OR CONSTRUCTION PURPOSES, ALL EASEMENTS OF RECORD AND SETBACK LINES DEFINED IN COVENANTS, CONDITIONS AND RESTRICTIONS OF RECORD AFFECTING THIS PROPERTY SHOULD BE PLOTTED ON THIS MAP FROM A CURRENT TITLE REPORT. IF NO TITLE REPORT WAS FURNISHED, OUR CLIENT IS URGED TO FURNISH A CURRENT TITLE REPORT SO THAT THESE EASEMENT AND SETBACK LINES OF RECORD CAN BE PLOTTED ON THIS MAP.
2. THIS MAP SHOULD BE EXPANDED TO MEET ALTA REQUIREMENTS IF FINANCING IS TO BE OBTAINED FOR THE PROJECT, REQUIRING AN EXTENDED COVERAGE POLICY OF TITLE INSURANCE.
3. THIS SURVEY DOES NOT INCLUDE EASEMENTS EXCEPT THOSE SPECIFICALLY DELINEATED HEREON.
4. IF UNDERGROUND PUBLIC UTILITIES AND OTHER SUBSTRUCTURES, ZONES, SET BACK AND STREET WIDENING DATA ARE SHOWN HEREON, IT IS FOR INFORMATION ONLY, HAVING BEEN OBTAINED FROM A GENERAL REQUEST AT THE LOCAL AGENCY'S PUBLIC COUNTER AND/OR OTHER SOURCES NOT CONNECTED WITH THIS COMPANY. NO REPRESENTATION IS MADE AS TO THE ACCURACY, CURRENCY OR COMPLETENESS OF SAID INFORMATION AND ANY USERS OF SAID INFORMATION IS URGED TO CONTACT THE UTILITY OR LOCAL AGENCY DIRECTLY.

PAINT MARKS: (DEPTHS)

- SS PMRK (Dn =XX.XX' VARIES) . . . . . SANITARY SEWER
- SD PMRK (Dn =XX.XX' VARIES) . . . . . STORM DRAIN
- W PMRK (Dn =XX.XX' VARIES) . . . . . WATER LINE
- G PMRK (Dn =XX.XX' VARIES) . . . . . GAS LINE
- E PMRK (Dn =XX.XX' VARIES) . . . . . ELECTRICAL LINE
- C PMRK (Dn =XX.XX' VARIES) . . . . . COMMUNICATION LINE
- U PMRK (Dn =XX.XX' VARIES) . . . . . UNKNOWN UTILITY LINE
- Dn . . . . . DEPTH (PER GROUND PENETRATION RADAR)
- XXX.X . . . . . SURFACE GRADE

* DEPTHS ARE MEASURED FROM SURFACE GRADE TO TOP OF UNDERGROUND UTILITY PIPE.

AERIAL TOPOGRAPHIC SURVEY FOR:
SANTA MONICA - MALIBU UNIFIED SCHOOL DISTRICT
MALIBU HIGH SCHOOL
IN THE CITY OF MALIBU COUNTY OF LOS ANGELES STATE OF CALIFORNIA

DATE: MAY 25, 2024
SCALE: 1" = 40'
PROJECT NUMBER: 1SAN080143
SHEET 12 OF 12

COMMENTS:

BOUNDARY LINES . . . . . WERE ESTABLISHED FROM RECOVERED CITY, COUNTY AND/OR PRIVATE SURVEY MONUMENTS. SEE PSOMAS MAP "BOUNDARY SURVEY" JOB NO. 1SAN080102 TASK 100, 116 FOR BOUNDARY ESTABLISHMENT.

LEGAL DESCRIPTION . . . . . SEE PSOMAS MAP "BOUNDARY SURVEY" JOB NO. 1SAN080102 TASK 100, 116 FOR LEGAL DESCRIPTION.

TITLE REPORT . . . . . FIRST AMERICAN TITLE COMPANY PRELIMINARY TITLE REPORT NO. 3029743 (60), DATED SEPTEMBER 18, 2009.

EASEMENTS . . . . . NOT SHOWN ON THIS SURVEY. SEE PSOMAS MAP "AERIAL TOPOGRAPHIC SURVEY, UTILITY LOCATIONS AND EASEMENT EXHIBIT", JOB NO. 1SAN080102 TASK 100 FOR EASEMENTS.

HORIZONTAL CONTROL . . . . STATE PLANE COORDINATES, CALIFORNIA COORDINATE SYSTEM ZONE 5 BASED ON NAD83 (CORS96) (EPOCH: 2002.0000) REFERENCE FRAME. THE HORIZONTAL COORDINATE VALUES SHOWN HEREON ARE BASED UPON LOCAL CONTROL POINTS AND DERIVED FROM THE GPS STATIC OBSERVATIONS THAT WERE POST-PROCESSED USING ON-LINE POSITIONING USER SERVICE (OPUS) PROVIDED BY THE US NATIONAL GEODETIC SURVEY.

VERTICAL CONTROL . . . . . VERTICAL VALUES ARE BASED UPON NORTH AMERICAN VERTICAL DATUM OF 1988 USING THE FOLLOWING US NATIONAL GEODETIC SURVEY BENCHMARKS: EW4180, EW1593, EW6821, EW4188, EW4106, EW4113, EW4205, EW4212, AE1725, AE1722. SEE SHEET 1 OF SEE PSOMAS MAP "AERIAL TOPOGRAPHIC SURVEY, UTILITY LOCATIONS AND EASEMENT EXHIBIT". JOB NO. 1SAN080102 TASK 100 FOR THE BENCHMARK DESCRIPTION.

TOPOGRAPHY . . . . . BY GROUND SURVEY METHODS AND COMPLIES WITH NATIONAL MAP ACCURACY STANDARDS.

CONTOUR INTERVAL . . . . . 1 FOOT

UTILITIES . . . . . VISIBLE SIGNS OF UNDERGROUND UTILITIES ARE BASED ON DATA COLLECTED BY THE FIELD CREW.

CONTROL NOTES:

HORIZONTAL CONTROL :

STATE PLANE COORDINATES, CALIFORNIA COORDINATE SYSTEM ZONE 5 BASED ON NAD83(CORS96) EPOCH 2002.00. POSITIONAL VALUES SHOWN HEREON ARE BASED UPON LOCAL CONTROL POINTS AND DERIVED FROM THE GPS STATIC OBSERVATIONS UTILIZING DATA FROM SOUTHERN CALIFORNIA INTEGRATED GPS NETWORK (SCIGN) CONTINUOUSLY OPERATING REFERENCE STATIONS (CORS).

CSN1	34-15-12.762904	118-31-25.669137
WRHS	33-57-29.329617	118-25-39.330869
FMTP	34-24-35.494318	118-53-38.861402

VERTICAL CONTROL :

VERTICAL VALUES SHOWN HEREON ARE BASED UPON NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88) UTILIZING COUNTY OF LOS ANGELES BENCHMARKS LISTED BELOW.

BENCHMARK NO: DY 11712, MALIBU QUAD

DESCRIPTION: LACO BM TAG IN NW COR C B SM W/O C/L DRWY TO HSE #30065 PACIFIC COAST HWY & 12.5M N/O CL

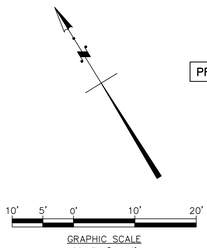
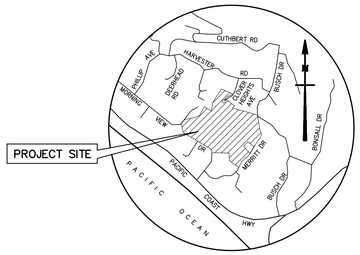
ELEVATION: 20.440 FEET (ADJUSTED IN 2003)



SURVEYOR'S NOTES

THIS SURVEY HAS BEEN PREPARED FOR DESIGN PURPOSES OVER LIMITED AREAS OF THE SCHOOL CAMPUS



1. BEFORE USING THIS MAP FOR DESIGN OR CONSTRUCTION PURPOSES, ALL EASEMENTS OF RECORD AND SETBACK LINES DEFINED IN COVENANTS, CONDITIONS AND RESTRICTIONS OF RECORD AFFECTING THIS PROPERTY SHOULD BE PLOTTED ON THIS MAP FROM A CURRENT TITLE REPORT. IF NO TITLE REPORT WAS FURNISHED, OUR CLIENT IS URGED TO FURNISH A CURRENT TITLE REPORT SO THAT THESE EASEMENT AND SETBACK LINES OF RECORD CAN BE PLOTTED ON THIS MAP.
2. THIS MAP SHOULD BE EXPANDED TO MEET ALTA REQUIREMENTS IF FINANCING IS TO BE OBTAINED FOR THE PROJECT, REQUIRING AN EXTENDED COVERAGE POLICY OF TITLE INSURANCE.
3. THIS SURVEY DOES NOT INCLUDE EASEMENTS EXCEPT THOSE SPECIFICALLY DELINEATED HEREON.
4. IF UNDERGROUND PUBLIC UTILITIES AND OTHER SUBSTRUCTURES, ZONES, SET BACK AND STREET WIDENING DATA ARE SHOWN HEREON, IT IS FOR INFORMATION ONLY, HAVING BEEN OBTAINED FROM A GENERAL REQUEST AT THE LOCAL AGENCY'S PUBLIC COUNTER AND/OR OTHER SOURCES NOT CONNECTED WITH THIS COMPANY. NO REPRESENTATION IS MADE AS TO THE ACCURACY, CURRENCY OR COMPLETENESS OF SAID INFORMATION AND ANY USERS OF SAID INFORMATION IS URGED TO CONTACT THE UTILITY OR LOCAL AGENCY DIRECTLY.

PLANTING NOTES

1. REFER TO CIVIL ENGINEER'S DRAWINGS FOR UTILITY LOCATIONS, TREE SUBDRAINAGE STUBOUTS, (IF REQUIRED), AND FINAL GRADING. IF ACTUAL SITE CONDITIONS VARY FROM WHAT IS SHOWN ON THE LANDSCAPE ARCHITECT'S DRAWINGS, THE CONTRACTOR SHALL CONTACT THE OWNER'S AUTHORIZED REPRESENTATIVE AND LANDSCAPE ARCHITECT FOR DIRECTION AS TO HOW TO PROCEED.
2. VERIFY LOCATIONS OF ALL PERTINENT EXISTING AND PROPOSED SITE IMPROVEMENTS. IF ANY PART OF THIS PLAN CANNOT BE FOLLOWED DUE TO SITE CONDITIONS, CONTACT THE LANDSCAPE ARCHITECT FOR INSTRUCTION PRIOR TO COMMENCING WORK.
3. EXACT LOCATIONS OF PLANT MATERIALS SHALL BE REVIEWED BY THE LANDSCAPE ARCHITECT IN THE FIELD PRIOR TO INSTALLATION. LANDSCAPE ARCHITECT RESERVES THE RIGHT TO ADJUST PLANTS TO EXACT LOCATION IN FIELD.
4. CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING ALL PLANT COUNTS AND SQUARE FOOTAGES. QUANTITIES SHOWN ON PLANS TAKE PRECEDENCE OVER WRITTEN QUANTITIES IN "PLANTING LEGEND."
5. PROVIDE MATCHING FORMS AND SIZES FOR ALL PLANT MATERIALS WITHIN EACH SPECIES AND SIZE DESIGNATED ON THE DRAWINGS.
6. PRUNE NEWLY PLANTED TREES ONLY AS DIRECTED BY LANDSCAPE ARCHITECT.
7. ALIGNED AND EQUALLY SPACED, IN ALL DIRECTIONS, ALL SHRUBS TO BE AS DESIGNATED PER THESE NOTES AND DRAWINGS.
8. ALL TREES IN ROWS TO BE ALIGNED. (UNLESS NOTED OTHERWISE ON PLANS)
9. TREES SHALL BEAR SAME RELATION TO FINISH GRADE AS AT PLACE OF GROWTH.
10. FINISH GRADES OF ALL TURF AREAS SHALL BE (1") BELOW ADJACENT CURB OR PAVEMENT. FINISH GRADES OF ALL SHRUB AREAS SHALL BE (2-1/2") BELOW ADJACENT CURB, PAVEMENT OR HEADER.
11. CONTRACTOR SHALL SUBMIT FOR APPROVAL COLOR PHOTOS OF ALL TREES, SHRUBS, AND GROUNDCOVER. PHOTOS SHOULD INCLUDE A PERSON FOR SCALE PURPOSES, PHOTOS SHALL BE OF THE ACTUAL PLANT MATERIAL TO BE USED ON THE PROJECT. ALL PLANT MATERIAL SHALL BE OF A QUALITY AS DETERMINED BY THE LANDSCAPE ARCHITECT. MATERIAL FOUND UNSUITABLE FOR THE DESIGN OR SPECIFICATION INTENT WILL BE REJECTED.
12. PROVIDE A (3") LAYER OF MULCH AT PROPOSED TREE, SHRUB, AND GROUNDCOVER PLANTING AREAS, EXCEPT AREAS WITH JUTE MESHING.
13. CONTRACTOR SHALL CONDUCT AGRICULTURAL SUITABILITY AND FERTILITY SOILS TESTING PER SOIL PREPARATION SPECIFICATION. ANALYSIS SHALL INCLUDE RECOMMENDATIONS FOR SOIL PREPARATION AND BACKFILL MIX AS WELL AS RECOMMENDATIONS FOR POST MAINTENANCE FERTILIZATION. SUBMIT SOILS ANALYSES AND SAMPLES OF AMENDMENTS TO LANDSCAPE ARCHITECT FOR REVIEW PRIOR TO SOIL PREPARATION.
14. QUANTITIES LISTED ON PLANT LEGEND ARE PER SHEET. CONTRACTOR MUST VERIFY QUANTITIES GIVEN ON THE PLANS WITH ACTUAL QUANTITIES SHOWN.
15. PROVIDE ROOT BARRIERS IN ADDITION TO THOSE INDICATED ON THE PLANS FOR ALL TREES WITHIN 5' OF ANY HARDSCAPE.
16. NOT INSTALL WATERING BASINS AROUND TREES WHEN PLANTED IN TURF. PROVIDE A CIRCULAR TURF-FREE ZONE TO OUTSIDE EDGE OF ROOTBALL. PLACE ONLY 2-INCHES OF WOOD MULCH IN THIS AREA AND NO CLOSER THAN 4-INCHES FROM TRUNK.
17. PLANT ALL TREES A MIN. OF 5' FROM ANY UTILITIES. THE LANDSCAPE CONTRACTOR SHALL VERIFY THE LOCATION OF ALL UTILITIES PRIOR TO COMMENCING WORK.
18. TREES ARE TO BE A MINIMUM OF 5' AWAY FROM ANY HARDSCAPE SUCH AS CURBS, WALKS, ETC.
19. LANDSCAPE MAINTENANCE PERIOD IS 90 DAYS.
20. REFER TO SPECIFICATIONS FOR ADDITIONAL INFORMATION.

FUEL MODIFICATION PLAN NOTES

ZONE A - SETBACK ZONE

- EXTENDS 30 FEET BEYOND THE EDGE OF ANY COMBUSTIBLE STRUCTURE, ACCESSORY STRUCTURE, APPENDAGE, OR PROJECTION.
- OVERHANGS OR PARTS OF STRUCTURES NOT ACCURATELY REFLECTED IN THE PLANS MAY DENY THE APPROVAL OF THE PLANT LOCATION ON THE APPROVED PLAN.
- IRRIGATION BY AUTOMATIC OR MANUAL SYSTEMS SHALL BE PROVIDED TO MAINTAIN HEALTHY VEGETATION AND FIRE RESISTANCE.
- VEGETATION IN THIS ZONE SHALL CONSIST PRIMARILY OF GREEN LAWNS, GROUND COVERS NOT EXCEEDING 6 INCHES IN HEIGHT, AND ADEQUATELY SPACED SHRUBS. THE OVERALL LANDSCAPE CHARACTERISTICS SHALL PROVIDE ADEQUATE DEFENSIBLE SPACE IN A FIRE ENVIRONMENT
- PLANTS IN ZONE A SHOULD BE INHERENTLY HIGHLY FIRE-RESISTANT AND APPROPRIATELY SPACED. SPECIES SELECTION SHOULD REFERENCE THE FUEL MODIFICATION PLANT LIST. OTHER SPECIES MAY BE USED AND SUBJECT TO APPROVAL. PLANS RESUBMITTED 6 MONTHS AFTER THE INITIAL REVIEW WILL BE EVALUATED BASED ON THE CURRENT FUEL MODIFICATION PLANT LIST, AVAILABLE FROM THE FUEL MODIFICATION UNIT.
- TREES ARE GENERALLY NOT RECOMMENDED, EXCEPT FOR DWARF VARIETIES OR MATURE TREES OF SMALL STATURE.
- TARGET SPECIES WILL TYPICALLY NOT BE ALLOWED WITHIN 30 FEET OF FUEL STRUCTURES AND MAY REQUIRE REMOVAL IF EXISTING
- VINES AND CLIMBING PLANTS SHOULD NOT BE ALLOWED ON ANY COMBUSTIBLE STRUCTURE REQUIRING REVIEW.

ZONE B - IRRIGATED ZONE

- EXTENDS FROM THE OUTER EDGE OF ZONE A TO 100 FEET FROM STRUCTURES.
- IRRIGATION BY AUTOMATIC OR MANUAL SYSTEMS SHOULD BE PROVIDED TO MAINTAIN HEALTHY VEGETATION AND FIRE RESISTANCE.
- VEGETATION IN THIS ZONE SHOULD PRIMARILY CONSIST OF GREEN LAWNS, GROUND COVERS, AND ADEQUATELY SPACED SHRUBS AND TREES
- UNLESS OTHERWISE APPROVED, GROUND COVERS SHOULD BE MAINTAINED AT A HEIGHT NOT TO EXCEED 6 INCHES. ON SLOPES, 12 INCHES IS ACCEPTABLE WITHIN 50 FEET OF A STRUCTURE, AND 18 INCHES BEYOND 50 FEET. THE OVERALL LANDSCAPE CHARACTERISTICS SHOULD PROVIDE ADEQUATE DEFENSIBLE SPACE IN A FIRE ENVIRONMENT. SPECIMEN NATIVE PLANTS MAY BE APPROVED TO REMAIN IF PROPERLY MAINTAINED FOR ADEQUATE DEFENSIBLE SPACE. ANNUAL GRASSES OR WEEDS SHOULD BE MAINTAINED AT A HEIGHT NOT TO EXCEED 3 INCHES
- PLANTS SHOULD BE FIRE-RESISTANT AND APPROPRIATELY SPACED. PLANT SELECTION SHOULD REFERENCE THE FUEL MODIFICATION PLANT LIST. OTHER PLANTS MAY BE USED SUBJECT TO APPROVAL.
- REPLACEMENT PLANTING TO MEET MINIMUM CITY OR COUNTY SLOPE COVERAGE REQUIREMENTS OR ORDINANCES WILL BE CONSIDERED. IN ALL CASES, THE OVERALL LANDSCAPE CHARACTERISTICS SHOULD PROVIDE ADEQUATE DEFENSIBLE SPACE IN A FIRE ENVIRONMENT.
- TARGET SPECIES MAY REQUIRE REMOVAL WITHIN 50 FEET OF STRUCTURES, DEPENDING ON SITE CONDITIONS
- ALL TREES, UNLESS OTHERWISE APPROVED, SHOULD BE PLANTED FAR ENOUGH FROM STRUCTURES AND FIRE ACCESS ROADS, SO AS NOT TO OVERHANG ANY STRUCTURE OR ACCESS AT MATURITY

ZONE B - EXTENDED IRRIGATED ZONE

- EXTENDS FROM THE OUTER EDGE OF ZONE B UP TO 200 FEET FROM STRUCTURES OR TO THE PROPERTY LINE.
- REQUIRED THINNING AND CLEARANCE WILL BE DETERMINED UPON INSPECTION.
- IRRIGATION SYSTEMS ARE NOT REQUIRED.
- VEGETATION MAY CONSIST OF MODIFIED EXISTING NATIVE PLANTS, ADEQUATELY SPACED ORNAMENTAL SHRUBS AND TREES, OR BOTH. REPLACEMENT PLANTING TO MEET MINIMUM CITY OR COUNTY SLOPE COVER REQUIREMENTS OR ORDINANCES WILL BE CONSIDERED. IN ALL CASES, THE OVERALL LANDSCAPE CHARACTERISTICS SHALL PROVIDE ADEQUATE DEFENSIBLE SPACE IN A FIRE ENVIRONMENT
- PLANTS SHOULD BE SPACED APPROPRIATELY. EXISTING NATIVE VEGETATION SHOULD BE MODIFIED BY THINNING AND REMOVING PLANTS CONSTITUTING A FIRE RISK, THESE INCLUDE, BUT ARE NOT LIMITED TO: CHAMFER, SAGE, SAGE BRUSH, AND BUCKWHEAT.
- ANNUAL GRASSES AND WEEDS SHOULD BE MAINTAINED AT A HEIGHT NOT TO EXCEED 3 INCHES.
- GENERAL SPACING FOR EXISTING NATIVE SHRUBS OR GROUPS OF SHRUBS IS 15 FEET BETWEEN CANOPIES. NATIVE PLANTS MAY BE THINNED BY REDUCED LEVELS AS THE DISTANCE FROM DEVELOPMENT INCREASES
- GENERAL SPACING FOR EXISTING NATIVE TREES OR GROUPS OF TREES IS 30 FEET BETWEEN CANOPIES. THIS DISTANCE MAY VARY DEPENDING ON THE SLOPE, THE ARRANGEMENT OF TREES IN RELATION TO THE SLOPE, AND THE TREE SPECIES.

FIRE ACCESS ROAD ZONE

- EXTENDS A MINIMUM OF 10 FEET FROM THE EDGE OF ANY PUBLIC OR PRIVATE ROAD USED BY FIREFIGHTING RESOURCES.
- CLEAR AND REMOVE FLAMMABLE GROWTH FOR A MINIMUM OF 10 FEET ON EACH SIDE OF FIRE ACCESS ROADS. (FIRE CODE 325.10)
- ADDITIONAL CLEARANCE BEYOND 10 FEET MAY BE REQUIRED UPON INSPECTION
- FIRE ACCESS ROADS, DRIVEWAYS, AND TURNAROUNDS MUST BE MAINTAINED IN ACCORDANCE WITH THE FIRE CODE. FIRE ACCESS ROADS MUST HAVE UNOBSTRUCTED VERTICAL CLEARANCE CLEAR TO THE SKY FOR A WIDTH OF 20 FEET. (FIRE CODE 503.2.1)
- REMAINING PLANTS MUST BE APPROPRIATELY SPACED AND MAINTAINED TO PROVIDE SAFE EGRESS IN WILDLIFE FIRE ENVIRONMENTS.
- ALL TREES, UNLESS OTHERWISE APPROVED, MUST BE PLANTED FAR ENOUGH FROM STRUCTURES AND FIRE ACCESS ROADS, SO AS NOT TO OVERHANG ANY STRUCTURE OR ACCESS AT MATURITY.

MAINTENANCE

- ROUTINE MAINTENANCE SHOULD BE REGULARLY PERFORMED IN ALL AREAS. REQUIREMENTS INCLUDE ITEMS IN THE FUEL MODIFICATION GUIDELINES AND THOSE OUTLINED BELOW:
- REMOVAL OR THINNING OF UNDESIRABLE FUEL VEGETATION AND REMOVAL OF DEAD OR DYING PLANTS TO MEET MINIMUM BRUSH CLEARANCE REQUIREMENTS.
- PRUNING AND THINNING TO REDUCE THE OVERALL FUEL LOAD AND CONTINUITY OF FUELS
- FUEL LOADS SHOULD BE REDUCED BY PRUNING LOWER BRANCHES OF TREES AND TREE-FORM SHRUBS TO 1/3 OF THEIR HEIGHT, OR 6 FEET FROM THE LOWEST HANGING BRANCHES TO THE GROUND, TO HELP PREVENT FIRE FROM SPREADING AND MAKE MAINTENANCE EASIER. TREES WITH UNDERGROUND PLANTS SHOULD BE PRUNED AT LEAST THREE TIMES THE HEIGHT OF THE UNDERGROUND VEGETATION OR UP TO ONE THIRD THE HEIGHT OF THE TREE, WHICHEVER IS LESS, TO HELP PREVENT FIRE FROM SPREADING UPWARD INTO THE CROWN
- ACCUMULATED PLANT LITTER AND DEAD WOOD SHOULD BE REMOVED. DEBRIS AND TRIMMINGS PRODUCED BY MAINTENANCE SHOULD BE REMOVED FROM THE SITE OR CHIPPED AND EVENLY DISPERSED IN THE SAME AREA TO A MAXIMUM DEPTH OF 6 INCHES.
- ALL INVASIVE SPECIES AND THEIR PARTS SHOULD BE REMOVED FROM THE SITE.
- MANUAL AND AUTOMATIC IRRIGATION SYSTEMS SHOULD BE MAINTAINED FOR OPERATIONAL INTEGRITY AND PROGRAMMING.
- EFFECTIVENESS SHOULD BE REGULARLY EVALUATED TO AVOID OVER- OR UNDERWATERING
- COMPLIANCE WITH THE FIRE CODE IS A YEAR-ROUND RESPONSIBILITY. ENFORCEMENT WILL OCCUR FOLLOWING INSPECTION BY THE FIRE DEPARTMENT. ANNUAL INSPECTIONS FOR BRUSH CLEARANCE CODE REQUIREMENTS ARE CONDUCTED FOLLOWING THE NATURAL DRYING OF GRASSES AND FINE FUELS, BETWEEN THE MONTHS OF APRIL AND JUNE, DEPENDING ON THE GEOGRAPHIC REGION. INSPECTION FOR COMPLIANCE WITH AN APPROVED FUEL MODIFICATION PLAN MAY OCCUR AT ANY TIME OF YEAR.
- BRUSH CLEARANCE ENFORCEMENT ISSUES ON ADJACENT PROPERTIES SHOULD BE DIRECTED TO THE COUNTY OF LOS ANGELES FIRE DEPARTMENT'S BRUSH CLEARANCE UNIT AT (626) 969-2375
- ALL FUTURE PLANTINGS MUST BE IN ACCORDANCE WITH THE COUNTY OF LOS ANGELES FIRE DEPARTMENT'S FUEL MODIFICATION GUIDELINES AND APPROVED PRIOR TO INSTALLATION. CHANGES TO THE APPROVED PLAN, WHICH REQUIRE AN ADDITIONAL PLAN REVIEW, WILL INCUR A PLAN REVIEW FEE.
- QUESTIONS REGARDING LANDSCAPING, PLANTING, AND MAINTENANCE WITH REGARD TO FIRE SAFETY SHOULD BE DIRECTED TO THE FIRE DEPARTMENT'S FUEL MODIFICATION UNIT AT (626) 969-5205

MATERIALS AND LAYOUT ENLARGEMENT PLAN

2-L3.02

EXISTING IRRIGATION NOTES

NOTE 1:
CONTRACTOR SHALL MAINTAIN EXISTING MAINLINES IN WORKING ORDER. COORDINATE ALL INTERRUPTIONS OF OPERATION OF THE EXISTING IRRIGATION TO A MINIMUM. COORDINATE ALL INTERRUPTIONS WITH THE OWNER'S REPRESENTATIVE.

NOTE 2:
CONTRACTOR SHALL BE RESPONSIBLE FOR ALL EXISTING IRRIGATION EQUIPMENT DAMAGED DURING CONSTRUCTION AND IF DAMAGED, SHALL REPLACE WITH SAME MANUFACTURER AND MODEL.

NOTE 3:
ANY EXISTING IRRIGATION CONTROL VALVES CONNECTED TO EXISTING CONTROLLER SHALL BE RECONNECTED TO EXISTING CONTROLLER. CONFIRM PROPER CONTROLLER OPERATION AND INSTALLATION WITH OWNER'S AUTHORIZED REPRESENTATIVE PRIOR TO STARTING WORK AND UPON COMPLETION OF WORK.

NOTE 4:
CONTRACTOR SHALL CONFIRM THE EXISTING CONTROLLER MAKE AND MODEL AND SHALL CONFIRM THAT SAID CONTROLLER HAS ADEQUATE OPEN STATIONS TO OPERATE ANY ADJUSTED AND ALL PROPOSED IRRIGATION SYSTEM MODIFICATIONS. NOTIFY OWNER'S AUTHORIZED REPRESENTATIVE SHOULD ANY DISCREPANCIES BE NOTED.

NOTE 5:
CONTRACTOR SHALL BE RESPONSIBLE FOR REPAIR/MODIFICATION/REROUTING OF ALL ADJACENT IRRIGATION SYSTEM EQUIPMENT THAT IS AFFECTED BY NEW CONSTRUCTION IMPROVEMENTS. CONTRACTOR SHALL REPAIR SAID SYSTEMS TO A LIKE NEW MANNER, PROVIDING NO LESS THAN 100% OF HEAD RADIUS COVERAGE IN ALL AREAS WITH SYSTEM LAYOUT AS APPROVED BY OWNER'S AUTHORIZED REPRESENTATIVE. CONTRACTOR SHALL CONFIRM ALL AREAS REQUIRING MODIFICATION WITH OWNER'S AUTHORIZED REPRESENTATIVE PRIOR TO BIDDING WORK AND PRIOR TO STARTING WORK.

NOTE 6:
CONTRACTOR SHALL BE RESPONSIBLE FOR THE COMPLETE REMOVAL AND DISPOSAL OF ALL EXISTING IRRIGATION EQUIPMENT AFFECTED BY THE NEW CONSTRUCTION IMPROVEMENTS, IF NECESSARY. CONTRACTOR SHALL VERIFY ALL EQUIPMENT TO BE REMOVED AND DISPOSED OF IN FIELD PRIOR TO BIDDING WORK AND PRIOR TO STARTING WORK.

NOTE 7:
CONTRACTOR SHALL FIELD VERIFY DEPTH AND LOCATION OF ALL EXISTING UTILITIES PRIOR TO BIDDING WORK AND AGAIN PRIOR TO STARTING WORK. VERIFICATION SHALL BE DOCUMENTED AND DELIVERED TO OWNER'S REPRESENTATIVE.

NOTE 8:
CONTRACTOR SHALL BE RESPONSIBLE FOR THE PLACEMENT OF ALL SCH 40 PVC SLEEVING UNDER PAVING, WALLS AND CURBS AT NO LESS THAN 24" BELOW GRADE AND NO LESS THAN 2X DIAMETER OF IRRIGATION PIPE IN AREAS WHERE PIPE CROSSING WILL OCCUR. WHEN PIPE SIZE IS NOT AVAILABLE USE 6" SLEEVING MATERIAL. CONFIRM CROSSINGS WITH OWNER'S REPRESENTATIVE PRIOR TO PAVING AND HARDSCAPE CONSTRUCTION.

NOTE 9:
EXISTING IRRIGATION IN THIS AREA SHALL BE PROTECTED IN PLACE FOR CONTINUED USE. CONTRACTOR SHALL VERIFY THE EXTENT OF THE EXISTING SYSTEM AND MAKE ADJUSTMENTS TO CAP OFF OR MODIFY THE EXISTING SYSTEM TO MEET THE NEW LANDSCAPE CONDITION IF NECESSARY.

NOTE 10:
CONTRACTOR SHALL EXERCISE EXTREME CAUTION WHEN WORKING WITHIN THE DRIPLINE OF EXISTING TREES. NO MECHANICAL TRENCHING WITHIN THE DRIPLINE OF THE EXISTING TREE WILL BE ALLOWED. AIR SPADE SHALL BE UTILIZED FOR ALL TRENCHING WITHIN THE DRIPLINE OF TREES. CONTRACTOR SHALL REFER TO ARBORIST REPORT FOR ADDITIONAL PRECAUTIONS REQUIRED FOR THE EXISTING TREES. VERIFY ALL LAYOUT IN FIELD WITH OWNER'S AUTHORIZED REPRESENTATIVE.

NOTE A:
POINT OF CONNECTION (POC) #1 SHALL BE A CONNECTION TO AN EXISTING 4" DOMESTIC IRRIGATION WATER MAINLINE DOWNSTREAM OF AN EXISTING 2" IRRIGATION METER WITH A 2" SERVICE LINE. THE CONTRACTOR SHALL VERIFY THE ACTUAL LOCATION, WATER TYPE, METER SIZE AND WATER PRESSURE IN THE FIELD PRIOR TO STARTING WORK. MEASUREMENT OF THE STATIC (NO WATER MOVING) WATER PRESSURE IS ACCEPTABLE FOR POTABLE WATER SYSTEMS WHERE NO PUMP HAS BEEN INDICATED ON THESE PLANS. WHEN USING RECYCLED WATER, OR ON POTABLE WATER SYSTEMS REQUIRING A PUMP, ONLY THE MEASUREMENT OF DYNAMIC (WATER MOVING THROUGH THE METER) WATER PRESSURE, SHALL BE ACCEPTABLE. THE DYNAMIC WATER PRESSURE SHALL BE MEASURED AT THE MAXIMUM SYSTEM DEMAND AS INDICATED BELOW. IF ANY OF THE POC INFORMATION SHOWN ON THESE DRAWING IS FOUND TO BE DIFFERENT THAN THE ACTUAL POC INFORMATION GATHERED IN THE FIELD, IMMEDIATELY NOTIFY THE LANDSCAPE ARCHITECT AND IRRIGATION CONSULTANT. SHOULD THE CONTRACTOR FAIL TO VERIFY THE POC INFORMATION AS SHOWN HEREIN, ANY CHANGES REQUIRED BY LOW PRESSURE OR VOLUME SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR.

WATER PRESSURE AT POC:	145	PSI (STATIC)
DESIGN WATER PRESSURE:	77	PSI
MAXIMUM SYSTEM DEMAND:	36	GPM
RESIDUAL WATER PRESSURE:	68	PSI

NOTE B:
CONTROLLER "A" SHALL BE OF THE BRAND, MODEL AND STATION SIZE AS INDICATED ON THE IRRIGATION MATERIALS LEGEND. THE CONTROLLER SHALL BE INSTALLED IN THE APPROXIMATE LOCATION SHOWN. THE CONTRACTOR SHALL COORDINATE THE REQUIRED ELECTRICAL POWER SUPPLY AT THIS LOCATION WITH THE OWNER'S AUTHORIZED REPRESENTATIVE. FINAL LOCATION OF CONTROLLER AND ELECTRICAL POINT OF CONNECTION SHALL BE CONFIRMED WITH OWNER'S AUTHORIZED REPRESENTATIVE PRIOR TO STARTING WORK.

NOTE C:
THESE PLANS ARE DIAGRAMMATIC, THE MAINLINE AND RELATED IRRIGATION EQUIPMENT IS SHOWN WITHIN THE PAVING FOR CLARITY ONLY. THE ACTUAL LOCATION OF MAINLINE AND RELATED IRRIGATION EQUIPMENT SHALL BE WITHIN PLANTER AND A MINIMUM OF 18" OFF ADJACENT HARDSCAPE AND OTHER OBSTACLES, TYPICAL.

NOTE D:
CONTRACTOR SHALL ADJUST ALL HEADS AS REQUIRED TO ACCOMMODATE ANY VERTICAL OBSTRUCTIONS THAT MAY OCCUR IN THE LANDSCAPE, INCLUDING BUT NOT LIMITED TO LIGHT POLES, FIRE HYDRANTS, TREES, ETC. WHEN A SLIGHT RELOCATION OF THE HEAD IS NOT SUFFICIENT TO CLEAR THE OBSTACLE, OR IF IT NEGATIVELY AFFECTS THE COVERAGE, AN ADDITIONAL HEAD SHALL BE INSTALLED TO PLACE ONE HEAD ON EITHER SIDE OF THE OBSTACLE. THE NOZZLES OF THESE TWO HEADS SHALL HAVE ARC PATTERNS THAT ADD UP TO THE ORIGINAL ARC PATTERN OF THE HEAD INDICATED ON THE PLANS. THE CONTRACTOR SHALL VERIFY ALL HEAD LAYOUT WITH OWNER'S AUTHORIZED REPRESENTATIVE PRIOR TO STARTING WORK.

NOTE E:
THESE PLANS ARE DIAGRAMMATIC, TREE BUBBLERS AND LATERAL LINES ARE SHOWN WITHIN THE PAVING FOR CLARITY ONLY, THE ACTUAL LOCATIONS SHALL BE WITHIN THE PLANTER. THE TREE BUBBLERS SHALL BE AUGNED WITH TREES AS SHOWN ON THE PLANTING PLANS, AND AS DIRECTED BY OWNER'S AUTHORIZED REPRESENTATIVE. THE CONTRACTOR SHALL CONFIRM ALL LAYOUT IN FIELD WITH OWNER'S AUTHORIZED REPRESENTATIVE PRIOR TO STARTING WORK.

NOTE F:
LATERAL LINE PIPING WITHIN BUILDING SHALL BE A TYPE K COPPER AND IS SHOWN FOR CLARITY ONLY, ACTUAL DESIGN AND ROUTING SHALL BE COMPLETED BY PLUMBING ENGINEER AND INSTALLED BY PLUMBING CONTRACTOR. EACH STUB-OUT WITHIN EACH PLANTER SHALL HAVE A COPPER FEMALE ADAPTER FOR THE LANDSCAPE CONTRACTOR CONNECTION. ALL PIPING THROUGH BUILDING TO EXTERIOR AND THROUGH BUILDING TO UPPER FLOOR SHALL BE PROVIDED BY PLUMBER.

NOTE G:
PRIOR TO START OF CONSTRUCTION THE CONTRACTOR SHALL SUBMIT TO THE OWNER AND LANDSCAPE ARCHITECT A SCALED SHOP DRAWING INDICATING THE PROPOSED LOCATIONS FOR THE IRRIGATION EQUIPMENT LISTED BELOW. THE SHOP DRAWING SHALL BE PREPARED TO THE SATISFACTION OF THE OWNER AND LANDSCAPE ARCHITECT. SHOP DRAWINGS MUST INCLUDE THE PROPOSED LOCATIONS FOR THE FOLLOWING ITEMS:

1. POINT OF CONNECTION (INCLUDING WATER POC, BACK FLOW DEVICES, MASTER CONTROL VALVES, FLOW SENSORS, ETC.)
2. ISOLATION VALVES
3. AUTOMATIC CONTROL VALVES (INDICATE STATION NUMBER)
4. QUICK COUPLING VALVES
5. IRRIGATION CONTROLLER(S)
6. RELATED EQUIPMENT (AS MAY BE DIRECTED).

EACH PIECE OF AFOREMENTIONED EQUIPMENT SHALL HAVE IT'S PROPOSED INSTALLED LOCATION SHOWN ON THE SHOP DRAWINGS. THE SYMBOL FOR EACH PRODUCT SHALL BE A SCALED REPRESENTATION OF THE FOOTPRINT OF THE EQUIPMENT OR THE VALVE BOX IN WHICH THE EQUIPMENT IS INSTALLED. CONTRACTOR SHALL INSTALL ALL VALVE BOXES AND RELATED EQUIPMENT PER THE OWNER APPROVED SHOP DRAWINGS. ONCE THE SHOP DRAWING LOCATIONS ARE APPROVED, THE LANDSCAPE ARCHITECT OR OWNER'S AUTHORIZED REPRESENTATIVE WILL ALLOW NO ADJUSTMENTS TO THE APPROVED VALVE BOX PLACEMENT WITHOUT PRIOR WRITTEN ACCEPTANCE. ANY IRRIGATION EQUIPMENT INSTALLED WITHOUT PRIOR APPROVAL WITH SHOP DRAWINGS WILL BE SUBJECT TO RELOCATION BASED ON DIRECTION BY THE LANDSCAPE ARCHITECT AT THE CONTRACTOR'S EXPENSE.

WATER PRESSURE LOSS CALCULATIONS

WATER METER NUMBER	1	WATER METER SIZE (Inches)	1.00
HYDRAULIC GRADE LINE (FT)	110	WATER METER ELEVATION (FT)	110
ELEVATION DIFFERENCE (FT)	0	STATIC PRESSURE (PSI)	145.0
REMOTE CONTROL VALVE #	A1	REMOTE CONTROL VALVE SIZE (In.)	1.00
R.C.V. DEMAND (GPM)	29	TOTAL DEMAND (GPM)	29
HIGHEST HEAD SERVED (FT)	135	STATIC PRESSURE AT HIGHEST HEAD	134.2

IRRIGATION ENLARGEMENT PLAN

2-L6.03

WATER AUDIT AND MAINTENANCE SCHEDULE

THE CONTRACTOR WILL CONDUCT AN IRRIGATION AUDIT USING A CERTIFIED IRRIGATION AUDITOR, AFTER THE FINAL FIELD OBSERVATION HAS BEEN COMPLETED AND ALL IRRIGATION COMPONENTS ARE INSTALLED IN ACCORDANCE WITH THE PLANS AND SPECIFICATIONS AND THE IRRIGATION SYSTEM IS ACCEPTED BY THE PROJECT ARCHITECT FOR MAINTENANCE.

THE IRRIGATION AUDIT WILL BE CONDUCTED IN ACCORDANCE WITH THE FOLLOWING SCHEDULE:

1. PLACE FLAGS AT EACH HEAD IN THE ZONE
2. MEASURE SPACING AND MARK MID POINTS BETWEEN HEADS.
3. PLACE WATER MEASURING RECEPTACLES.
4. TAKE READINGS OF WATER LEVEL IN RECEPTACLES AND RECORD RESULTS.
5. MEASURE HEAD PRESSURE IN EACH ZONE AND RECORD RESULTS.
6. AFTER COMPLETING ZONE ADVANCE TO NEXT ZONE AND REPEAT PROCEDURE.
7. SUBMIT THE RESULTS OF THE AUDIT TO THE PROJECT ARCHITECT.

THE IRRIGATION MAINTENANCE SCHEDULE TASKS LISTED BELOW ARE INTENDED AS MINIMUM STANDARDS AND MORE FREQUENT ATTENTION MAY BE REQUIRED DEPENDING ON THE PARTICULAR SITE CONDITIONS.

MAINTENANCE TASK

1. CONTROLLER CABINET - OPEN CABINET AND CLEAN OUT DEBRIS AND REPLACE BATTERY AS NECESSARY. CHECK WIRING AND REPAIR AS NEEDED AND CHECK CLOCK AND RESET IF NECESSARY.
FREQUENCY: QUARTERLY

2. IRRIGATION SCHEDULE - ADJUST SCHEDULE FOR SEASONAL VARIATIONS AND OTHER CONDITIONS WHICH MAY AFFECT THE AMOUNT OF WATER NEEDED TO MAINTAIN PLANT HEALTH ADJUST AS NECESSARY.
FREQUENCY: MONTHLY

3. POC - VISUALLY INSPECT COMPONENTS FOR LEAKS, PRESSURE SETTINGS, SETTLEMENT OR OTHER DAMAGE AFFECTING THE OPERATION OF A COMPONENT. REPAIR AS NEEDED.
FREQUENCY: QUARTERLY

4. REMOTE CONTROL VALVES, ISOLATION VALVES AND QUICK COUPLER VALVES - VISUALLY INSPECT FOR LEAKS, SETTLEMENT, WIRE CONNECTIONS AND PRESSURE SETTINGS. REPAIR OR ADJUST AS NEEDED.
FREQUENCY: QUARTERLY

5. MAINLINE & LATERALS - VISUALLY INSPECT FOR LEAKS OR SETTLEMENT OF TRENCH.
FREQUENCY: QUARTERLY

6. SPRINKLERS - VISUALLY CHECK FOR ANY BROKEN MISALIGNED OR CLOGGED HEADS. HEADS WITH INCORRECT ARC, INADEQUATE COVERAGE OR OVERSPRAY AND LOW HEAD DRAINAGE. REPAIR AS NEEDED.
FREQUENCY: WEEKLY

7. FILTERS AND STRAINERS - VISUALLY CHECK FOR LEAKS, BROKEN FITTING, CLEAN AND FLUSH SCREENS.

AUDIT SHALL BE IN ACCORDANCE WITH THE LATEST STATE OF CALIFORNIA LANDSCAPE WATER MANAGEMENT PROGRAM AS DESCRIBED IN THE LATEST LANDSCAPE IRRIGATION AUDITOR HANDBOOK. THE LANDSCAPE IRRIGATION AUDITS TO BE CONDUCTED BY A QUALIFIED INDIVIDUAL AND THE AUDIT SCHEDULE SHALL BE CONDUCTED AT LEAST ONCE EVERY FIVE YEARS IN ACCORDANCE WITH THE REQUIREMENTS OF TITLE 20, DIVISION 1 OF THE LOS ANGELES COUNTY CODE.

MAINTENANCE SCHEDULES. A REGULAR MAINTENANCE SCHEDULE SATISFYING THE FOLLOWING CONDITIONS SHALL BE SUBMITTED AS PART OF THE LANDSCAPE DOCUMENTATION PACKAGE.

LANDSCAPE SHALL BE MAINTAINED TO ENSURE WATER EFFICIENCY. A REGULAR MAINTENANCE SCHEDULE SHALL INCLUDE, BUT NOT BE LIMITED TO, CHECKING, ADJUSTING, AND REPAIRING IRRIGATION EQUIPMENT, RESETTING THE AUTOMATIC CONTROLLER, AERATING AND DETHATCHING TURF AREAS, REPLENISHING MULCH, FERTILIZING, PRUNING, AND WEEDING IN ALL LANDSCAPE AREAS.

WHENEVER POSSIBLE, REPAIR OF IRRIGATION EQUIPMENT SHALL BE DONE WITH THE ORIGINALLY SPECIFIED MATERIALS OR THEIR EQUIVALENTS.

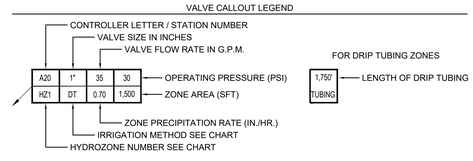
A LANDSCAPE IRRIGATION AUDIT SCHEDULE AS REQUIRED IN CHAPTER 20.09 OF TITLE 20 MAY BE RECOMMENDED. THE MAXIMUM PERIOD BETWEEN AUDITS SHALL BE FIVE YEARS.

LANDSCAPE IRRIGATION AUDIT SCHEDULES. A SCHEDULE OF LANDSCAPE IRRIGATION AUDITS OF AT LEAST EVERY FIVE YEARS MUST BE ESTABLISHED, FOR ALL BUT SINGLE-FAMILY RESIDENCES, AND OTHER PROJECTS WITH LANDSCAPE AREA LESS THAN 1 ACRE (0.405 HA). AS REQUIRED IN CHAPTER 20.09 OF TITLE 20 (UTILITY CODES), AN AUDIT SATISFYING THE FOLLOWING CONDITIONS SHALL BE SUBMITTED TO THE COUNTY AS PART OF THE LANDSCAPE DOCUMENTATION PACKAGE.

AT A MINIMUM, AUDITS SHALL BE IN ACCORDANCE WITH THE LATEST STATE OF CALIFORNIA LANDSCAPE WATER MANAGEMENT PROGRAM AS DESCRIBED IN THE LANDSCAPE IRRIGATION AUDITOR HANDBOOK, PREPARED FOR THE CALIFORNIA DEPARTMENT OF WATER RESOURCES, WATER CONSERVATION OFFICE, THE ENTIRE DOCUMENT, WHICH IS HEREBY INCORPORATED BY REFERENCE.

THE SCHEDULE SHALL PROVIDE FOR LANDSCAPE IRRIGATION AUDITS TO BE CONDUCTED BY A QUALIFIED INDIVIDUAL AS DETERMINED BY THE DIRECTOR AT LEAST ONCE EVERY FIVE YEARS IN ACCORDANCE WITH THE REQUIREMENTS OF TITLE 20, DIVISION 1 OF THE LOS ANGELES COUNTY CODE.

CONTRACTOR TO PROTECT AND PRESERVE IN PLACE ALL EXISTING SURVEY MONUMENTS. ANY MONUMENTS DISTURBED SHALL BE RESET BY A LICENSED LAND SURVEYOR AND THE APPROPRIATE CORNER RECORD MUST BE FILED WITH THE COUNTY OF LOS ANGELES.



IRRIGATION NOTES

1. ALL LOCAL MUNICIPAL AND STATE LAWS, RULES AND REGULATIONS GOVERNING OR RELATING TO ANY PORTION OF THIS WORK ARE HEREBY INCORPORATED INTO AND MADE A PART OF THESE SPECIFICATIONS AND THEIR PROVISIONS SHALL BE CARRIED OUT BY THE CONTRACTOR.
2. THE CONTRACTOR SHALL VERIFY THE LOCATIONS OF ALL EXISTING UTILITIES, STRUCTURES AND SERVICES BEFORE COMMENCING WORK. THE LOCATIONS OF UTILITIES, STRUCTURES AND SERVICES SHOWN IN THESE PLANS ARE APPROXIMATE ONLY. ANY DISCREPANCIES BETWEEN THESE PLANS AND ACTUAL FIELD CONDITIONS SHALL BE REPORTED TO THE OWNER'S REPRESENTATIVE.
3. THE CONTRACTOR SHALL OBTAIN THE PERTINENT ENGINEERING OR ARCHITECTURAL PLANS BEFORE BEGINNING WORK.
4. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS REQUIRED TO PERFORM THE WORK INDICATED HEREIN BEFORE BEGINNING WORK.
5. THIS DESIGN IS DIAGRAMMATIC. ALL EQUIPMENT SHOWN IN PAVED AREAS IS FOR DESIGN CLARITY ONLY AND IS TO BE INSTALLED WITHIN PLANTING AREAS.
6. THE CONTRACTOR SHALL NOT WILLFULLY INSTALL ANY EQUIPMENT AS SHOWN ON THE PLANS WHEN IT IS OBVIOUS IN THE FIELD THAT UNKNOWN CONDITIONS EXIST THAT WERE NOT EVIDENT AT THE TIME THESE PLANS WERE PREPARED. ANY SUCH CONDITIONS SHALL BE BROUGHT TO THE ATTENTION OF THE OWNER'S REPRESENTATIVE PRIOR TO ANY WORK OR THE IRRIGATION CONTRACTOR SHALL ASSUME ALL RESPONSIBILITY FOR ANY FIELD CHANGES DEEMED NECESSARY BY THE OWNER.
7. INSTALL ALL EQUIPMENT AS SHOWN IN THE DETAILS AND SPECIFICATIONS. CONTRACTOR SHALL BE RESPONSIBLE TO COMPLY WITH LOCAL CITY, COUNTY AND STATE REQUIREMENTS FOR BOTH EQUIPMENT AND INSTALLATION.
8. ACTUAL LOCATION FOR THE INSTALLATION OF THE BACKFLOW PREVENTER AND THE AUTOMATIC CONTROLLER IS TO BE DETERMINED IN THE FIELD BY THE OWNER'S AUTHORIZED REPRESENTATIVE.
9. CONTRACTOR IS TO PROVIDE AN ADDITIONAL PILOT WIRE FROM CONTROLLER ALONG ENTIRETY OF MAIN LINE TO THE LAST RCV ON EACH AND EVERY LEG OF MAIN LINE. LABEL SPARE WIRES AT BOTH ENDS.
10. ALL PIPE UNDER PAVED AREAS TO BE INSTALLED IN SLEEVING TWICE THE DIAMETER OF THE PIPE CARRIED. SEE LEGEND FOR TYPE. ALL WIRE UNDER PAVED AREAS TO BE INSTALLED IN A SCH. 40 SLEEVE THE SIZE REQUIRED TO EASILY PULL WIRE THROUGH. ALL SLEEVES TO BE INSTALLED WITH A MINIMUM DEPTH AS SHOWN ON THE SLEEVING DETAILS. SLEEVES TO EXTEND AT LEAST 12" PAST THE EDGE OF THE PAVING.
11. ALL QUICK COUPLER AND REMOTE CONTROL VALVES TO BE INSTALLED IN SHRUB OR GROUND COVER AREAS WHERE POSSIBLE. ALL QUICK COUPLER AND REMOTE CONTROL VALVES TO BE INSTALLED AS SHOWN ON THE INSTALLATION DETAILS. INSTALL ALL QUICK COUPLER AND REMOTE CONTROL VALVES WITHIN 18" OF HARDSCAPE.
12. ALL HEADS ARE TO BE INSTALLED WITH THE NOZZLE, SCREEN AND ARCS SHOWN ON THE PLANS. ALL HEADS ARE TO BE ADJUSTED TO PREVENT OVERSPRAY ONTO BUILDINGS, WALLS, FENCES AND HARDSCAPE. THIS INCLUDES, BUT NOT LIMITED TO, ADJUSTMENT OF DIFFUSER PIN OR ADJUSTMENT SCREW, REPLACEMENT OF PRESSURE COMPENSATING SCREENS, REPLACEMENT OF NOZZLES WITH MORE APPROPRIATE RADIUS UNITS AND THE REPLACEMENT OF NOZZLES WITH ADJUSTABLE ARC UNITS.
13. CONTRACTOR SHALL INSTALL ADDITIONAL CHECK VALVES TO HEADS AND LATERALS AS REQUIRED TO PREVENT LOW HEAD DRAINAGE.
14. THE CONTRACTOR SHALL USE PROPER GROUNDING TECHNIQUES FOR GROUNDING THE CONTROLLER AND RELATED EQUIPMENT PER MANUFACTURERS SPECIFICATIONS. SWEENEY AND ASSOCIATES RECOMMENDS MEASURING FOR PROPER GROUND AT LEAST ONCE ANNUALLY, AND NECESSARY ADJUSTMENTS MADE TO COMPLY WITH MANUFACTURER SPECIFICATIONS.

WATER EFFICIENT LANDSCAPE WORKSHEET

This worksheet is filled out by the project applicant and it is a required element of the Landscape Documentation Package

Project Name: Malibu MS & HS Ph2
Project Address: 30215 Morning View Dr. Malibu, California 90265

s+a sweeney + associates IRRIGATION DESIGN AND CONSULTING

Reference Evapotranspiration (ETo) 44.1 In./Yr. **Residential Project?** No

Hydrozone # / Planting Description*	Plant Factor	Irrigation Method*	Irrigation Efficiency (IE)*	ETAF (PF / IE)	Landscape Area (Sq. Ft.)	ETAF x Area	Estimated Total Water Use (ETWU)*
Regular Landscape Areas							
1. Low Water Use Plantings	0.30	Drip	0.81	0.38	27,238	10,350	283,002
2. Moderate Water Use Plantings	0.40	Drip	0.81	0.50	1,113	557	15,216
3. Low Water Use Trees	0.30	Bubblers	0.81	0.38	2,125	808	22,079
				Totals:	**30,476**	**11,714**	
				Totals:	**0**	**0**	
				Estimated Total Water Use (ETWU) Total:			**320,296**
				Maximum Applied Water Allowance (MAWA)*:			**374,974**

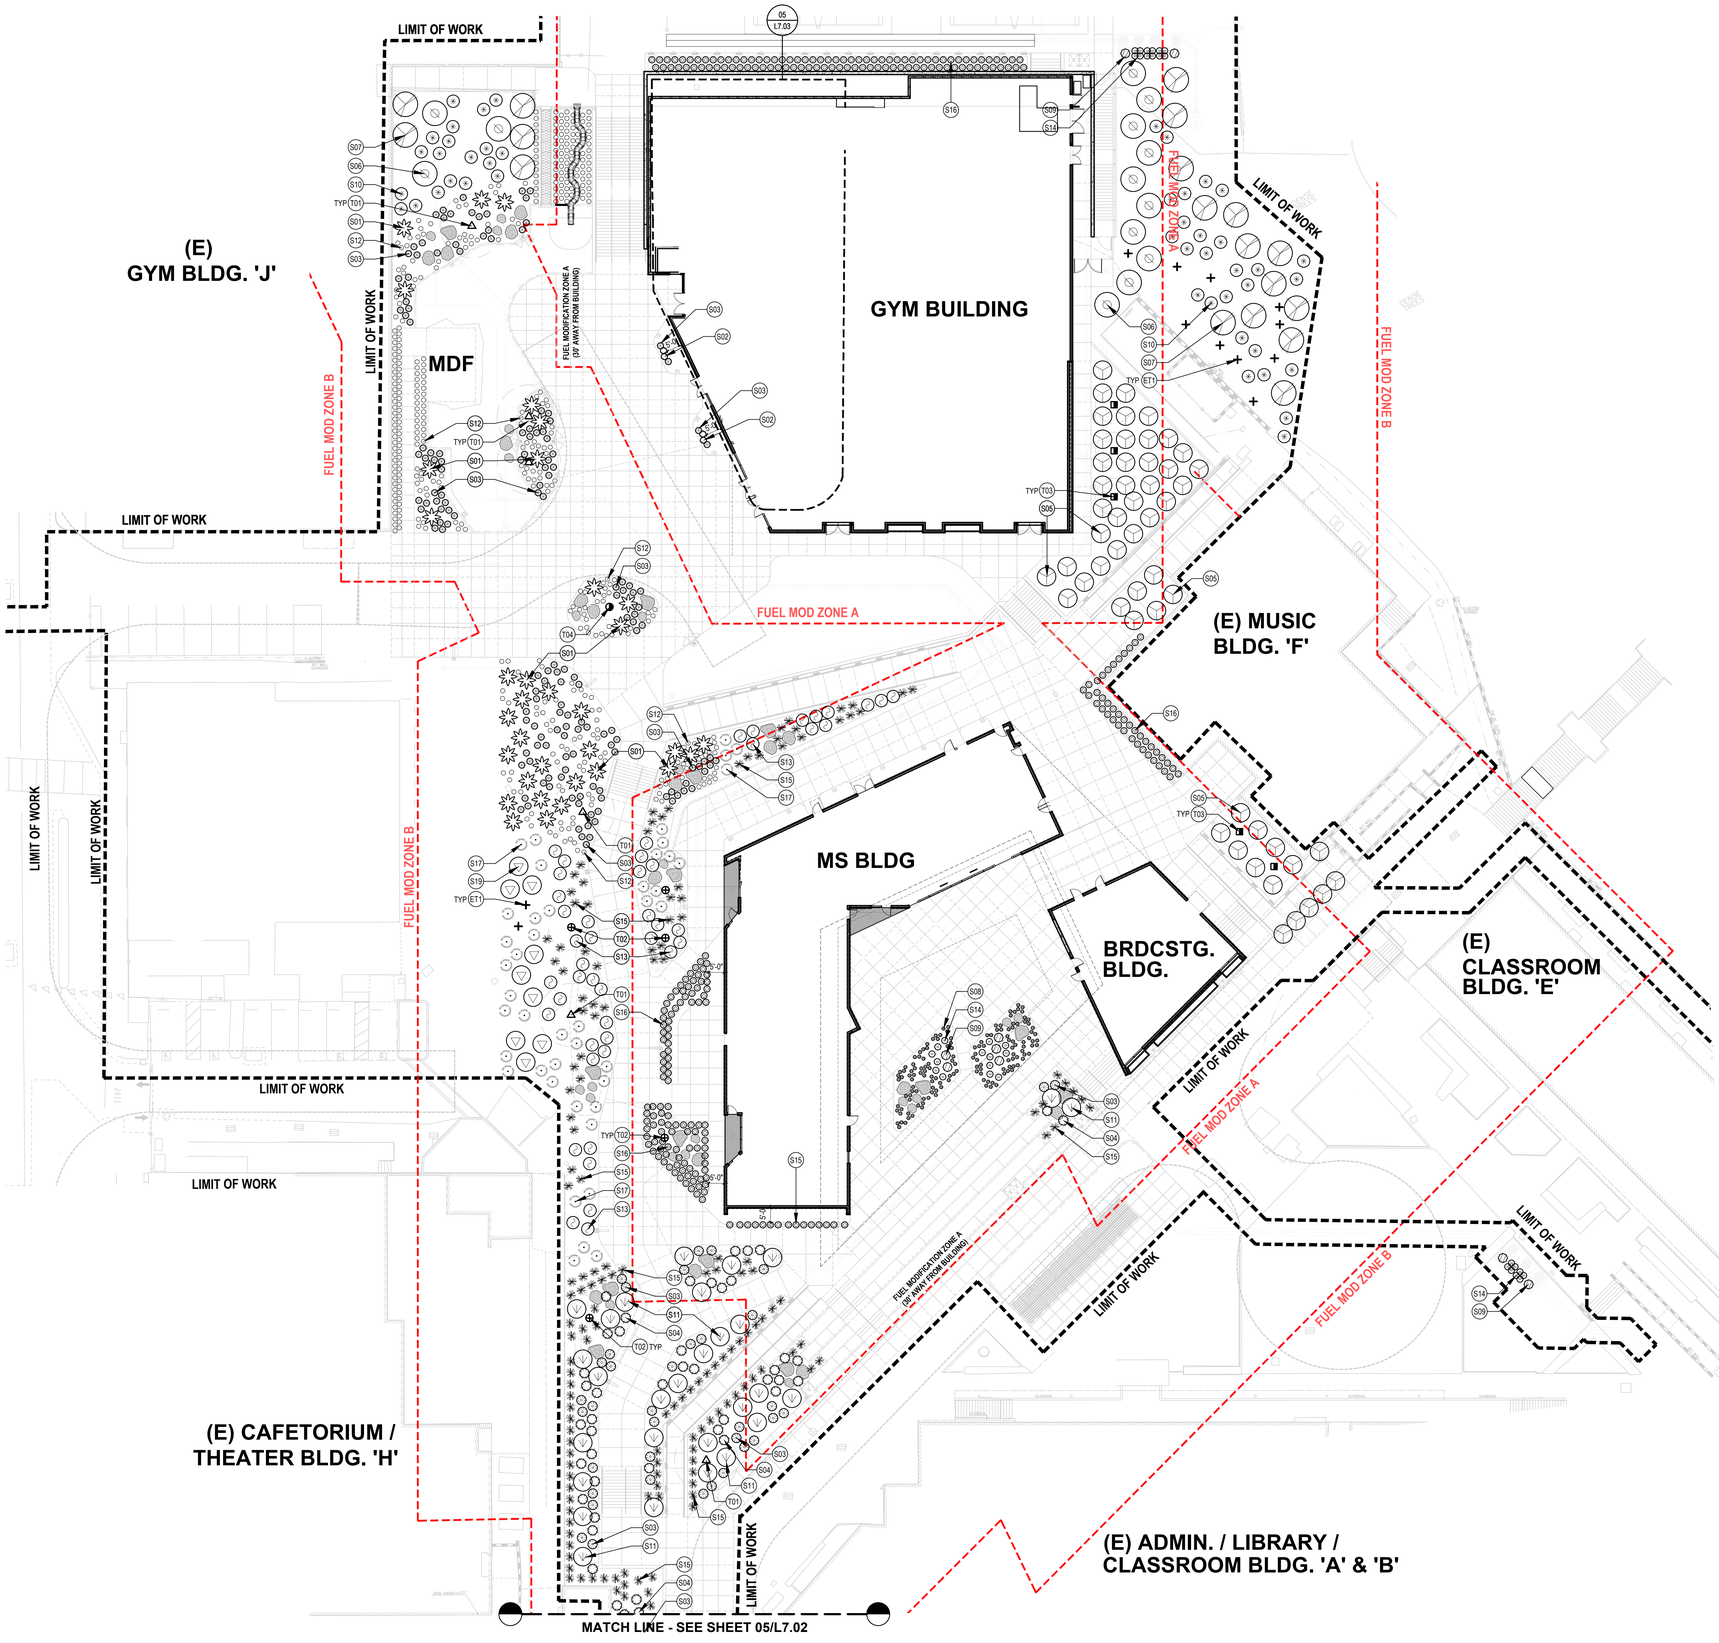
* Hydrozone # / Planting Description	* Irrigation Method	* Irrigation Efficiency
E.g.	*Overhead Spray of*	*0.75 for Spray*
1.) Front Lawn	*Drip*	*0.81 for Drip*
2.) Low Water Use Plantings		
3.) Medium Water Use Plantings		

** ETWU (Annual Gallons Required) = ETo x 0.62 x ETAF x Area*
Where 0.62 is a conversion factor that converts acre-inches/acre/year to gallons/square foot/year.

** MAWA (Annual Gallons Allowed) = ETo x 0.62 x [(ETAF x LA) + ((1 - ETAF) x SLA)]*
Where 0.62 is a conversion factor that converts acre-inches/acre/year to gallons/square foot/year,
LA is the total landscape area in square feet, SLA is the total special landscape area in square feet,
and ETAF is 0.55 for residential projects and 0.45 for non-residential projects.

Evapotranspiration Adjustment Factor (ETAF) Calculations

This non-residential project complies with the WELO and its average ETAF is less than 0.45



Regular Landscape Areas (Excludes Special Landscape Areas)	
Total ETAF x Area	11,714
Total Area	30,476
Average ETAF	**0.38**

All Landscape Areas (Includes Special Landscape Areas)	
Total ETAF x Area	11,714
Total Area	30,476
Average ETAF	**0.38**

BIOLOGY REVIEW REFERRAL SHEET

TO: City of Malibu Biologist

FROM: City of Malibu Planning Department **REVISED DATE** 11/19/2025

PROJECT NUMBER: CDP 25-032

JOB ADDRESS: 30215 MORNING VIEW DR

APPLICANT / CONTACT: Elisa Younger, LPA Design Studios

APPLICANT EMAIL: eyounger@lpadesignstudios.com

PLANNER: Richard Greenbauer

PROJECT DESCRIPTION: Phase II of the Malibu Middle and High School Specific Plan: construction of three new buildings with associated landscaping and site utilities, OWTS with connections to the new and existing buildings

REVISION:

TO: Malibu Planning Department and/or Applicant

FROM: City Biologist, Courtney McCammon

_____ **The project review package is INCOMPLETE and; CANNOT proceed through Final Planning Review until corrections and conditions from Biological Review are incorporated into the proposed project design** (See Attached).

X _____ **The project is APPROVED, consistent with City Goals & Policies associated with the protection of biological resources and CAN proceed through the Planning process.**

Building Plan Check (BPC) Required ☐ Yes ☐ No BPC Fees Req'd $_____

_____ **The project may have the potential to significantly impact the following resources, either individually or cumulatively: Sensitive Species or Habitat, Watersheds, and/or Shoreline Resources and therefore Requires Review by the Environmental Review Board (ERB).**

Courtney McCammon 11/25/25

Signature Date

Additional requirements/conditions may be imposed upon review of plan revision

REVIEW FINDINGS

Review Status:	☐	**INCOMPLETE**: Additional information and/or a response to the listed review comments is required.
	☒	**APPROVED**: The project has been approved with regards to biological impacts.
	☐	**CANNNOT APPROVE AS SUBMITTED**: The proposed project does not conform to the requirements of the MMC and/or LCP.
	☐	**ERB**: This project has the potential to impact ESHA and may require review by the Environmental Review Board pursuant to LIP Section 4.4.4

Recycled Paper

DISCUSSION:

1. The Maximum Applied Water Allowance (MAWA) for this project totals 374,974 gallons per year (gpy). The Estimated Applied Water Use (EAWU) totals 320,296 gpy. Therefore, the project meets the Landscape Water Conservation Ordinance Requirements.

RECOMMENDATIONS:

1. The project is recommended for **APPROVAL** with the following conditions:

   A. Prior to installation of any landscaping, the applicant shall obtain plumbing permit for the proposed irrigation system from the Building Safety Division.

   B. Prior to or at the time of a Planning final inspection, the property owner/applicant shall submit to the case planner a copy of the plumbing permit for the irrigation system installation that has been signed off by the Building Safety Division.

   C. Prior to final Planning inspection or other final project sign off (as applicable), the applicant shall submit to the Planning Director for review and approval a certificate of completion in accordance with the Landscape Water Conservation Ordinance (MMC 17.53). The certificate shall include the property owner's signed acceptance of responsibility for maintaining the landscaping and irrigation in accordance with the approved plans and MMC 17.53. (form attached)

   D. Prior to Final Plan Check Approval, if your property is serviced by the Los Angeles County Waterworks District No. 29, please provide landscape water use approval from that department. For approval contact:

      LA County Waterworks District 29
      Address: 23533 Civic Center Way, Malibu, CA 90265
      Email: wwsmaeng@dpw.lacounty.gov
      Phone: (310) 317 – 0209

      Please note: submit plans through EPIC-LA using the "Waterworks Division Landscape Water Efficiency Approval" application. This action may require several weeks. As such, the applicant should submit their approved landscape plans as soon as feasible in order to avoid a delay at plan check.

   E. Vegetation forming a view impermeable condition (hedge), serving the same function as a fence or wall, occurring within the side or rear yard setback shall be maintained at or below six feet in height. View impermeable hedges occurring within the front yard setback serving the same function as a fence or wall shall be maintained at or below 42 inches in height. Three sequential violations of this condition will result in a requirement to permanently remove the vegetation from the site.

F. Vegetation shall be situated on the property so as not to obstruct the primary view from private property at any given time (given consideration of its future growth).

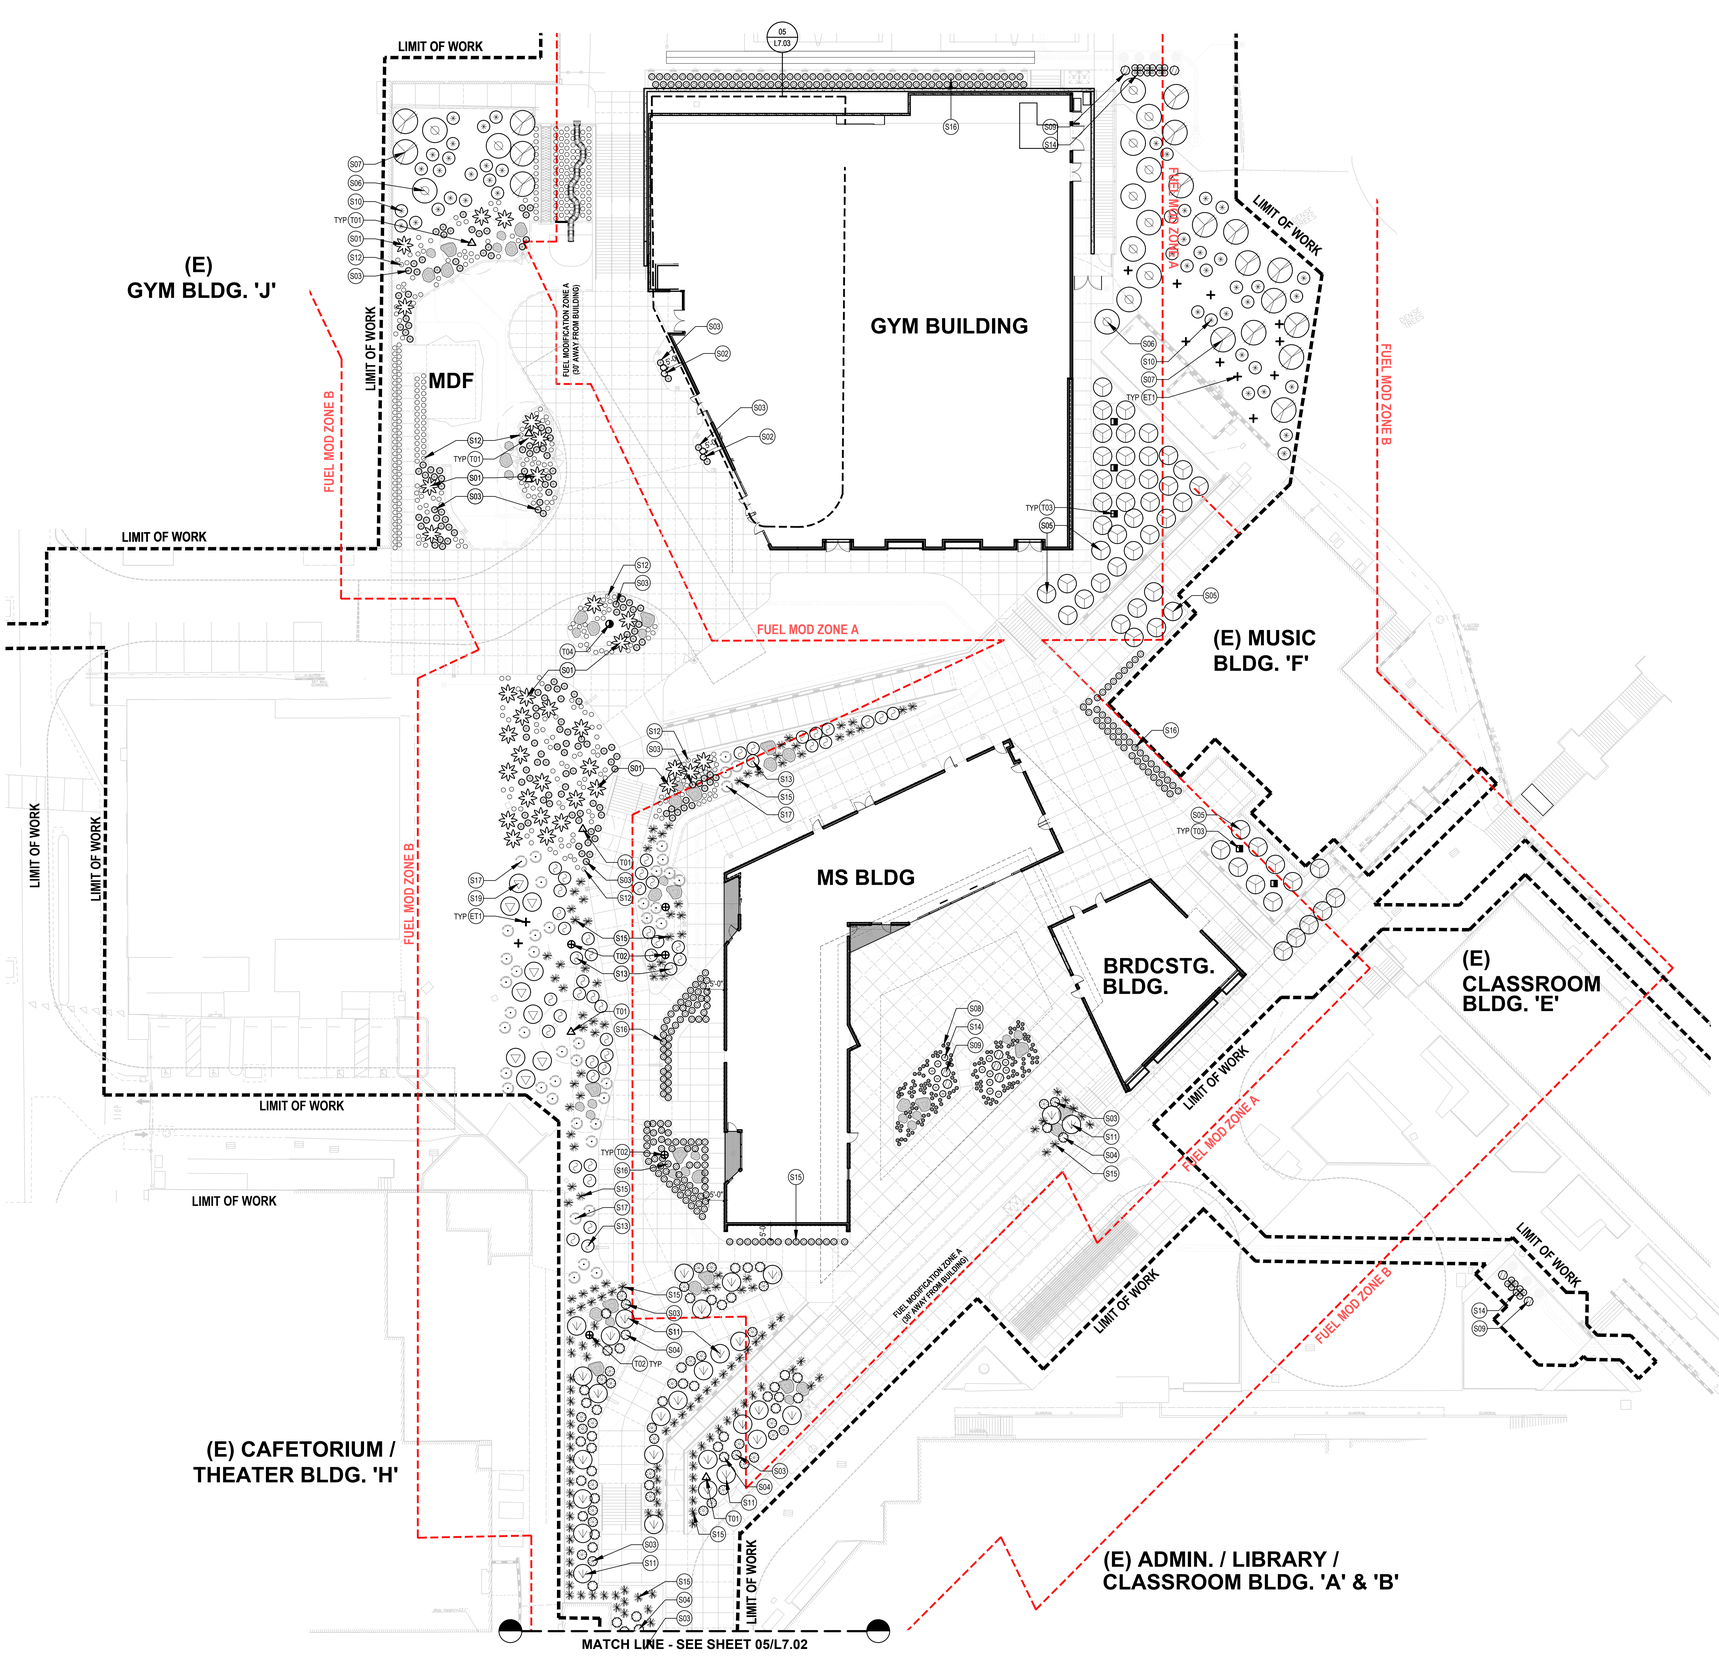
G. Invasive plant species, as determined by the City of Malibu, are prohibited.

H. No vegetation is permitted within 5 feet of any structure.

I. No non-native plant species shall be approved greater than 50 feet from the residential structure.

J. The landscape plan shall prohibit the use of building materials treated with toxic compounds such as creosote and copper arsenate.

K. Grading/excavation/vegetation removal scheduled between February 1 - September 15 will require nesting bird surveys by a qualified biologist prior to initiation of such activities. Surveys shall be completed no more than five days from proposed initiation of site preparation activities. Should active nests be identified, a buffer area no less than 150 feet (300 feet for raptors) shall be fenced off until it is determined by a qualified biologist that the nest is no longer active. A report discussing the results of the surveys shall be turned in to the City within two business days of completion of surveys.



L. Night lighting from exterior and interior sources shall be minimized. All exterior lighting shall be low intensity and shielded so it is directed downward and inward so that there is no offsite glare or lighting of natural habitat areas. Up-lighting is prohibited.

2. **PRIOR TO ISSUING A CERTIFICATE OF OCCUPANCY**, the City Biologist shall inspect the project site and determine that all planning conditions to protect natural resources are in compliance with the approved plans.

-o0o-

If you have any questions regarding the above requirements, please contact the City Biologist office at your earliest convenience.

ENVIRONMENTAL HEALTH REVIEW
REFERRAL SHEET

TO: City of Malibu Environmental Health Staff

FROM: City of Malibu Planning Staff **REVISED DATE** 10/14/2025

PROJECT NUMBER: CDP 25-032

JOB ADDRESS: 30215 MORNING VIEW DR

APPLICANT / CONTACT: Elisa Younger, LPA Design Studios

APPLICANT EMAIL: eyounger@lpadesignstudios.com

PROJECT DESCRIPTION: Phase II of the Malibu Middle and High School Specific Plan: construction of three new buildings with associated landscaping and site utilities, OWTS with connections to the new and existing buildings

REVISION:

TO: Malibu Planning Department and/or Applicant

FROM: Malibu Environmental Health Staff

✓ **Conformance Review Complete** for project submittals reviewed with respect to the City of Malibu Local Coastal Plan/Local Implementation Plan (LCP/LIP) and Malibu Municipal Code (MMC). The Conditions of Planning conformance review and plan check review comments listed on the attached review sheet(s) (or else handwritten below) shall be addressed prior to plan check approval.

Building Plan Check (BPC) Required ☐ Yes ☑ No BPC Fees Req'd $

_____ **Conformance Review Incomplete** for the City of Malibu LCP/LIP and MMC. The Planning stage review comments listed on the City of Malibu Environmental Health review sheet(s) shall be addressed prior to conformance review completion.

OWTS Plot Plan: ☐ **NOT REQUIRED**

☑ **REQUIRED (attached hereto)** ☐ **REQUIRED (not attached)**

Matthew Thomas 11/19/2025

Signature **Date**

The applicant must submit to City of Malibu Environmental Health Staff to determine whether or not an onsite wastewater treatment system (OWTS) Plot Plan approval is required.

Public Counter hours for Environmental Health staff are Tuesdays and Thursdays, 8:00 AM – 12:00 PM.

REVIEW FINDINGS

Planning Stage:	☒	**CONFORMANCE REVIEW COMPLETE** for the City of Malibu Local Coastal Program (LCP)/Local Implementation Plan (LIP) and Malibu Municipal Code (MMC). The listed conditions of Planning stage conformance review and plan check review comments shall be addressed prior to plan check approval.
	☐	**CONFORMANCE REVIEW INCOMPLETE** for the City of Malibu LCP/LIP and MMC. The listed Planning stage review comments shall be addressed prior to conformance review completion.
OWTS Plot Plan:	☐	**NOT REQUIRED**
	☒	**REQUIRED (attached hereto)** ☐ **REQUIRED (not attached)**

Based upon the project description and submittal information noted above, a **conformance review** was completed for a new advanced onsite wastewater treatment system (OWTS) proposed to serve the disposal needs of the subject property. The proposed advanced OWTS meets the minimum requirements of the Malibu Municipal Code (MMC) and the City of Malibu Local Coastal Program (LCP)/Local Implementation Plan (LIP).

Conditions of Planning Conformance Review:

1) **Waste Discharge Requirements:** *Monitoring and reporting parameters required under MRP No. CI-10846 of the Waste Discharge Requirements by the Regional Water Quality Control Board (RWQCB) shall be submitted to the Los Angeles RWQCB on the effective date of coverage under the General WDRs.*

   No further Environmental Health review is required.

-o0o-

If you have any questions regarding the above requirements, please contact the Environmental Health office at your earliest convenience.

NOTES:

1. This conformance review is for a new a new middle school, gym, 2 equalization/storage tanks, and 2 lift stations, to be connected to the advanced onsite wastewater system (OWTS) under the City of Malibu Planning case #CDPA 24-005.

2. This review relates only to the minimum requirements of the MMC and the Local Coastal Program, and does not include an evaluation of any geological, or other potential problems, which may require an alternative method of wastewater treatment.

3. This review is valid for one year, or until the Local Coastal Program and/or Administrative Policy changes render it noncomplying.

4. ***The proposed OWTS must conform to the monitoring and reporting parameters required under MRP No. CI-10846 of the Waste Discharge Requirements by the Regional Water Quality Control Board. Specifically, the minimum required separation to groundwater must be maintained.*

Review Findings

Coastal Development Permit Review

☒ The project is **ACCEPTABLE** from a geotechnical perspective.

☐ The project is **NOT ACCEPTABLE** from a geotechnical perspective. The listed 'Review Comments' shall be addressed prior to acceptance.

Project submittals were reviewed from a geotechnical perspective for conformance with applicable codes, guidelines, and standards of practice, including the following current City adopted standards:

- City of Malibu Local Coastal Program – Land Use Plan and Local Implementation Plan (LCP-LUP and LCP-LIP)
- Malibu Municipal Code – Title 15, Buildings and Construction
- City of Malibu Guidelines for the Preparation of Geotechnical Reports and Procedures for Report Submittal (November 2013) referred to herein as Geotechnical Report Guidelines

In the case of conflicting requirements between the Geotechnical Guidelines and any other referenced standards, the latest standard will apply. The Applicant is responsible for complying with the submittal requirements for all Planning variances, as appropriate; any questions regarding variances should be directed to the case Planner.

Remarks:

The project geotechnical review by the City is Planning-stage only for Local Coastal Program (LCP) conformance, pursuant to the submitted Coastal Development Permit application. The proposed project is regulated by the Division of State Architect-Structural Safety (DSA-SS) provisions within the 2022 California Building Code (CCR Title 24, Part 2). Building plan check review and building permit issuance are not within the City's purview.

The referenced response geotechnical report, response OWTS design report, and civil plans were reviewed by the City's consultants from a geotechnical perspective. This phase of the proposed development includes the demolition of the existing relocatable buildings, demolition of buildings K and I, and the construction of three new buildings, a 9,952 square foot one-story special education and campus wellness center, a new 31,846 square foot two-story gymnasium with offices and storage, and a new 265 square foot MDF building (technology building) connected by canopies and shade structures, along with a perimeter drive access for building access (fire lane), paved parking, utilities, hardscape and pavers. Grading consists of 8,140 yards of cut and 4,303 yards of fill, non-exempt, 6,028 yards of remedial and 3,837 yards of export.

Infiltration testing was performed at two locations from approximately 15 to 30 feet and yielded results that infiltration was not feasible at the locations tested.

Based on the submitted information, the new Malibu High School buildings will be serviced by a new advanced onsite wastewater treatment system (OWTS) consisting of a new 20,000-gallon Xerxes primary tank, 20,000-gallon Xerxes equalization tank, 5,000-gallon Xerxes grease interceptor, and four MicroSepTec EnviroServer ES25 treatment tanks housed in fiberglass reinforced plastic (FRP) tanks with effluent filters and UV disinfection systems. Effluent will be disposed in four present 6' diameter x 24' BI seepage pits with 6' caps (SP-1 thru SP-4) and an existing 6' diameter x 24' BI seepage pit with a 6' cap (SP-5) with 100% expansion consisting of two 6' diameter x 24' BI seepage pits with 6' caps (SP-5 and SP-6). The existing OWTS components on the property that will not be re-used for the new OWTS will be properly abandoned.

NOTE: The EIR for the Malibu Middle and High School Campus Specific Plan Project prepared by Placeworks, concludes, based on the Fault Rupture hazard Investigation prepared by Leighton Consulting, Inc. dated March 9, 2021, that, " … *no evidence of active faulting was identified during the Fault Rupture*

Hazard Investigation (Leighton Consulting, Inc. 2021b). The potential for fault rupture at the Project Site is considered low during the life of the school, and the student risk factor is therefore also considered low…the Escondido Thrust Fault is a potentially active fault that is mapped as traversing the Project Site (also known as the Malibu Coast Fault, Paradise Cove Fault, Rodriguez Canyon Fault, Ramirez Fault, and Escondido Thrust). It is likely more than 300,000 years old and poses no planning constraints to the Proposed Project."

NOTE: The referenced geotechnical report for the Phase II project includes the aquatics Center. However, the undersigned engineering geologic reviewer discussed the scope of the Phase II project with the Project Architect, and the aquatics center is **NOT** a part of the Phase II project.

Planning Level Geotechnical Review Comments:

None.

Notes for the Plans:

1. Please include the total grading yardage verification certificate on the civil plans.
2. The Project Geotechnical Consultant has recommended that additional Expansion Index testing be performed after the completion of grading to quantify the EI values presented in the report. Please include this comment as a note on the plans.

Please direct questions regarding this review sheet to the City's Geotechnical consultants listed below.

FIRE DEPARTMENT REVIEW
REFERRAL SHEET

TO: Los Angeles County Fire Department

FROM: City of Malibu Planning Division **DATE:** 08/05/2025

PROJECT NUMBER:	CDP 25-032
JOB ADDRESS:	30215 MORNING VIEW DR
APPLICANT / CONTACT:	Elisa Younger, LPA Design Studios
APPLICANT ADDRESS:	5301 California Ave, Suite 100 Irvine, CA 92617
APPLICANT PHONE #:	(949) 701-4115
APPLICANT FAX #:	
PROJECT DESCRIPTION:	Phase II of the Malibu Middle and High School Specific Plan: construction of three new buildings with associated landscaping and site utilities, OWTS with connections to the new and existing buildings

---

TO: Malibu Planning Division and/or Applicant
FROM: Fire Prevention Engineering Assistant

Compliance with the conditions checked below is required prior to Fire Department approval.

The project DOES require Fire Department Plan Review and Developer Fee payment	✓
The project DOES NOT require Fire Department Plan Review	—
The required fire flow for this project is 1,500 gallons per minute at 20 pounds per square inch for a 1 hour duration. (Provide flow information from the water dept.)	✓
The project is required to have an interior automatic fire sprinkler system.	✓
Final Fuel Modification Plan Approval is required prior to Fire Department Approval	✓

Conditions below marked "not approved" shall be corrected on the site plan and resubmitted for Fire Department approval.

	App'd	N/app'd
Required Fire Department vehicular access (including width and grade %) as shown from the public street to the proposed project.	✓	
Required and/or proposed Fire Department Vehicular Turnaround	✓	
Required 5 foot wide Fire Department Walking Access (including grade %)	✓	
Width of proposed driveway/access roadway gates	✓	

*County of Los Angeles Fire Department Approval Expires with City Planning permits expiration, revisions to the County of Los Angeles Fire Code or revisions to Fire Department regulations and standards.

**Minor changes may be approved by Fire Prevention Engineering, provided such changes achieve substantially the same results and the project maintains compliance with the County of Los Angeles Fire Code valid at the time revised plans are submitted. Applicable review fees shall be required.

J. Mann — 11/06/2025

SIGNATURE **DATE**

Additional requirements/conditions may be imposed upon review of complete architectural plans.
The Fire Prevention Engineering may be contacted by phone at (818) 880-0341or at the Fire Department Counter:
26600 Agoura Road, Suite 110, Calabasas, CA 91302; Hours: Monday – Thursday between 7:00 AM and 11:00 AM

City of Malibu
MEMORANDUM

To: Community Development Department, Planning Division

From: Public Works Department
Kevin Chang, Assistant Civil Engineer

Date: October 27, 2025

Re: Proposed Conditions of Approval for 30215 Morning View Dr, CDP 25-032

The Public Works Department has reviewed the plans submitted for the above referenced project. Based on this review sufficient information has been submitted to confirm that conformance with the Malibu Local Coastal Plan (LCP) and the Malibu Municipal Code (MMC) can be attained. Prior to the issuance of building and grading permits, the applicant shall comply with the following conditions.

GRADING AND DRAINAGE

1. Clearing and grading during the rainy season (extending from November 1 to March 31) shall be prohibited for development LIP Section 17.3.1 that:
    - Is located within or adjacent to ESHA, or
    - Includes grading on slopes greater than 4:1
    - Approved grading for development that is located within or adjacent to ESHA or on slopes greater than 4:1 shall not be undertaken unless there is sufficient time to complete grading operations before the rainy season. If grading operations are not completed before the rainy season begins, grading shall be halted and temporary erosion control measures shall be put into place to minimize erosion until grading resumes after March 31, unless the City determines that completion of grading would be more protective of resources

2. Exported soil from a site shall be taken to the County Landfill or to a site with an active grading permit and the ability to accept the material in compliance with the City's LIP Section 8.3. **A note shall be placed on the project that addresses this condition.**

3. A grading and drainage plan shall be approved containing the following information prior to the issuance of grading permits for the project.

- Public Works Department General Notes
- The existing and proposed square footage of impervious coverage on the property shall be shown on the grading plan (including separate areas for buildings, driveways, walkways, parking, tennis courts and pool decks).
- The limits of land to be disturbed during project development shall be delineated on the grading plan and a total area shall be shown on the plan. Areas disturbed by grading equipment beyond the limits of grading, areas disturbed for the installation of the septic system, and areas disturbed for the installation of the detention system shall be included within the area delineated.
- The grading limits shall include the temporary cuts made for retaining walls, buttresses, and over excavations for fill slopes and shall be shown on the grading plan.
- If the property contains trees that are to be protected they shall be highlighted on the grading plan.
- If the property contains rare and endangered species as identified in the resources study the grading plan shall contain a prominent note identifying the areas to be protected (to be left undisturbed). Fencing of these areas shall be delineated on the grading plan if required by the City Biologist.
- Private storm drain systems shall be shown on the grading plan. Systems greater than 12-inch diameter shall also have a plan and profile for the system included with the grading plan.
- Public storm drain modifications shown on the grading plan shall be approved by the Public Works Department prior to the issuance of the grading permit.

STORMWATER

4. A Storm Water Pollution Prevention Plan shall be provided prior to the issuance of the Grading/Building permits for the project. This plan shall include an Erosion and Sediment Control Plan (ESCP) that includes, but not limited to:

Erosion Controls	Hydraulic Mulch
	Hydroseeding
	Soil Binders
	Straw Mulch
	Geotextiles and Mats
	Wood Mulching
Sediment Controls	Fiber Rolls
	Gravel Bag Berm
	Street Sweeping and/ or Vacuum
	Storm Drain Inlet Protection
	Scheduling
	Check Dam
Additional Controls	Wind Erosion Controls
	Stabilized Construction Entrance/ Exit

	Stabilized Construction Roadway
	Entrance/ Exit Tire Wash
Non-Stormwater Management	Vehicle and Equipment Washing
	Vehicle and Equipment Fueling
	Vehicle and Equipment Maintenance
Waste Management	Material Delivery and Storage
	Spill Prevention and Control

All Best Management Practices (BMP) shall be in accordance to the latest version of the California Stormwater Quality Association (CASQA) BMP Handbook. Designated areas for the storage of construction materials, solid waste management, and portable toilets must not disrupt drainage patterns or subject the material to erosion by site runoff.

5. Prior to the approval of any permits and prior to the applicant submitting the required Construction General Permit documents to the State Water Quality Control Board, the applicant shall submit to the Public Works Department for review and approval an Erosion and Sediment Control Plan (ESCP). The ESCP shall contain appropriate site-specific construction site BMPs and developed and certified by a Qualified SWPPP Developer (QWD). All structural BMPs must be designed by a licensed California Engineer. The ESCP must address the following elements:

   - Methods to minimize the footprint of the disturbed area and to prevent soil compaction outside the disturbed area.
   - Methods used to protect native vegetation and trees.
   - Sediment/Erosion Control.
   - Controls to prevent tracking on and off the site.
   - Non-storm water controls.
   - Material management (delivery and storage).
   - Spill Prevention and Control.
   - Waste Management
   - Identification of site Risk Level as identified per the requirements in Appendix 1 of the Construction General Permit.
   - Landowner must sign the following statement on the ESCP:

     "I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate and complete. I am aware that submitting false and/or inaccurate information, failing to update the ESCP to reflect current conditions, or failing to properly and/or adequately implement the ESCP

may result in revocation of grading and/or other permits or other sanctions provided by law."

6. A State Construction activity permit is required for this project due to the disturbance of more than one acre of land for development. Provide a copy of the letter from the State Water Quality Control Board containing the WDID number prior to the issuance of grading or building permits.

7. A Storm Water Management Plan (SWMP) is required for this project. Storm drainage improvements are required to mitigate increased runoff generated by property development. The applicant shall have the choice of one method specified within the City's Local Implementation Plan Section 17.3.2.B.2. The SWMP shall be supported by a hydrology and hydraulic study that identifies all areas contributory to the property and an analysis of the predevelopment and post development drainage of the site. The SWMP shall identify the Site design and Source control Best Management Practices (BMP's) that have been implemented in the design of the project (See LIP Chapter 17 Appendix A). The SWMP shall be reviewed and approved by the Public Works Department prior to the issuance of the grading/building permits for this project.

8. A Water Quality Mitigation Plan (WQMP) is required for this project. The WQMP shall be supported by a hydrology and hydraulic study that identifies all areas contributory to the property and an analysis of the predevelopment and post development drainage of the site. The WQMP shall meet all the requirements of the City's current Municipal Separate Stormwater Sewer System (MS4) permit. The following elements shall be included within the WQMP:
    - Site Design Best Management Practices (BMP's)
    - Source Control BMP's
    - Treatment Control BMP's that retains on-site the Stormwater Quality Design Volume (SWQDv). Or where it is technical infeasible to retain on-site, the project must biofiltrate 1.5 times the SWQDv that is not retained on-site.
    - Drainage Improvements
    - A plan for the maintenance and monitoring of the proposed treatment BMP's for the expected life of the structure.
    - A copy of the WQMP shall be filed against the property to provide constructive notice to future property owners of their obligation to maintain the water quality measures installed during construction prior to the issuance of grading or building permits.
    - The WQMP shall be submitted to Public Works Department and the fee applicable at time of submittal for the review of the WQMP shall be paid prior to the start of the technical review. The WQMP shall be approved prior to the Public Works Department's approval of the grading and drainage plan and or building plans. The Public Works Department will tentatively approve the plan and will keep a copy until the completion of the project. Once the project is completed, the applicant shall verify the installation of the BMP's, make any revisions to the WQMP, and resubmit to the Public Works Department for approval. The original signed and

notarized document shall be recorded with the County Recorder. A copy of the WQMP shall be submitted to the Public Works Department prior to the certificate of occupancy.

MISCELLANOUS

9. The developer's consulting engineer shall sign the final plans prior to the issuance of permits.

City of Malibu

LOS ANGELES COUNTY WATERWORKS DISTRICTS REVIEW
REFERRAL SHEET

FROM: City of Malibu Planning Department **DATE: 08/05/2025**

PROJECT NUMBER:	**CDP 25-032**
JOB ADDRESS:	**30215 MORNING VIEW DR**
APPLICANT / CONTACT:	**Elisa Younger, LPA Design Studios**
APPLICANT EMAIL:	**eyounger@lpadesignstudios.com**
APPLICANT PHONE #:	**(949) 701-4115**
PLANNER:	**Richard Greenbauer**
PROJECT DESCRIPTION:	**Phase II of the Malibu Middle and High School Specific Plan: construction of three new buildings with associated landscaping and site utilities, OWTS with connections to the new and existing buildings**

TO: Malibu Planning Department and/or Applicant

FROM: LACWD No. 29, Malibu

Compliance with the conditions checked below is required prior to Waterworks District approval

The project **DOES NOT** require any system improvements for domestic and/or fire flow conditions	X*
The project **DOES NOT** require capital improvement fees and/or participation fees	X*
The project **DOES** require a Will Serve Letter ***(Final Waterworks Districts approval)***	X*
The project **DOES** require capital improvement fees and/or participation fees	
The project **DOES** require the owner to execute an agreement and participate financially in the design and construction of a future water system to increase local storage and conveyance capacity in the event of an interruption of the primary water supply	
The project **DOES** require private contract water system improvements for domestic and/or fire flow conditions	

The required fire flow for this project set by the Fire Department is 1,500** gallons per minute at 20 pounds per square inch for a 1** hour duration

Scope of water system improvements required:

*Necessary improvements completed and fees paid through specification WWD 29-885 (PC).
**FEPC2025-0779.

Note: Los Angeles County Waterworks District No. 29, Malibu approval expires upon the earliest of the following: 1) Two years from the date of this form; 2) Expiration date of the City Planning permit(s), or 3) Date County adopts changes to the county of Los Ange/es Fire Code an makes revisions to appli le ire Department regulations and standards.

Los Angeles County Waterworks District No. 29

***Will serve* water to the above *single lot* property subject to the following conditions:**

☐	Annexation of the property into Los Angeles County Waterworks District is required. **Water service to this property will not be issued until the annexation is completed.**
☐	The appropriate fees must be paid to the District and other related water agencies.
☒	The appropriate service connection fees have been paid to Waterworks Districts for the existing 4" service connection.
☒	The property has an existing 4" compound water meter. Meter and service upgrade may be required to comply with WWD Rules and Regulations 1-H-16d.
☐	The appropriate connection fees have been paid to Waterworks Districts for the proposed service.
☐	Water system improvements will be required to be installed by the developer subject to the requirements set by the Fire Department and the District.
☒	Water meter serving the property must be installed in accordance with Waterworks' District standards.
☒	Public water system and sewage disposal system must be in compliance with Health Department separation requirements.
☐	A portion of the existing fronting water main may be required to be replaced or upgraded if the water service tap cannot be made or if damage occurs to the water main.
☒	Property may experience low water pressure and / or shortage in high demand periods.
☐	The District **CAN NOT** serve water to this property at this time.
☒	Must comply with and satisfy City of Malibu requirements in order to obtain Water Service.
☒	A USC approved backflow device is required for this property and is to be installed and maintained by the property owner and tested annually.
☒	This Will Serve Letter is for phase II of the Malibu Middle and High School Plan including construction of three new buildings only. FEPC2025-0779. Fire Flow = 1,500 gpm for 1 hour.

SUBJECT: CDP 25-032 / 30215 Morning View Dr.

SANTA MONICA – MALIBU UNIFIED SCHOOL DISTRICT'S CEQA GUIDELINES SECTION 15162 EVALUATION OF THE MALIBU MIDDLE AND HIGH SCHOOL CAMPUS PLAN PHASE 2 PROJECT (COASTAL DEVELOPMENT PERMIT NO. 25-032)

On December 6, 2024, Santa Monica–Malibu Unified School District staff met with the District's environmental consultant, PlaceWorks, and District legal counsel to review the proposed design for the Malibu Middle and High School Campus Plan – Phase 2 Project (Project) and to evaluate whether additional environmental review would be required pursuant to State CEQA Guidelines Section 15162 prior to initiating the entitlements process.

Prior to the District's meeting with the City of Malibu, PlaceWorks conducted an independent evaluation of the Phase 2 Project and determined that the environmental impacts associated with the Project had been adequately disclosed, analyzed, and mitigated, as appropriate, in the Malibu Middle and High School Specific Plan and Local Coastal Program (LCP) Amendment Project Final Environmental Impact Report (EIR) (State Clearinghouse No. 020080350). The Final EIR was certified by the Santa Monica–Malibu Unified School District on January 26, 2022, approved by the City of Malibu on October 23, 2023, and approved by the California Coastal Commission on November 17, 2023. Based on this analysis, no additional environmental review is required under CEQA for the Phase 2 Project.

On January 29, 2025, District staff, PlaceWorks, and District legal counsel met with the City of Malibu to review the proposed Phase 2 Project. At that meeting, it was further confirmed that no additional CEQA review or action would be required. The City's Senior Planner concurred with this determination, and a timeline for processing the Phase 2 Coastal Development Permit (CDP) was discussed and agreed upon.

Based on the determination that no additional environmental review was required, the District proceeded with the planning and permitting process for the Project. CEQA was not brought forward as a separate item to the Board of Education because no discretionary action was required. Once District staff, the District's Environmental Consultant, and District legal counsel confirmed that no

further CEQA review or action was necessary, no additional environmental steps were required to proceed.

On December 19, 2024, the Board of Education took action to approve the Lease-Leaseback Agreement with C.W. Driver, LLC, authorizing the District to proceed with Preliminary Construction Services and, subsequently, construction of the Phase 2 Project.

CEQA Guidelines Section 15162 states that when an EIR has been certified or a negative declaration adopted for a project, no subsequent or supplemental EIR need be prepared for the project unless the lead agency determines, on the basis of substantial evidence in the light of the whole record, one or more of the following:

- Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
- Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
- New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:
- The project will have one or more significant effects not discussed in the previous EIR or negative declaration;
- Significant effects previously examined will be substantially more severe than shown in the previous EIR;
- Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
- Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative. (CEQA Guidelines Section 15162[a]).

Factors used in determining whether subsequent environmental review is required include, but are not limited to, consistency of the later activity with the type of allowable land use, overall planned density and building intensity, geographic area analyzed, and covered infrastructure described in the Final EIR. The Phase 2 project falls within the parameters of the certified Specific Plan and would not require an amendment to the Specific Plan or the City of Malibu's Local Coastal Program. Based on the evaluation of staff, PlaceWorks and legal counsel, the District determined that the Phase 2 Project is within the scope of the program section of the Final EIR. Pursuant to CEQA Guidelines section 15162, no subsequent EIR is required because the circumstances under which the Phase 2 Project will be undertaken have not substantially changed such that new or more severe impacts would occur. Lastly, no new initial study would be required per CEQA Guidelines section 15168(c)(1) because the Phase 2 Project would not have effects that were not examined in the Final EIR.

Should you have any further questions, please contact me at 424-581-5426.

Sincerely,

Carey W. Upton

Carey Upton
Chief Operations Officer
Santa Monica-Malibu Unified School District

MEMORANDUM

DATE	December 22, 2025
TO	Noemi Avila-Zamudio
FROM	Addie Farrell, Principal Environmental Services
SUBJECT	Phase 2 Malibu Middle School Hub and Gym Project

This memorandum demonstrates that environmental impacts associated with Coastal Development Permit Application (CDP) NO.25-032 for the Malibu Middle and High School Campus Plan Phase 2 Project (project) have been adequately disclosed, evaluated, and mitigated as appropriate in the Final Environmental Impact Report (EIR) (State Clearinghouse No. 020080350) that was certified by the Santa Monica-Malibu Unified School District (District or SMMUSD), approved by the City of Malibu, and approved by the California Coastal Commission (CCC).

CDP No. 25-032 is Phase 2 of the Specific Plan (Phase 2). Phase 2 includes the following components; demolition of Building K: Classroom Building (12,698sf) and Building I: Classroom Building (11,761sf), the removal of eight portable classroom buildings, construction of a new Middle School Building (MS HUB), construction of new Middle School gym building, construction of a new Main Distribution Framework (MDF) Building, new fire lane for new building access, a new Solar Farm, connections to the recently completed wastewater treatment system to the Phase 2 buildings, and associated grading and underground utility work and site improvements.

As stated in Section 1.2.2, *Type and Purpose of this DEIR,* "Consistent with the requirements set forth in State CEQA Guidelines Section 15168(c), later activities (i.e., Phase 2) would be examined in light of the information in this DEIR to determine whether an additional environmental document must be prepared. It is the intent of the District to use this DEIR for later phases to determine whether additional tiered analysis is necessary under Section 15152 of the State CEQA Guidelines. Factors to be used in determining whether subsequent environmental review is required include but are not limited to consistency of the later activity with the type of allowable land use, overall planned density and building intensity, geographic area analyzed, and covered infrastructure described in this DEIR."

The following analysis indicates that the project does not require further environmental review pursuant to State CEQA Guidelines Section 15162 of the State CEQA Guidelines, which states that when an EIR has been certified or a negative declaration adopted for a project, no subsequent or supplemental EIR need be prepared for the project unless the lead agency determines, on the basis of substantial evidence in the light of the whole record, one or more of the following:

- Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
- Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

» New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

- The project will have one or more significant effects not discussed in the previous EIR or negative declaration;
- Significant effects previously examined will be substantially more severe than shown in the previous EIR;
- Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
- Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative. (CEQA Guidelines Section 15162[a]).

TABLE 1 PHASE 2 EIR ANALYSIS

EIR Resource Area	Consistency With Certified EIR Analysis
Aesthetics	Consistent. Implementation of the Phase 2 Project would be developed in the same footprint identified in the EIR. The EIR contemplated Phase 2 to be designed as one building; however, the current design calls for development of two buildings, the Middle School Gym and the Middle School Hub. The Middle School Gym would have a maximum height of 35 feet, and the Middle School Hub would have a maximum height of 17 feet, both of which comply with the height restrictions evaluated in the EIR. All new lighting will implement Mitigation Measures MM AES-1 through MM AES-5, which would require new lighting be designed with low-intensity, full cut-off shielded light fixtures that maintain safe light levels while avoiding off-site lighting and night sky pollution, as required by the Specific Plan and the City of Malibu Dark Sky Ordinance. Therefore, the Phase 2 Project would not result in any new or substantially more severe significant impacts related to aesthetics.
Air Quality	Consistent. The EIR included calculation of construction and operational air emissions for the development of the MMHS Specific Plan and determined that it would not exceed applicable Southern California Air Quality Management District (SCAQMD) significance criteria. The EIR further determined that the project site is consistent with the SCAQMD's Air Quality Management Plan, would not alter any climate factors, and would not create objectionable odors. Construction emissions are anticipated to be similar to the emissions estimated in the EIR, which were substantially below the SCAQMD thresholds. Additionally, during construction of the Phase 2 Project the District will implement Mitigation Measure AQ-1, which would ensure that significant impacts do not occur to nearby sensitive receptors, including MMHS students and staff. Therefore, the Phase 2 Project would not result in any new or substantially more severe significant impacts related to air quality.
Biological Resources	Consistent. The EIR determined that with the implementation of mitigation measures, impacts to biological resources would be less than significant. With the exception of the proposed Solar Farm, the footprint of the Phase 2 Project is on land already developed with buildings and paved areas and is located at least 125 feet from the ESHA. Construction related activities are required to comply with Mitigation Measures MM BIO-2 through MM BIO-4 regarding nesting bird and special status vegetation, particularly during construction of the proposed Solar Farm. Additionally, the project will implement Mitigation Measure

TABLE 1 PHASE 2 EIR ANALYSIS

EIR Resource Area	Consistency With Certified EIR Analysis
	BIO-6 to ensure conformity to the City of Malibu's Local Coastal Program Native Tree Protection Ordinance. The District is required to comply with these mitigation measures for the proposed project, which would ensure impacts on sensitive species would not be significant. Therefore, no new or substantially more severe significant impacts to biological resources would occur.
Cultural Resources	Consistent. The EIR determined that there are no eligible historic resources located on the MMHS campus. The potential for archeological and paleontological resources does exist and implementation of Mitigation Measure CUL-1 will ensure that if such resources were discovered all grading and construction efforts that would disturb the site shall cease and the resource(s) shall be evaluated and managed in accordance with CEQA Guidelines Section 15064.5. Therefore, the Phase 2 Project would not result in any new or substantially more severe significant impacts related to cultural resources.
Energy	Consistent. The EIR determined that the construction and operation of the MMHS Specific Plan would not result in wasteful, inefficient, or unnecessary consumption of energy resources, nor would the Specific Plan conflict with or obstruct a state or local plan for renewable energy or energy efficiency. The Phase 2 Project has been designed to be consistent with the project contemplated in the EIR. Therefore, the Phase 2 Project would not result in any new or substantially more severe significant impacts related to energy resources.
Geology and Soils	Consistent. The EIR determined that the MMHS campus is located in a site that could be subject to strong seismic ground shaking. As required by Mitigation Measure GEO-1, the Phase 2 Project is required to have a site-specific geotechnical report that would include design recommendations, including, but not limited to seismic design parameters, foundation design, retaining wall, grading, and trenching. Development of the Phase 2 Project would be required to comply with the California Building Code (CBC), the Field Act, and the Division of the State Architect's review to ensure that all seismic requirements under Title 24 of the CBC for school buildings are met. Implementation of these regulations would ensure that impacts related to groundshaking, liquefaction, or subsidence would be less than significant. Therefore, the Phase 2 Project would not result in any new or substantially more severe significant impacts related to geology and soils.
Greenhouse Gas Emissions	Consistent. The EIR determined that implementation of the MMHS Specific Plan would not generate significant GHG emissions. Since student capacity, staffing, and other community-related uses on the campus would not increase or change with implementation of the Phase 2 Project, it would not result in an increase in emissions from mobile sources, solid waste generation, water use, or wastewater generation. Construction emissions were determined not to exceed the SCAQMD threshold. The Phase 2 Project similarly will not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. Therefore, the Phase 2 Project would not result in any new or substantially more severe significant impacts related to greenhouse gas emissions.
Hazards and Hazardous Materials	Consistent. The EIR for the MMHS Specific Plan determined that, as an educational use, the project would not involve the routine use of hazardous materials beyond small quantities required for normal maintenance and landscaping activities and would not create any health hazards. The EIR also determined that the project would not involve changes to circulation or site access and would not interfere with emergency plans. The Phase 2 Project would include the same uses as those evaluated in the EIR and would be constructed at the same location. Therefore, the Phase 2 Project would not result in any

TABLE 1 PHASE 2 EIR ANALYSIS

EIR Resource Area	Consistency With Certified EIR Analysis
	new or substantially more severe significant impact related to hazards and hazardous materials. With implementation of fire protection building and design features and compliance with existing current standards, regulations, and code requirements, the Phase 2 Project would not result in a significant risk of loss, injury, or death involving wildland fires.
Hydrology and Water Quality	Consistent. Prior to construction of the Phase 2 Project, the District would be required to prepare and implement site specific BMPs consistent with its Construction General NPDES Permit, Construction SWPPP, and MMC § 13.04.100, which are in place to control sediment and pollution from entering waterways. During operation, the new storm drain system would be designed to accommodate a 50-year storm, and the design would comply with the City's MS4 Permit and Municipal Code Chapter 13.04 (Stormwater Management and Discharge Control). The Phase 2 Project would result in the decommissioning of existing septic systems and sizing and replacement with tie-ins to the new wastewater treatment system infrastructure. The Phase 2 Project would result in a minor increase to impervious surfaces compared to existing conditions and would not result in substantial erosion or siltation on or off-site. The project would install new stormwater retention basins that would be developed to infiltrate and treat runoff from the new buildings and paved areas. As described in the EIR, groundwater levels beneath the campus are 50 to 70 feet below ground surface. Therefore, project construction would have no potential to intercept the underlying aquifer or otherwise alter the direction, rate, or flow of groundwater. Therefore, the Phase 2 Project would not result in any new or substantially more severe significant impacts related to hydrology.
Land Use	Consistent. The Phase 2 Project would continue the existing public educational use for the site. The project would be consistent with the goals and policies identified in the General Plan's Land Use Element, the City's LCP, and the City's Municipal Code that have been adopted for the purposes of avoiding or mitigating environmental impacts. The Specific Plan was developed to establish the development standards and plan for the redevelopment of campus facilities in multiple phases to enhance and modernize facilities and improve campus circulation. With adoption of the Specific Plan, these standards became the regulations against which all phases of campus development, including the Phase 2 Project, would be reviewed by the City. Where the Specific Plan does not identify development standards, development under the Specific Plan is required to conform to all existing development standards under § 17.40.110 of the City's Municipal Code for Institutional Development and § 3.9 of the City's LIP. Therefore, the Phase 2 Project would not result in any new or substantially more severe significant impacts related to land use and planning.
Noise	Consistent. The EIR concluded that the MMHS Specific Plan would potentially increase existing noise levels at the project site during construction even with the implementation of Mitigation Measure N-1. Construction activities would be temporary and would comply with existing City regulations which limit hours of construction to normal working hours and regulate equipment maintenance and use as well as the allowable level of ambient noise (Section 8.24.050 of the City of MMC). Mitigation Measure N-1 will ensure that temporary noise barriers are erected when construction activities would be within the screening distance of 100 feet from the sensitive receptor property line; however, noise levels could exceed the City's construction noise limit and were found to be significant and

TABLE 1 PHASE 2 EIR ANALYSIS

EIR Resource Area	Consistency With Certified EIR Analysis
	unavoidable. Some Phase 2 construction related activities could occur within 100 feet or adjacent residential uses. Operation of the Phase 2 Project would not increase noise levels beyond existing noise levels as there would be no increase in student population and activities would be similar to existing activities. Noise levels during construction may exceed the City of Malibu's noise limits; however, not at a level significantly greater than what was identified in the EIR. Therefore, the Phase 2 Project would not result in any new or substantially more severe significant impacts related to noise.
Public Services	Consistent. The EIR determined that the MMHS Specific Plan would incrementally increase demand for some public services; however, the impact to the associated service providers would be less than significant. The Phase 2 Project would not increase the requirement for fire protection facilities and personnel, would not adversely affect the LACoFD's ability to provide adequate service, and would not require new or expanded police facilities that could result in adverse environmental impacts. Therefore, the Phase 2 Project would not result in any new or substantially more severe impacts related to public services.
Recreation	Consistent. The Phase2 Project includes the construction of improved recreational facilities with the development of the Middle School Gym. The Middle School Gym would serve MMHS students, and the community would be available for public use, as permitted in the 2019 Master Agreement between SMMUSD and the City of Malibu Regarding the Joint Use of School District Facilities. The Phase 2 Project would include enhancements to and expansion of the MMHS recreational facilities and would not result in any new or substantially more severe significant impacts related to recreation.
Transportation	Consistent. The Phase 2 Project would be confined to the MMHS campus and would not construct or modify the surrounding circulation network, including roads transit, bicycle, and pedestrian facilities. Therefore, the Proposed Project would not conflict with any regulations set forth by the City of Malibu's General Plan and/or LCP, nor with a program, plan, ordinance, or policy regarding public transit, roadway, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities. Construction activities would generate a temporary increase in traffic and an increase in Vehicle Miles Traveled (VMT). However, the increase in trips and the subsequent increase in VMT to the MMHS Campus would be temporary and vary with the level of effort necessitated by each phase of construction. During operation, development of the Phase 2 Project would not increase the student or employment population at MMHS, and the attendance boundaries of the school would not change; therefore, the Phase 2 Project would not result in more vehicle trips to and from the school during operation of the project when compared to existing conditions. During Phase 2 construction, the majority of construction traffic during the peak hours would consist of construction workers and vendors traveling to and from the MMHS. In addition, during Phase 2, the newly constructed drop-off and pick-up areas in Parking Lots C and D would be available, and the school would continue to use Parking Lot B and the new Parking Lots D and E that have been constructed during Phase 1. Mitigation measures T-1 and T-3 would be implemented during Phase 2. Once operational, the Phase 2 Project would continue to utilize the new drop-off and pick-up areas, and the new parking lots constructed during the Phase 1 Project. Therefore, the

TABLE 1 PHASE 2 EIR ANALYSIS

EIR Resource Area	Consistency With Certified EIR Analysis
	proposed project revision would not result in any new or substantially more severe significant impacts related to transportation/traffic.
Utilities and Service Systems	Consistent. All utility infrastructure improvements necessary for the implementation of the Phase 2 Project (specifically water, electrical, natural gas, telecommunications) would be developed internal to the Project Site during construction. Additionally, the new structures would be developed with modernized building materials and fixtures meeting current code requirements, resulting in a more efficient use of utilities. Therefore, the Phase 2 Project would not result in any new or substantially more severe significant impacts related to utilities and service systems.
Wildfire	Consistent. The MMHS campus is located within a very high fire hazard severity zone (VHFHSZ) with a high likelihood of exposure to a wildland fire and secondary effects of wildland fires. The Phase 2 Project would not require the installation of new power lines or other off-site utilities, including infrastructure for emergency/fire water lines. The proposed domestic and fire water lines would connect to the existing 12-inch public water main on Morning View Drive, and water would be supplied by the Los Angeles County Waterworks District No. 29. Project construction activities could result in exacerbated fire risks due to sparks, dry vegetation, and weather, particularly in areas where construction activities are in proximity to surrounding open space areas. Given the high potential for wildland fires and associated risks in the project area, construction-related impacts are considered potentially significant. Mitigation Measure W-1 would ensure fire prevention requirements are in place during all phases of construction activities. Mitigation Measure W-1 would reduce potential impacts associated with wildfire risks during construction to a level that is less than significant through implementation of fire prevention measures. Mitigation Measure GEO-1 would require adherence to design recommendations in the final Geotechnical Report for the Phase 2 Project. These recommendations include industry-proven standards to prevent soil erosion and unstable soils. Therefore, the Phase 2 Project would not result in any new or substantially more severe significant impacts related to wildfire risk.

As demonstrated in the preceding analysis, all environmental impacts associated with construction and operation of Phase 2 (the project) were adequately evaluated and mitigated. The standards set forth in State CEQA Guidelines Section 15162 are met, and no further environmental review is required.

NOTICE OF PUBLIC HEARING
CITY OF MALIBU
PLANNING COMMISSION

The Malibu Planning Commission will hold a public hearing on **TUESDAY, January 20, 2026, at 6:30 p.m.** in the Council Chambers, Malibu City Hall, 23825 Stuart Ranch Road, Malibu, CA on the project identified below.

Public comment can be submitted ahead of the public hearing to planningcommission@malibucity.org for inclusion in the public record. To participate during the public hearing, please review the meeting agenda posted at MalibuCity.org/AgendaCenter and follow the directions for public participation.

MALIBU MIDDLE AND HIGH SCHOOL CAMPUS SPECIFIC PLAN

Coastal Development Permit No. 25-032, Site Plan Review No. 25-039, And Demolition Permit No. 25-027 - An application to implement the Malibu Middle and High School Campus (MMHS) Campus Specific Plan (Phases 2, 3a, and 4a) with the construction of a new two-story 18,911 square-foot middle school gym (Building D) and outdoor sports courts, one-story 9,243 square-foot middle school student activity, food service, and special education building with canopy (Building D/I), one-story 333 square foot broadcasting/media arts building, middle school quad and walkways, site improvements, landscaping, on-grade solar installation, grading, and underground utility work, including a site plan review for a height increase over 18 feet, not to exceed 36 feet as allowed in the MMHS Specific Plan and a demolition permit for the demolition of existing classroom Buildings K and I, seven portable classroom buildings, and one portable restroom building

Location:	30215 Morning View Drive
APN:	4469-017-901
Zoning:	Institutional (I) and MMHS Campus Specific Plan Overlay District
Applicant:	LPA, Inc.
Owner:	Santa Monica-Malibu Unified School District (SMMUSD)
Appealable to:	City Council
Application Filed:	August 5, 2025
Case Planner:	Richard Greenbauer, Contract Planner (949) 489-1442, extension 132 greenbauer@civicsolutions.com

In accordance with the California Environmental Quality Act (CEQA) and CEQA Guidelines Section 15051 (State Clearinghouse [SCH] No. 202008350), the SMMUSD Board of Education (Board) adopted a Final Environmental Impact Report (EIR) for the MMHS Campus Specific Plan on January 26, 2022, which included all phases of development including the scope of work proposed in CDP No. 25-032. The EIR identified potential significant environmental impacts from the MMHS Campus Specific Plan but found that mitigation measures would reduce most impacts to less-than-significant levels. A Mitigation Monitoring and Reporting Program (MMRP) was adopted for the project. The EIR also identified significant and unavoidable impacts on aesthetics (light and glare) and noise (sensitive receptors). The Board weighed the benefits of the project against the unavoidable impacts and determined that the benefits outweigh them. A Statement of Overriding Considerations (SOC) was adopted as part of the Final EIR. The Board, acting as the lead agency for the proposed project, consulted with responsible agencies, including the City, during the preparation of the EIR. On July 11, 2022, the City Council adopted Resolution No. 22-32 certifying the adequacy of the Final EIR. The Final EIR, MMRP, SOC, and accompanying materials are available on the City's website

at: https://www.malibucity.org/397/Malibu-Middle-High-School-Improvements.

As the decision-making body for Coastal Development Permit No. 25-032, the City must review and consider the Final EIR before acting upon or approving the proposed Project. Pursuant to CEQA Guidelines Section 15162 and 15163, and based on the review of the entire record, including without limitation, the Final EIR, the Community Development Director finds that the proposed Project does not require further environmental review as: 1) no substantial changes are proposed to the Project and no substantial changes have occurred that require major revisions to the Final EIR due to the involvement of new significant environmental effects or an increase in severity of previously identified significant effects; and 2) no new information of substantial important has come to light that (a) shows the Project will have one or more significant effects not discussed in the Final EIR, (b) identifies significant impacts would not be more severe than those analyzed in the Final EIR, (c) shows that mitigation measures or alternatives are now feasible that were identified as infeasible and those mitigation measures or alternatives would reduce significant impacts, and (d) no changes or mitigation measures or alternatives have been identified or required. Pursuant to CEQA Guidelines Sections 15050(c), 15162(b), and 15163, the Community Development Director finds and recommends that no further environmental analysis or environmental documentation is necessary. Accordingly, the proposed Project is merely a step in furtherance of the MMHS Campus Specific Plan for which environmental review was performed and adopted by the Board. The Board further found that no supplemental or subsequent CEQA has been triggered by the proposed Project requiring additional environmental review.

A written staff report will be available at or before the hearing for the project. All persons wishing to address the Commission regarding this matter will be afforded an opportunity in accordance with the Commission's procedures.

Copies of all related documents can be reviewed by any interested person at City Hall during regular business hours. Oral and written comments may be presented to the Planning Commission on, or before, the date of the meeting.

LOCAL APPEAL – A decision of the Planning Commission may be appealed to the City Council by an aggrieved person by written statement setting forth the grounds for appeal. An appeal shall be filed with the City Clerk within ten days following the date of action (15 days for tentative maps) for which the appeal is made and shall be accompanied by an appeal form and filing fee, as specified by the City Council. Appeal forms may be found online at www.malibucity.org/planningforms or in person at City Hall, or by calling (310) 456-2489, extension 246.

IF YOU CHALLENGE THE CITY'S ACTION IN COURT, YOU MAY BE LIMITED TO RAISING ONLY THOSE ISSUES YOU OR SOMEONE ELSE RAISED AT THE PUBLIC HEARING DESCRIBED IN THIS NOTICE, OR IN WRITTEN CORRESPONDENCE DELIVERED TO THE CITY, AT OR PRIOR TO THE PUBLIC HEARING.

Date prepared: January 8, 2026 Meeting date: January 20, 2026

Subject: Zoning Text Amendment No. 25-003 – A revised amendment incorporating new state law and clarifications to Title 17 (Zoning) of the Malibu Municipal Code to update regulations related to Accessory Dwelling Units

Applicant: City of Malibu
Location: Citywide

RECOMMENDED ACTION: Adopt Planning Commission Resolution No. 26-03 (Attachment 1) recommending that the City Council approve revised Zoning Text Amendment (ZTA) No. 25-003, an amendment to Title 17 (Zoning) of the Malibu Municipal Code (MMC) to update regulations related to Accessory Dwelling Units (ADU) and Junior ADUs (JADU).

DISCUSSION: The item before the Planning Commission is a recommendation to the City Council on amendments to the City's ADU ordinance in MMC Chapter 17.44. The draft ordinance was previously reviewed by the Commission on August 18, 2025. However, it was not yet adopted by the City Council. Since that hearing, staff identified additional State ADU/JADU law that has taken effect or will take effect in 2026.[1] The proposed ordinance before the Commission is a consolidated amendment that implements recommendations provided by the California Department of Housing and Community Development (HCD)

[1] AB 462 (urgency measure, effective upon signature in 2025), AB 1154 (effective January 1, 2026), SB 9 (2025) and SB 543 (effective January 1, 2026), and SB 1211 (effective January 1, 2025) each amend portions of State ADU/JADU law implemented by this ordinance.

and updates to MMC Chapter 17.44 reflecting the latest State ADU/JADU statutes. The ordinance is presented as Exhibit A to Attachment 1, and Exhibit A-1 contains the full amended text of Chapter 17.44 of the Malibu Municipal Code and constitutes the operative ordinance text recommended for adoption. Attachment 2 provides a redline version of Chapter 17.44 for reference, illustrating all proposed amendments. Blue text reflects changes made after the August 18, 2025 Planning Commission meeting, and red text reflects revisions recommended by the Planning Commission at that meeting.

The proposed ordinance responds to a letter issued by HCD on November 13, 2024, regarding the City's prior ADU ordinance amending the MMC (Ordinance No. 511) and reflects recent changes to State ADU/JADU law.[2] HCD found that the City would need to revise its ordinance to include mandatory statutory corrections and interpretive clarifications reflecting HCD's current implementation of ADU law statewide. The proposed ordinance includes the Commission's recommendations from its August 18, 2025, hearing related to the 20-foot street-width and the relationship between the Local Coastal Program (LCP) and MMC when applied to ADUs.

Existing ADU Ordinance and Prior Planning Commission Meetings

On January 8, 2024, the City Council adopted Ordinance Nos. 510 and 511, which updated second-unit regulations and established the ADU/JADU framework in the LCP (Ordinance No. 510) and the MMC (Ordinance No. 511). The LCP amendments (LCPA) were transmitted to the California Coastal Commission (CCC) on March 19, 2024 for processing and CCC staff continues to work toward certification. While the LCPA remains pending, staff is requesting the City Council adopt an updated ordinance to amend Title 17 (Zoning) of the MMC. The proposed ordinance would replace Ordinance No. 511. This effort is anticipated to be considered by the Planning Commission and City Council in 2026.

Pursuant to Government Code Section 66326, Ordinance No. 511 (MMC) was transmitted to HCD for review on January 8, 2024. On November 13, 2024, HCD issued a written findings letter specifying ten issues requiring amendment or clarification (Attachment 3). The issues cited outdated Government Code references, the 20-foot ingress/egress standard, a prohibition on attached ADUs on multifamily lots, the treatment of the LCP, processing timelines, separate-sale and deed-restriction language, unit size and height

[2] Under Government Code section 66326, jurisdictions are required to submit adopted ADU ordinances to HCD within 60 days of adoption, and HCD has statutory authority to review local ADU ordinances and issue findings letters regarding consistency with State ADU law. State law requires jurisdictions either to amend their ordinance to address HCD's findings or to adopt findings explaining why they believe their ordinance complies despite HCD's comments. Objective 1.e in the City's Housing Element also provides that the ADU ordinance must be updated within six months of receipt of comments from HCD or within six months of adoption of the Housing Element, whichever occurs later.

limits, and a parking cross-reference. Staff has coordinated with HCD over the past year to revise the ordinance consistent with these findings.

State ADU Law Changes

Since Ordinance Nos. 510 (LCP) and 511 (MMC) were adopted, several bills have further amended State ADU/JADU law. Some of the provisions of these bills were not in the City's ordinances but are included in the proposed ordinance and are summarized below. Any changes related to the LCP will be discussed at a later time.

- **AB 462** requires Coastal Development Permits (CDPs) for ADUs to be processed on the same 60-day timeline as the ADU, eliminates appeals of ADU CDPs to the CCC, and provides a narrow exception allowing certificates of occupancy for detached ADUs to be issued before the primary dwelling in certain disaster-related circumstances.

- **AB 1154** revises JADU owner-occupancy standards so that an owner must reside on the property only when the JADU shares sanitation facilities with the primary dwelling, and codifies the prohibition on JADUs from being used for short-term rentals of less than 30 days.

- **SB 9 (2025)** strengthens HCD's oversight of local ADU ordinances by authorizing HCD to invalidate non-compliant ordinances and default jurisdictions to State ADU standards until they implement remedial measures.

- **SB 543** clarifies that ADU/JADU size must be measured as *interior livable space*, aligns fee exemptions with these size definitions, and extends certain ADU enforcement and nullification provisions to JADUs.

- **SB 1211** increases the number of detached ADUs permitted on lots with an existing multifamily dwelling from two to up to eight detached ADUs (provided the number of detached ADUs does not exceed the number of primary dwelling units on the lot) and prohibits requiring replacement of certain uncovered off-street parking spaces when converted for ADUs.

More detailed descriptions of these laws are provided in Attachment 4. The proposed ordinance addresses these statutory changes and incorporates revisions in alignment with recommendations from the City Attorney and HCD.

Summary of Proposed Amendments

The proposed amendments are summarized below and categorized by section. Any changes made since the August 18, 2025 meeting are noted. The Commission may

recommend the City Council revise the draft ordinance, provided that the revisions comply with State law and are not more restrictive than State law allows.

MMC §17.44.040 – Definitions

The definitions section is updated to add and refine terms such as “accessory structure,” “livable space,” “living area,” “public transit,” and “very high fire hazard severity zone.” Several definitions were added verbatim from State law.

- *Proposed Changes Since the August 18, 2025 Meeting:* The JADU definition is revised to clarify that the 500-square-foot limit is based on interior livable space (per SB 543) and further clarification related to the internal connection to the main residence and sanitation.

MMC §17.44.050 – Permitted Locations

This section clarifies that ADUs are allowed on multifamily lots consistent with the State’s categories for converted and detached units and removes the prior prohibition on attached multifamily ADUs (due to inconsistency with State law).

The primary amendment to this section relates to the 20-foot street-width standard for ingress and egress. This requirement has historically been included in the City’s ADU ordinance. This is because the entire City of Malibu is located within a Very High Fire Hazard Severity Zone (VHFHSZ) and the City has a history of large, destructive wildfires resulting in significant property damage and loss of life. At its August 18, 2025 meeting, the Commission recommended adding the clause “except as required by State law” to ensure that the 20-foot standard does not operate as a blanket prohibition in situations where State ADU law mandates approval of an ADU.

HCD has consistently taken the position across California jurisdictions that a fixed minimum roadway width cannot be applied in a manner that precludes ADUs in otherwise eligible residential areas. HCD has maintained that position for Malibu’s ordinance and has not accepted the current language. In response, staff has worked with HCD to clarify the City’s fire-safety concerns and the operational reasons for the 20-foot standard. As part of this effort, staff evaluated the extent of parcels potentially affected by the requirement. All public roads in Malibu are at least 20 feet wide, meaning that the 20-foot requirement would only apply to properties served by narrower private roads. Approximately 334 residential units (or roughly six percent of the City’s housing stock) are located on narrow private roads.

- *Proposed Changes Since the August 18, 2025 Meeting:* The draft retains the phrase “except as required by State law” so the 20-foot minimum street-width standard for emergency access is not applied in a way that would block ADUs in cases where State

law requires approval. HCD has advised staff that this exception may still be too general and could be interpreted as limiting ADUs more than State law allows. The Planning Commission can either (1) keep the current language, understanding HCD may reject the ordinance, or (2) direct staff to revise the provision to more clearly reflect the fire and emergency requirements that support the 20-foot standard, and plainly state that roadway width alone will not be used to deny an ADU that must be approved under State law.

MMC §17.44.060 – Approvals (Class 1 and Class 2 ADUs)

This section reorganizes the approval structure into two ministerial categories. Class 1 "Statutorily Regulated" ADUs and JADUs correspond to the State-mandated scenarios, including one internal conversion ADU or JADU and one detached ADU on single-family lots and both converted and detached ADUs on multifamily lots. In all cases, compliant ADUs and JADUs are processed ministerially through an ADU permit (which replaces the prior discretionary Administrative Plan Review (APR) model for ADUs) and a building permit. Consistent with SB 1211, lots with an existing multifamily dwelling can have up to eight detached ADUs, or as many detached ADUs as there are primary dwelling units on the lot, whichever is less. The section also clarifies that applications are reviewed for compliance with both the MMC and the LCP and confirms that, if an ADU application is exempt from the need to obtain a CDP, then only the MMC would apply. Class 2 "Locally Regulated" ADUs encompass additional ADU configurations authorized by the City within the State's framework. Both the Class 1 and Class 2 category updates were recommended for adoption by the Planning Commission at the August 18, 2025 meeting. New proposed changes for State law consistency are explained below.

- *Proposed Changes Since the August 18, 2025 Meeting:* Allowable ADU combinations are updated pursuant to SB 543. For single-family lots, an ADU conversion and JADU may be combined with one detached ADU. For multifamily lots, detached ADUs can be combined with converted ADUs, subject to existing unit-count limits.

MMC §17.44.070 – Process and Timing

The section replaces the prior requirement to "act on" an application with the statutory requirement to "approve or deny" a complete application within 60 days, with applications deemed approved if the City does not act and no statutory exception applies.

- *Proposed Changes Since the August 18, 2025 Meeting:* For consistency with SB 543, new language was added to reflect that the City must determine completeness of ADU applications within 15 business days, provide a written list of any missing items, and limit subsequent requests to those items. Resubmittals are reviewed within another 15 business days, and applications are deemed complete if the City does not respond

within the deadline. Applicants may appeal completeness determinations and denials to the Commission, which must issue a final written decision within 60 business days.

MMC §17.44.080 – General ADU and JADU Requirements

This section clarifies zoning eligibility for Class 1 and Class 2 ADUs and confirms that JADUs may be created only on lots zoned for single-family residences. Deed restriction provisions are narrowed by removing certain conditions. HCD flagged these deed restrictions as inconsistent with State law. These provisions are focused on recorded covenants on new changes to State-defined terms, including for JADUs.

- *Proposed Changes Since the August 18, 2025 Meeting:* The section adds JADU owner-occupancy exceptions consistent with AB 1154, including exceptions when the JADU has separate sanitation from the single-family residence or the property is owned by a public agency, land trust, or housing organization. To maintain consistency with the City's existing floor area limits (referred to as Total Development Square Footage or TDSF), the proposed ordinance introduces a 38 percent Floor Area Ratio (FAR) for ADUs on lots subject to the City's ADU standards. However, this FAR limit could not be used to deny a minimum 800-square-foot ADU allowed by State law (Class 1 ADUs).

Under AB 462, a certificate of occupancy for a detached ADU may be issued before a certificate of occupancy for the primary dwelling if specific requirements are met, including the primary dwelling was substantially damaged or destroyed by an event referenced in the Governor's state of emergency proclamation.

MMC §17.44.090 – Specific Requirements for Class 2 ADUs

This section applies only to Class 2 (locally regulated) ADUs. For MMC §17.44.090(A)(1) regarding maximum allowed floor area, staff is recommending the removal of the language regarding how floor area is calculated to avoid confusion since those requirements are found elsewhere in the MMC including MMC §17.44.090(A)(2) and (3) that were amended to ensure, pursuant to State law, that a minimum 800-square-foot attached ADU would be allowed regardless of any other regulations related to the size of the residence.

This section has also been updated to add standards for lot coverage as state law allows jurisdictions to regulate the size of ADUs beyond the 800-square-foot minimum, based on lot coverage and open space. The City has existing lot coverage standards in the form of "impermeable coverage" which have been added to the ADU ordinance. The lot coverage criteria for ADUs will be consistent with what is required for impermeable coverage elsewhere in the MMC.

- *Proposed Changes Since the August 18, 2025 Meeting:* Consistent with current ADU statutes, the ordinance maintains a 1,000-square-foot maximum floor area but clarifies that attached ADUs may be *allowed* at least 800 square feet of interior livable space, regardless of percentage-based limits or FAR/lot-coverage standards. It specifies the state-law allowance for the reconstruction of an ADU in the footprint of a legally demolished accessory structure. The section further clarifies that required parking is one space per ADU or per bedroom, whichever is less, and specifies that replacement parking may not be required when covered or uncovered parking spaces are converted or demolished to create an ADU.

MMC §17.44.100 – Fees and Utilities

- *Proposed Changes Since the August 18, 2025 Meeting:* Per SB 543, the fee section now clarifies that ADUs and JADUs under 500 square feet of interior livable space do not increase assessable area for school impact fee purposes. Utility-connection provisions are reorganized to specify when separate connections and capacity charges may be required and to ensure that any such charges are proportionate to the additional burden created by the ADU and do not exceed the reasonable cost of service.

General Cleanup

In addition to responding to the items in the HCD comment letter and recent State law, the draft ordinance includes clarifying text consistent with recommendations from the City Attorney and HCD. Examples include references to State statutes such as the reorganized ADU laws and internal cross-references.

ENVIRONMENTAL REVIEW: The project is exempt from the requirements of CEQA pursuant to Public Resources Code Section 21080.17, which states that CEQA does not apply to the adoption of local ordinances regulating the construction of second units and by CEQA Guidelines Section 15282(h) that exempts adoption of an ordinance regarding second units in single-family and multifamily residential zones.

Furthermore, the Community Development Director has analyzed the proposed amendments. CEQA applies only to projects which have the potential for causing a significant effect on the environment. Pursuant to CEQA Guidelines Section 15061(b)(3), where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA. The Community Development Director determined that the proposed amendments are required by state law and will not result in changes from existing development standards, such as density limits and environmental resource protection standards; consequently,

there is no possibility the amendment will have a significant effect on the environment and accordingly the exemption set forth in Section 15061(b)(3) applies.

PUBLIC NOTICE: Notice for this item was provided in accordance with City policies and the Brown Act. The City published a Notice of Public Hearing in a newspaper of general circulation within the City of Malibu on December 25, 2025 (Attachment 5). Additionally, the interested parties lists for ADUs and Zoning Text Amendments were sent a courtesy email with the date of the agendized Planning Commission item and instructions for participation. The City's ADU webpage (www.malibucity.org/adu) was also updated with notification of this meeting. As of the writing of the report, staff has not received public comments.

SUMMARY AND NEXT STEPS: It is recommended that the Planning Commission adopt Resolution No. 26-03 recommending the City Council adopt the proposed Zoning Text Amendment modifying ADU regulations within MMC Chapter 17.44. Following City Council adoption, the ordinance will be transmitted to HCD for its required review. If HCD provides additional comments, staff will work with the agency to address the comments consistent with State law and the City's Housing Element obligations. As part of the City's Housing Element Implementation Program, staff will continue work on Program 4.1. (Support Development of Accessory Dwelling Units), including creating a preapproved program ("plans off-the-shelf"), monitoring trends, and implementing additional actions if ADU production is lacking. Notably, the City issued permits for five new ADUs in 2025, a pace on track with the Housing Element's projections of 28 ADUs over the 2021–2029 cycle.

CITY OF MALIBU PLANNING COMMISSION
RESOLUTION NO. 26-03

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MALIBU RECOMMENDING THAT THE CITY COUNCIL APPROVE ZONING TEXT AMENDMENT NO. 25-003, AN AMENDMENT TO TITLE 17 (ZONING) OF THE MALIBU MUNICIPAL CODE TO UPDATE ACCESSORY DWELLING UNIT REGULATIONS TO UPDATE REGULATIONS RELATED TO ACCESSORY DWELLING UNITS AND JUNIOR ACCESSORY DWELLING UNITS

The Planning Commission of the City of Malibu does hereby find, order and resolve as follows:

SECTION 1. Recitals.

A. On January 8, 2024, the City transmitted Ordinance No. 511 to the California Department of Housing and Community Development (HCD) for review pursuant to Government Code section 66326.

B. On November 13, 2024, HCD issued a written findings letter identifying required amendments and clarifications to ensure consistency with State Accessory Dwelling Unit (ADU) and Junior Accessory Dwelling Unit (JADU) law.

C. On July 24, 2025, a Notice of Planning Commission Public Hearing was published in a newspaper of general circulation within the City of Malibu regarding Zoning Text Amendment (ZTA) No. 25-003.

D. On August 11, 2025, the City Council adopted Resolution No. 25-41 to: 1) initiate ZTA No. 25-003 to update accessory dwelling unit regulations consistent with State law, and 2) direct the Planning Commission to schedule a public hearing regarding the ZTA and provide a recommendation to the Council whether to approve, modify, or reject the amendment.

E. On August 18, 2025, the Planning Commission held a duly noticed public hearing on ZTA No. 25-003 and reviewed the agenda report, written materials, public testimony, and all evidence in the record.

F. To remain valid and enforceable, the City's ADU ordinance must be updated to reflect the most recent changes to State ADU and JADU law.

G. Since the August 18, 2025 hearing, ZTA No. 25-003 was not adopted so that the City could revise the amendment to reflect additional State ADU and JADU legislation has taken effect or will take effect through 2026, including, but not limited to, Assembly Bill (AB) 462, AB 1154, Senate Bill (SB) 9 (2025), SB 543, and SB 1211.

H. On December 25, 2026, a Notice of Planning Commission Public Hearing was published in a newspaper of general circulation within the City of Malibu regarding the revised ZTA No. 25-003.

I. On January 20, 2026, the Planning Commission held a duly noticed public hearing on the revised draft of ZTA No. 25-003 incorporating new state law and clarifications; and

reviewed the agenda report, written materials, public testimony, and all evidence in the record.

J. The proposed amendments are necessary to implement recent changes to State law and to address HCD's November 13, 2024 findings letter pursuant to Government Code section 66326.

K. The proposed amendments are consistent with the goals, objectives, and policies of the City's General Plan and Housing Element Program 4.1 (Support Development of Accessory Dwelling Units), and corresponding amendments to the Local Coastal Program will be processed separately for Coastal Commission certification.

SECTION 2. Environmental Review.

The project is exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Public Resources Code Section 21080.17, which states that CEQA does not apply to the adoption of local ordinances regulating the construction of second units and by CEQA Guidelines Section 15282(h) that exempts adoption of an ordinance regarding second units in single-family and multifamily residential zones.

Furthermore, the Community Development Director has analyzed the proposed amendments. CEQA applies only to projects which have the potential for causing a significant effect on the environment. Pursuant to CEQA Guidelines Section 15061(b)(3), where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA. The Community Development Director determined that the proposed amendments are required by State law and will not result in changes from existing development standards, such as density limits and environmental resource protection standards; consequently, there is no possibility the amendment will have a significant effect on the environment and accordingly, and the exemption set forth in Section 15061(b)(3) applies.

SECTION 3. Zoning Text Amendment Findings.

Pursuant to Malibu Municipal Code (MMC) Section 17.74.040, the Planning Commission hereby makes the following findings and recommends to the City Council that the MMC be amended as stated in Exhibit A of this resolution.

A. The subject ZTA is consistent with the objectives, policies, general land uses and programs specified in the General Plan. The proposed amendment serves to enhance the Malibu General Plan Mission Statement, protect public safety and preserve Malibu's natural and cultural resources. Specifically, it fulfills programs specified in Housing Element Goal 1 (Adequate Housing for the Existing and Projected Needs of All Economic Segments of the Community), and Housing Element Program 4.1 (Support Development of Accessory Dwelling Units) and Objective 1.e (timely updates to the ADU ordinance to maintain compliance with State law). In addition, adoption of the Ordinance is consistent with the General Plan as a matter of law under Government Code section 66314(c).

B. The Planning Commission held a public hearing, reviewed the subject ZTA for compliance with the City of Malibu General Plan, Malibu Municipal Code and the Malibu Local Coastal Program, and finds that the ZTA is consistent and recommends approval.

SECTION 4. Planning Commission Action.

Based on the above findings, the Planning Commission hereby recommends that the City Council approve the Zoning Ordinance Amendments detailed in Exhibit "A".

SECTION 5. The Planning Commission shall certify the adoption of this Resolution.

PASSED, APPROVED AND ADOPTED this 20th day of January, 2026.

ELIZABETH RIDDICK, Planning Commission Chair

ATTEST:

REBECCA EVANS, Recording Secretary

I CERTIFY THAT THE FOREGOING RESOLUTION NO. 26-03 was passed and adopted by the Planning Commission of the City of Malibu at the Regular meeting thereof held on the 20th day of January, 2026, by the following vote:

AYES:
NOES:
ABSTAIN:
ABSENT:

REBECCA EVANS, Recording Secretary

Exhibit A: Draft Ordinance

ORDINANCE NO. XXX

AN ORDINANCE OF THE CITY OF MALIBU APPROVING ZONING TEXT AMENDMENT NO. 25-003 AN AMENDMENT TO TITLE 17 (ZONING) OF THE MALIBU MUNICIPAL CODE TO UPDATE ACCESSORY DWELLING UNIT REGULATIONS AND DETERMINING THE AMENDMENTS ARE EXEMPT FROM THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

The City Council of the City of Malibu does ordain as follows.

SECTION 1. Recitals.

A. State law authorizes cities to act by ordinance to provide for the creation and regulation of accessory dwelling units ("ADUs") and junior accessory dwelling units ("JADUs").

B. On January 8, 2024, the City transmitted Ordinance No. 511 to the California Department of Housing and Community Development (HCD) for review pursuant to Government Code section 66326.

C. On November 13, 2024, HCD issued a written findings letter identifying required amendments and clarifications to ensure consistency with State ADU and JADU law.

D. On August 11, 2025, the City Council adopted Resolution No. 25-41 to: 1) initiate Zoning Text Amendment (ZTA) No. 25-003 to update accessory dwelling unit regulations consistent with State law, and 2) direct the Planning Commission to schedule a public hearing regarding the ZTA and provide a recommendation to the Council whether to approve, modify, or reject the amendment.

E. On August 18, 2025, the Planning Commission held a duly noticed public hearing on the proposed ADU amendments on ZTA No. 25-003, reviewed and considered the agenda report, reviewed and considered written reports, public testimony, and other information on the record and recommended approval of the amendments with some modifications.

F. To remain valid and enforceable, the City's ADU ordinance must be updated to reflect the most recent changes to State ADU and JADU law.

G. Since the August 18, 2025 hearing, ZTA No. 25-003 was not adopted so that the City could revise the amendment to incorporate additional State ADU and JADU legislation has taken effect or will take effect through 2026, including, but not limited to, Assembly Bill (AB) 462, AB 1154, Senate Bill (SB) 9 (2025), SB 543, and SB 1211.

H. On January 20, 2026, the Planning Commission held a duly noticed public hearing on the revised draft of ZTA No. 25-003 incorporating new state law and clarifications; and reviewed the agenda report, written materials, public testimony, and all evidence in the record.

I. On _____, 2026, a Notice of City Council Public Hearing was published in a newspaper of general circulation within the City of Malibu and mailed to interested parties.

J. On _____, 2026, the City Council held a duly noticed public hearing on the proposed ZTA No 25-003, reviewed and considered the agenda report, reviewed and considered written reports, public testimony, and other information on the record.

SECTION 2. Environmental Review.

The project is exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Public Resources Code Section 21080.17, which states that CEQA does not apply to the adoption of local ordinances regulating the construction of second units and by CEQA Guidelines Section 15282(h) that exempts adoption of an ordinance regarding second units in single-family and multifamily residential zones.

Furthermore, the Community Development Director has analyzed the proposed amendments. CEQA applies only to projects which have the potential for causing a significant effect on the environment. Pursuant to CEQA Guidelines Section 15061(b)(3), where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA. The Community Development Director determined that the proposed amendments are required by State law and will not result in changes from existing development standards, such as density limits and environmental resource protection standards; consequently, there is no possibility the amendment will have a significant effect on the environment and accordingly, and the exemption set forth in Section 15061(b)(3) applies.

SECTION 3. Zoning Text Amendment Findings.

Pursuant to Malibu Municipal Code Section 17.74.040, the City Council hereby makes the following findings:

A. The subject ZTA is consistent with the objectives, policies, general land uses and programs specified in the General Plan. The proposed amendment serves to enhance the Malibu General Plan Mission Statement, protect public safety and preserve Malibu's natural and cultural resources. Specifically, it fulfills programs specified in Housing Element Goal 1 (Adequate Housing for the Existing and Projected Needs of All Economic Segments of the Community), and Housing Element Program 4.1 (Support Development of Accessory Dwelling Units) and Objective 1.e (timely updates to the ADU ordinance to maintain compliance with State law). In addition, adoption of the Ordinance is consistent with the General Plan as a matter of law under Government Code section 66314(c).

B. The City Council held a public hearing, reviewed the subject ZTA for compliance with the City of Malibu General Plan, Malibu Municipal Code and the Malibu Local Coastal Program, and finds that the ZTA is consistent and recommends approval.

SECTION 4. Zoning Text Amendment No. 25-003, Amendments to the Malibu Municipal Code (MMC).

The City Council hereby amends Title 17 - Zoning in the MMC as follows:

A. Chapter 17.44 is amended in its entirety as shown in Exhibit A, attached hereto and incorporated herein by reference.

SECTION 5. HCD Submittal.

In accordance with Government Code sections 66326 and 66333.5, the City Clerk is directed to submit a copy of this Ordinance to the California Department of Housing and Community Development within 60 days after adoption.

SECTION 5. Effective Date.

In accordance with California Government Code section 36937, this Ordinance shall become effective on the 30th day following its passage and adoption.

SECTION 6. Severability.

Should any section, subsection, clause, or provision of this Ordinance for any reason be held to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect the validity or constitutionality or the remaining portions of this Ordinance; it being hereby expressly declared and this Ordinance, and each section, subsection, sentence, clause, and phrase hereof would have been prepared, proposed, approved, and ratified irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phases be declared invalid or unconstitutional.

SECTION 7. Certification.

The City Clerk shall certify to the passage and adoption of this Ordinance.

PASSED, APPROVED, and ADOPTED this _____ day of _____ 2026.

Exhibit A-1: Zoning Text Amendments to Chapter 17.44 of the Zoning Code (Accessory Dwelling Units)

EXHIBIT A-1

Zoning Text Amendments to Chapter 17.44 of the Zoning Code

(ACCESSORY DWELLING UNITS)

CHAPTER 17.44

ACCESSORY DWELLING UNITS

§ 17.44.010. Title.

This chapter shall be known as the "Malibu Accessory Dwelling Unit Ordinance."

§ 17.44.020. Purpose.

The purpose of this chapter is to allow and regulate accessory dwelling units (ADUs) and junior accessory dwelling units (JADUs) in compliance with Chapter 13 of Division 1 of Title 7 of the California Government Code. The entire city of Malibu is located in a designated “Very High Fire Hazard Severity Zone,” and this chapter ensures that ADUs and JADUs are developed and operated on adequate sites, at proper and desirable locations, and that the goals and objectives of the general plan are observed.

§ 17.44.030. Effect of conforming.

An ADU or JADU that conforms to the standards in this chapter will be:

A. Deemed to be consistent with the city's general plan and zoning designation for the lot on which the ADU or JADU is located.

B. Deemed not to exceed the allowable density for the lot on which the ADU or JADU is located.

C. Considered not to be subject to the application of any local ordinance, policy, or program to limit residential growth.

D. Approved without requiring the correction of a nonconforming zoning condition. This does not prevent the city from enforcing compliance with applicable building standards in accordance with Health and Safety Code Section 17980.12. For purposes of this chapter, "nonconforming zoning condition" means a physical improvement on a property that does not conform with current zoning standards.

§ 17.44.040. Definitions.

A. "Accessory dwelling unit" means an attached or a detached residential dwelling unit that provides complete independent living facilities for one or more persons and is located on a lot with a proposed or existing primary residence. An accessory dwelling unit also includes the following:

    1. An efficiency unit, as defined by Section 17958.1 of the California Health and Safety Code; and

    2. A manufactured home, as defined by Section 18007 of the California Health

and Safety Code.

B. “Accessory structure” means a structure that is accessory and incidental to a dwelling located on the same lot.

C. “Complete independent living facilities” means permanent provisions for living, sleeping, eating, cooking, and sanitation on the same parcel as the single-family or multifamily dwelling is or will be situated.

D. "Efficiency kitchen" means a kitchen that satisfies all of the following:

1. A cooking facility with appliances;

2. A food preparation counter and storage cabinets that are of a reasonable size in relation to the size of the JADU.

E. "Junior accessory dwelling unit" means a residential unit that

1. Is no more than 500 square feet of interior livable space in size;

2. Is contained entirely within an existing or proposed single-family structure; an enclosed use within the residence, such as an attached garage, is considered to be a part of and contained within the single-family structure;

3. Has an independent exterior entrance, apart from that of the primary dwelling;

4. Either includes its own separate sanitation facilities or shares sanitation facilities with the existing or proposed single-family structure, and if the latter, the JADU includes an interior entrance to the main living area of the existing or proposed single-family structure in addition to the exterior entrance to the JADU; and

5. Includes an efficiency kitchen, as defined in this subsection D.

F. “Livable space” means a space in a dwelling intended for human habitation, including living, sleeping, eating, cooking, or sanitation.

G. “Living area” means the interior habitable area of a dwelling unit, including basements and attics, but does not include a garage or any accessory structure.

H. "Passageway" means a pathway that is unobstructed clear to the sky and extends from a street to one entrance of the accessory dwelling unit or junior accessory dwelling unit.

I. "Proposed dwelling" means a dwelling that is the subject of a permit application and that meets the requirements for permitting.

J. "Public transit" means a location, including, but not limited to, a bus stop or train station, where the public may access buses, trains, or subways and other forms of transportation that charge set fares, run on fixed routes, and are available to the public.

K. "Tandem parking" means that two or more automobiles are parked on a driveway or in

any other location on a lot, lined up behind one another.

L. "Very high fire hazard severity zone" means zone as defined by Government Code Section 51177 and designated by Ordinance No. 299 and the City's adopted Local Responsibility Area Fire Hazard Severity Zone Maps, as may be amended from time to time.

§ 17.44.050. Permitted locations.

A. ADUs and JADUs under Section 17.44.060(A) are allowed on lots that are in a residential or mixed-use zone.

B. ADUs under Section 17.44.060(B) are allowed on lots zoned to allow single-family or multifamily dwelling residential use.

C. Areas with Adequate Ingress and Egress. Since the entire city is located in a designated "Very High Fire Hazard Severity Zone," consistent with Los Angeles County Fire Department requirements to ensure adequate ingress and egress for fire safety, except as required by state law, a minimum street width of 20 feet shall be required. ADUs are not allowed on parcels that do not have ingress and egress to a street at least 20 feet in width.

§ 17.44.060. Approvals.

The following approvals apply to ADUs and JADUs developed under this chapter. Because the city of Malibu lies entirely within the Coastal Zone, ADU applications may be subject to the requirements in the Local Coastal Program (LCP) in addition to the provisions of this chapter. If an ADU application is exempt from the need to obtain a coastal development permit, then only this chapter governs.

A. Class 1: Statutorily Regulated. Class 1 ADUs and JADUs are approved under Government Code Section 66323. If an ADU or JADU complies with each of the general requirements in Section 17.44.080 below, it is allowed subject to an ADU permit and a building permit in the following scenarios provided in this subsection (A). An ADU and JADU approved under subsection (A)(1) may be combined with an ADU approved under subsection (A)(2), and ADUs approved under subsection (A)(3) may be combined with ADUs approved under subsection (A)(4).

    1. Converted on a Lot with Single-Family. One ADU as described in this subsection (A)(1) and one JADU on a lot with a proposed or existing single-family dwelling on it, where the ADU or JADU:

        a. Is either: within the space of a proposed single-family dwelling; within the existing space of an existing single-family dwelling; or (in the case of an ADU only) within the existing space of an accessory structure, plus up to 150 additional square feet if the expansion is limited to accommodating ingress and egress; and

b. Has exterior access that is independent of that for the single-family dwelling; and

c. Has side and rear setbacks sufficient for fire and safety, as dictated by applicable building and fire codes.

d. The JADU complies with the requirements of Government Code Sections 66333 through 66339.

2. Limited Detached on a Lot with Single-Family. One detached, new-construction ADU on a lot with a proposed or existing single-family dwelling (in addition to any JADU that might otherwise be established on the lot under subsection (A)(1) above if the detached ADU satisfies each of the following limitations:

a. The side- and rear-yard setbacks are at least four feet.

b. The total floor area is 800 square feet or smaller.

c. The peak height above grade does not exceed the applicable height limit in subsection 17.44.080(K) below.

3. Converted on a Lot with Multifamily. One or more ADUs within portions of existing multifamily dwelling structures that are not used as livable space, including, but not limited to, storage rooms, boiler rooms, passageways, attics, basements, or garages, if each converted ADU complies with state building standards for dwellings. Under this subsection (A)(3) at least one converted ADU is allowed within an existing multifamily dwelling, up to a quantity equal to 25 percent of the existing multifamily dwelling units.

4. Limited Detached on a Lot with Multifamily. No more than two detached ADUs on a lot that has a proposed multifamily dwelling, or up to eight detached ADUs on a lot with an existing multifamily dwelling, if each detached ADU satisfies both of the following limitations:

a. The side- and rear-yard setbacks are at least four feet. If the existing multifamily dwelling has a rear or side yard setback of less than four feet, the city will not require any modification to the multifamily dwelling as a condition of approving the ADU.

b. The peak height above grade does not exceed the applicable height limit provided in subsection 17.44.080(K) below.

c. If the lot has an existing multifamily dwelling, the quantity of detached ADUs does not exceed the number of primary dwelling units on the lot.

B. Class 2: Locally Regulated. Class 2 ADUs are approved under Government Code sections 66314–66322.

1. Except as allowed under subsection A, all ADUs require an ADU permit and a building permit and must comply with the standards set forth in Sections 17.44.080 and 17.44.090.

2. The city may charge a fee to reimburse it for costs incurred in processing ADU permits, including the costs of adopting or amending the city's ADU ordinance. The ADU permit processing fee is determined by the city council by resolution.

§ 17.44.070. Process and timing.

A. Completeness.

1. Determination in 15 days. The city will determine whether an application to create or serve an ADU or JADU is complete and will provide written notice of the determination to the applicant within 15 business days after the city receives the application submittal.

2. Incomplete items. If the city's determination under subsection (A)(1) above is that the application is incomplete, the city's notice must list the incomplete items and describe how the application can be made complete.

3. Cure. After receiving a notice that the application is incomplete, the applicant may cure and address the items that were deemed by the city to be incomplete.

4. Subsequent submittals. If the applicant submits additional information to address incomplete items, within 15 business days of the subsequent submittal the city will determine in writing whether the additional information remedies all the incomplete items that the city identified in its original notice. The city may not require the application to include an item that was not included in the original notice.

5. Deemed complete. If the city does not make a timely determination as required by this subsection (A), the application or resubmitted application is deemed complete for the purposes of subsection (C) below.

6. Appeal of incompleteness. An applicant may appeal the city's determination that the application is incomplete by submitting a written appeal to the city clerk. The planning commission will review the written appeal and affirm or reverse the completeness determination and provide a final written determination to the applicant within 60 business days after receipt of the appeal.

B. No Discretion or Hearing. An ADU permit is considered and approved ministerially by the community development director without discretionary review or a hearing.

C. Deadline to Approve or Deny Ministerial Approvals. The city must approve or deny an application to create an ADU or JADU within 60 days from the date that the city receives a complete application. If the city has not approved or denied the completed application within 60 days, the application is deemed approved, unless either:

1. The applicant requests a delay, in which case the 60-day time period is tolled for the period of the requested delay, or

2. When an application to create an ADU or JADU is submitted with a permit application to create a new single-family or multifamily dwelling on the lot, the city may delay ~~acting on~~ approving or denying the permit application for the ADU or JADU until the city acts on the permit application to create the new single-family or multifamily dwelling, but the application to create the ADU or JADU will still be considered ministerially without discretionary review or a hearing.

D. Denial. If the city denies an application to create an ADU or JADU, the city must provide the applicant with comments that include, among other things, a list of all the defective or deficient items and a description of how the application may be remedied by the applicant. Notice of the denial and corresponding comments must be provided to the applicant within the 60-day time period established by subsection C above.

E. Appeal of Denial. An applicant may appeal the city's denial of the application by submitting a written appeal to the city clerk. The planning commission will review the written appeal and affirm or reverse the denial and provide a final written determination to the applicant within 60 business days after receipt of the appeal.

F. Concurrent Review of Demolition**.** A demolition permit for a detached garage that is to be replaced with an ADU is reviewed with the application for the ADU and issued at the same time.

§ 17.44.080. General requirements.

The following requirements apply to all Class 1 and Class 2 ADUs and JADUs:

A. Zoning.

1. A Class 1 Statutorily Regulated ADU approved under Section 17.44.060(A) may be created on a lot in a residential or mixed-use zone.

2. A Class 2 Locally Regulated ADU approved under Section 17.44.060(B) may be created on a lot that is zoned to allow single-family dwelling residential use or multifamily dwelling residential use.

3. In accordance with Government Code section 66333(a), a JADU may only be created on a lot zoned to allow single-family residences.

B. Rental Term. An ADU or JADU may not be rented for a term that is shorter than 30 days. This prohibition applies regardless of when the ADU or JADU was created.

C. Rental Rate Reporting. To facilitate the city's obligation to identify adequate sites in accordance with Government Code Sections 65583.1 and 66330, and to help ADUs

and JADUs to count towards the city's Regional Housing Needs Assessment (RHNA) requirements, within 90 days after each January 1 following issuance of the building permit, the owner shall report the actual rent charged for the ADU or JADU during the prior year.

D. No Separate Conveyance. An ADU or JADU may be rented, but, except as otherwise provided in Government Code Section 66341, no ADU may be sold or otherwise conveyed separately from the lot and the primary dwelling (in the case of a single-family lot) or from the lot and all of the dwellings (in the case of a multifamily lot). A JADU may not be sold or otherwise conveyed separately from the lot and the primary dwelling.

E. Septic System. If the ADU or JADU will connect to an on-site water treatment system, the owner must include with the application a percolation test completed within the last five years or, if the percolation test has been recertified, within the last 10 years.

F. Fire Sprinklers.

1. Fire sprinklers are required in an ADU if sprinklers are required in the primary residence.

2. The construction of an ADU does not trigger a requirement for fire sprinklers to be installed in the existing primary dwelling.

G. Owner Occupancy with JADU.

a. Generally. As required by state law, ~~all~~ JADUs are generally subject to an owner-occupancy requirement. A natural person with legal or equitable title to the property must reside on the property, in either the primary dwelling or JADU, as the person's legal domicile and permanent residence.

b. Exceptions. The owner-occupancy requirement in this subsection (G) does not apply in either of the following situations:

1. The JADU has separate sanitation facilities (i.e., does not share sanitation facilities with the existing primary dwelling unit structure).

2. The property is entirely owned by another governmental agency, land trust, or housing organization.

c. ADUs. ADUs are not subject to an owner-occupancy requirement.

H. Deed Restriction. Prior to issuance of a certificate of occupancy for a JADU, a deed restriction must be recorded against the title of the property in the County Recorder's office and a copy filed with the Community Development Director. The deed restriction must run with the land and bind all future owners. The form of the deed restriction will be provided by the city and must provide that:

1. The JADU may not be sold separately from the primary dwelling.

2. A JADU created cannot be rented for less than 30 days.

3. The JADU is restricted to the approved size and to the other attributes allowed by this section.

4. The deed restriction runs with the land and may be enforced against future property owners.

5. The deed restriction is enforceable by the director or his or her designee for the benefit of the city. Failure of the property owner to comply with the deed restriction may result in legal action against the property owner, and the city is authorized to obtain any remedy available to it at law or equity, including, but not limited to, obtaining an injunction enjoining the use of the JADU in violation of the recorded restrictions or abatement of the illegal unit.

I. Building and Safety.

a. Must Comply With Building Code. Subject to subsection I)(b) below, all ADUs and JADUs must comply with all local building code requirements.

b. No Change of Occupancy. Construction of an ADU does not constitute a Group R occupancy change under the local building code, as described in Section 310 of the California Building

i.Code, unless the building official or Code Enforcement Division officer makes a written finding based on substantial evidence in the record that the construction of the ADU could have a specific, adverse impact on public health and safety. Nothing in this subsection (I)(b) prevents the city from changing the occupancy code of a space that was uninhabitable space or that was only permitted for nonresidential use and was subsequently converted for residential use in accordance with this section.

J. **Certificate of Occupancy Timing.**

a. Generally. No certificate of occupancy for an ADU or JADU may be issued before the certificate of occupancy is issued for the primary dwelling unit.

b. Limited Exception for State-Declared Emergencies. Notwithstanding subsection (J)(a) above, a certificate of occupancy for an ADU may be issued before a certificate of occupancy for the primary dwelling if each of the following requirements are met:

1. The county is subject to a proclamation of a state of emergency made by the California Governor on or after February 1, 2025.

2. The primary dwelling was substantially damaged or destroyed by an event

referenced in the Governor's state of emergency proclamation.

3. The ADU has been issued construction permits and has passed all required inspections.

4. The ADU is not attached to the primary dwelling.

K. Height.

a. No ADU subject to this chapter may exceed 16 feet in height above grade, except as provided in subsections (K)(b) through (K)(d) of this section.

b. A detached ADU may be up to 18 feet in height if it is created on a lot with an existing or proposed single-family or multifamily dwelling unit that is located within one-half mile walking distance of a major transit stop as those terms are defined in Section 21155 of the Public Resources Code, and the ADU may be up to two additional feet in height (for a maximum of 20 feet) if necessary to accommodate a roof pitch on the ADU that matches the roof pitch of the primary dwelling unit.

c. A detached ADU created on a lot with an existing or proposed multifamily dwelling that has more than one story above grade may not exceed 18 feet in height.

d. An ADU that is attached to the primary dwelling may not exceed 25 feet in height or the height limitation imposed by the underlying zone that applies to the primary dwelling, whichever is lower. Notwithstanding the foregoing, ADUs subject to this subsection (K)(d) may not exceed two stories.

§ 17.44.090. Specific ADU requirements.

The following requirements apply only to Class 2 - Locally Regulated ADUs under Section 17.44.060 (B) above. This section does not apply to Class 1 Statutorily Regulated ADUs and JADUs under Section 17.44.060 (A) above.

A. Size.

1. The maximum floor area of a detached or attached ADU is 1,000 square feet.

2. Notwithstanding subsection (A)(1), an ADU that is created on a lot with an existing primary dwelling and that is attached to the primary dwelling is limited to 50 percent of the floor area of the existing primary dwelling, subject to subsection (A)(3).

3. Application of other development standards in this Section might further limit the size of the ADU, but no application of the percent-based size limit in subsection A.2 or of a FAR, front-setback, lot-coverage, or open-space requirement may require the ADU to be less than 800 square feet of interior

livable space.

4. By definition, a JADU may not be larger than 500 square feet.

B. Setbacks.

1. The front yard setback of an ADU located on a non-beach front lot, subject to this Section, shall be at least 20 percent of the total depth of the lot, or 65 feet, whichever is less. On a beachfront lot, the front yard setback shall be 20 feet maximum or the average of the two immediate neighbors, whichever is less.

2. No part of any ADU that is subject to this Section may be located within four feet of a side or rear property line.

3. No setback is required for an ADU that is subject to this Section if the ADU is constructed in the same location and to the same dimensions as an existing structure.

C. Floor Area Ratio (FAR). No ADU subject to Section 17.44.090 may cause the total FAR of the lot to exceed 38 percent, subject to subsection 17.44.090(A)(3).

D. Lot Coverage. No ADU subject to this Section may cause the total lot coverage of the lot to exceed 45% for up to ¼ acre; 35% of the net area for lots ¼ to ½ acre and 30% of the net area up to a maximum of 25,000 square feet per parcel for lots ½ acre of more in size, subject to subsection 17.44.090(A)(3).

E. Passageway. No passageway, as defined by Section 17.44.040, is required for an ADU.

F. Parking.

1. Generally. One off-street enclosed or unenclosed parking space is required for each ADU or bedroom, whichever is less. Unenclosed parking spaces may be provided in setback areas or as tandem parking, as defined by Section 17.44.040.

2. Exceptions. No parking under subsection (F)(1) above is required in the following situations:

a. The ADU is located within one-half mile walking distance of public transit, as defined in Section 17.44.040.

b. The ADU is located within an architecturally and historically significant historic district.

c. The ADU is part of the proposed or existing primary residence or part of an existing accessory structure, under Section 17.44.060(A)(1).

d. When on-street parking permits are required but not offered to the occupant of the ADU.

e. When there is an established car share vehicle stop located within one block

of the ADU.

f. When the permit application to create an ADU is submitted with an application to create a new single-family or new multifamily dwelling on the same lot, provided that the ADU or the lot satisfies any other criteria listed in subsections (D)(2)(a) through (D)(2)(f).

3. No Replacement Parking Required. When a garage, carport, covered parking structure, or uncovered parking space is: (a) demolished in conjunction with the construction of an ADU; or (b) converted to an ADU, those off-street parking spaces are not required to be replaced. If replacement parking is proposed by the owner, the parking must be located on hardscape.

G. Internal Connection. An attached ADU shall not be connected internally to the main residence. A detached ADU shall not be connected internally to any accessory structure except to a legally established garage that serves the ADU.

§ 17.44.100. Fees.

A. Impact Fees.

1. No impact fee shall be charged for an ADU that is less than 750 square feet of interior livable space.

2. Any impact fee that is required for an ADU that is 750 square feet or more of interior livable space must be charged proportionately in relation to the floor area of the primary dwelling unit. (e.g., the square footage of the ADU, divided by the square footage of the primary dwelling, times the typical fee amount charged for a new dwelling.)

3. A JADU or ADU with less than 500 square feet of interior livable space does not increase assessable space by 500 square feet for purposes of Education Code section 17620(a)(1)(C), and is therefore not subject to school fees under Education Code section 17620.

4. For purposes of this Section, "impact fee" means a "fee" under the Mitigation Fee Act (Government Code Section 66000(b)) and a fee under the Quimby Act (Government Code Section 66477). It does not include any connection fee or capacity charge for water or sewer service.

B. Utility Fees.

1. An ADU that is constructed with a single-family dwelling shall be subject to standard utility-connection requirements and fees for a new residential use.

2. Converted ADUs created under Section 17.44.060(A)(1) are not required to

have a new or separate utility connection directly between the ADU and the utility. Nor is a connection fee or capacity charge required unless the ADU is constructed with a new single-family home (per subsection (B)(1) above).

3. All ADUs not covered by subsection (B)(1) or (B)(2) above require a new, separate utility connection directly between the ADU and the utility for any utility service that is provided by the City.

    a. All utilities that are not provided by the City are subject to the connection and fee requirements of the utility provider.

    b. The connection is subject to a connection fee or capacity charge that is proportionate to the burden created by the ADU, based on either the square footage or the number of drainage-fixture units (DFU) values, as defined by the Uniform Plumbing Code, upon the water or sewer system. The fee or charge may not exceed the reasonable cost of providing this service.

§ 17.44.110. Nonconforming Zoning Code conditions, Building Code violations, and unpermitted structures.

A. Generally. The city will not deny an ADU or JADU application due to a nonconforming zoning condition, building code violation, or unpermitted structure on the lot that does not present a threat to the public health and safety and that is not affected by the construction of the ADU or JADU.

B. Unpermitted ADUs and JADUs Constructed Before 2020.

1. Permit to Legalize. As required by state law, the city may not deny a permit to legalize an existing but unpermitted ADU or JADU that was constructed before January 1, 2020, if denial is based on either of the following grounds:

    a. The ADU or JADU violates applicable building standards, or

    b. The ADU does not comply with the state ADU or JADU law or with this Chapter 17.44.

2. Exceptions:

    a. Notwithstanding subsection (B)(1) above the city may deny a permit to legalize an existing but unpermitted ADU or JADU that was constructed before January 1, 2020, if the city makes a finding that correcting a violation is necessary to comply with the standards specified in California Health and Safety Code Section 17920.3.

    b. Subsection (B)(1) above does not apply to a building that is deemed to be substandard in accordance with California Health and Safety Code Section 17920.3.

CHAPTER 17.44
ACCESSORY DWELLING UNITS

§ 17.44.010. Title.

This chapter shall be known as the "Malibu Accessory Dwelling Unit Ordinance."

§ 17.44.020. Purpose.

The purpose of this chapter is to allow and regulate accessory dwelling units (ADUs) and junior accessory dwelling units (JADUs) in compliance with Chapter 13 of Division 1 of Title 7 of the California Government Code ~~Sections 65852.2 and 65852.22~~. The entire city of Malibu is located in a designated "Very High Fire Hazard Severity Zone," and this chapter ensures that ADUs and JADUs are developed and operated on adequate sites, at proper and desirable locations, and that the goals and objectives of the general plan are observed.

§ 17.44.030. Effect of conforming.

An ADU or JADU that conforms to the standards in this chapter will be:

A. Deemed to be consistent with the city's general plan and zoning designation for the lot on which the ADU or JADU is located.

B. Deemed not to exceed the allowable density for the lot on which the ADU or JADU is located.

C. Considered not to be subject to the application of any local ordinance, policy, or program to limit residential growth.

D. ~~Permitted to maintain~~Approved without requiring the correction of a nonconforming zoning condition. This does not prevent the city from enforcing compliance with applicable building standards in accordance with Health and Safety Code Section 17980.12. For purposes of this chapter, "nonconforming zoning condition" means a physical improvement on a property that does not conform with current zoning standards.

§ 17.44.040. Definitions.

A. "Accessory dwelling unit" means an attached or a detached residential dwelling unit that provides complete independent living facilities for one or more persons and is located on a lot with a proposed or existing primary residence. An accessory dwelling unit also includes the following:

a. An efficiency unit, as defined by Section 17958.1 of the California **Health and Safety**

Code ~~and the California Building Code~~; and

b. A manufactured home, as defined by Section 18007 of the California **Health and Safety Code**.

B. "Accessory structure" means a structure that is accessory and incidental to a dwelling located on the same lot.

C. "Complete independent living facilities" means permanent provisions for living, sleeping, eating, cooking, and sanitation on the same parcel as the single-family or multifamily dwelling is or will be situated.

D. "Efficiency kitchen" means a kitchen that satisfies all of the following:

a. A cooking facility with appliances;

b. A food preparation counter and storage cabinets that are of a reasonable size in relation to the size of the JADU.

E. "Junior accessory dwelling unit" means a residential unit that

a. Is no more than 500 square feet of interior livable space in size;

b. Is contained entirely within an existing or proposed single-family structure; an enclosed use within the residence, such as an attached garage, is considered to be a part of and contained within the single-family structure;

c. Has an independent exterior entrance, apart from that of the primary dwelling;

d. ~~Includes~~Either includes its own separate sanitation facilities or shares sanitation facilities with the existing or proposed single-family structure, and if the latter, the JADU includes an interior entrance to the main living area of the existing or proposed single-family structure in addition to the exterior entrance to the JADU; and

e. Includes an efficiency kitchen, as defined in this subsection D.

F. "Livable space" means a space in a dwelling intended for human habitation, including living, sleeping, eating, cooking, or sanitation.

G. "Living area" means the interior habitable area of a dwelling unit, including basements and attics, but does not include a garage or any accessory structure.

H. "Passageway" means a pathway that is unobstructed clear to the sky and extends from a street to one entrance of the accessory dwelling unit or junior accessory dwelling unit.

I. "Proposed dwelling" means a dwelling that is the subject of a permit application and that meets the requirements for permitting.

J. "Public transit" means a location, including, but not limited to, a bus stop or train station, where the public may access buses, trains, or subways and other forms of transportation that ~~charges~~charge set fares, run on fixed routes, and are available to the public.

K. "Tandem parking" means that two or more automobiles are parked on a driveway or in any other location on a lot, lined up behind one another.

L. "Very high fire hazard severity zone" means zone as defined by Government Code Section 51177 and designated by Ordinance No. 299 and the City's adopted Local Responsibility Area Fire Hazard Severity Zone Maps~~.~~, as may be amended from time to time.

§ 17.44.050. Permitted locations.

A. ~~ADUS~~ADUs and JADUs under Section 17.44.060(A) ~~shall be~~are allowed on lots that are in a residential or mixed-use zone.

B. ADUs under Section 17.44.060(B) ~~shall be~~are allowed on lots zoned to allow single-family or multifamily dwelling residential use. ~~These zones include Rural Residential (RR), Single Family (SF) Multifamily (MF), Multifamily Beach Front (MFBF), and Planned Development (PD).~~

C. Areas with Adequate Ingress and Egress. Since the entire city ~~is located within~~ is located in a designated "Very High Fire Hazard Severity Zone," consistent with Los Angeles County Fire Department requirements to ensure adequate ingress and egress for fire safety, except as required by state law, a minimum street width of 20 feet shall be required. ADUs are not allowed on parcels that do not have ingress and egress to a street at least 20 feet in width.

~~D. Multifamily Lots. ADUs are allowed on multifamily lots pursuant to 17.44.060(A)(3) and (A)(4). New attached ADUs are not allowed.~~

§ 17.44.060. Approvals.

The following approvals apply to ADUs and JADUs developed under this chapter. Because the city of Malibu lies entirely within the Coastal Zone, ~~every~~ ADU applications may be ~~in the city is~~ subject to the requirements in ~~an analysis for compliance with~~ the Local Coastal Program (LCP) in addition to the provisions of ~~and Coastal Act before it is reviewed for compliance with~~ this chapter. If an ADU application is exempt from the need to obtain a coastal development permit, then only this chapter governs.~~If an application for an ADU is not subject to Both~~ the LCP~~, then~~ ~~and this Chapter~~ ~~governs. State~~ ~~apply to ADUs, in accordance with state law.~~ ~~law is explicit about the Coastal Act not being preempted by the State's ADU statute (Government Code Section 65852.2, subdivision (1)).~~ ~~The provisions of this chapter apply when not in conflict with the City's LCP.~~

A. ~~Building Permit Only~~Class 1: Statutorily Regulated. Class 1 ADUs and JADUs are approved under Government Code Section 66323. If an ADU or JADU complies with each of the general requirements in Section17.44.080 below, it is allowed ~~with only a~~ subject to an ADU permit and a building permit in the following scenarios provided in this subsection (A)~~:~~. An ADU and JADU approved under subsection (A)(1) may be combined with an ADU approved under subsection (A)(2), and ADUs approved under subsection (A)(3) may be combined with ADUs approved under subsection (A)(4).

1. Converted on ~~Single-Family~~a Lot with Single-Family. One ADU as described in this subsection (A)(1) and one JADU on a lot with a proposed or existing single-family dwelling on it, where the ADU or JADU:

    a. Is either: within the space of a proposed single-family dwelling; within the existing space of an existing single-family dwelling; or (in the case of an ADU only) within the existing space of an accessory structure, plus up to 150 additional square feet if the expansion is limited to accommodating ingress and

egress; and

b. Has exterior access that is independent of that for the single-family dwelling; and

c. Has side and rear setbacks sufficient for fire and safety, as dictated by applicable building and fire codes.

d. The JADU complies with the requirements of Government Code Sections ~~65852.22~~ 66333 through 66339.

2. Limited Detached on ~~Single-family~~a Lot with Single-Family. One detached, new-construction ADU on a lot with a proposed or existing single-family dwelling (in addition to any JADU that might otherwise be established on the lot under subsection (A)(1) above if the detached ADU satisfies each of the following limitations:

   a. The side- and rear-yard setbacks are at least four feet.

   b. The total floor area is 800 square feet or smaller.

   c. The peak height above grade does not exceed the applicable height limit in subsection 17.44.080(~~I~~ K) below.

3. Converted on ~~Multifamily~~a Lot with Multifamily. One or more ADUs within portions of existing multifamily dwelling structures that are not used as livable space, including, but not limited to, storage rooms, boiler rooms, passageways, attics, basements, or garages, if each converted ADU complies with state building standards for dwellings. Under this subsection (A)(3) at least one converted ADU is allowed within an existing multifamily dwelling, up to a quantity equal to 25 percent of the existing multifamily dwelling units.

4. Limited Detached on ~~Multifamily~~a Lot with Multifamily. No more than two detached ADUs on a lot that has ~~an existing or~~a proposed multifamily dwelling, or up to eight detached ADUs on a lot with an existing multifamily dwelling, if each detached ADU satisfies both of the following limitations:

   a. The side- and rear-yard setbacks are at least four feet. If the existing multifamily dwelling has a rear or side yard setback of less than four feet, the city will not require any modification to the multifamily dwelling as a condition of approving the ADU.

   b. The peak height above grade does not exceed the applicable height limit provided in subsection 17.44.080(~~I~~K) below.

   c. If the lot has an existing multifamily dwelling, the quantity of detached ADUs does not exceed the number of primary dwelling units on the lot.

B. ~~Administrative Plan Review Permit (APR)~~Class 2: Locally Regulated. Class 2 ADUs are approved under Government Code sections 66314–66322.

1. Except as allowed under ~~this~~ subsection A, ~~no~~ all ADUs ~~may be created without~~ require an ADU permit and a building permit ~~and an APR~~ ~~in compliance~~ and must comply with the standards set forth in Sections 17.44.080 and 17.44.090.

2. The city may charge a fee to reimburse it for costs incurred in processing ~~APR~~ADU permits, including the costs of adopting or amending the city's ADU ordinance. The ~~APR permit~~ADU permit processing fee is determined by the city council by resolution.

§ 17.44.070. Process and timing.

A. Completeness.

1. Determination in 15 days. The city will determine whether an application to create or serve an ADU or JADU is complete and will provide written notice of the determination to the applicant within 15 business days after the city receives the application submittal.

2. Incomplete items. If the city's determination under subsection (A)(1) above is that the application is incomplete, the city's notice must list the incomplete items and describe how the application can be made complete.

3. Cure. After receiving a notice that the application is incomplete, the applicant may cure and address the items that were deemed by the city to be incomplete.

4. Subsequent submittals. If the applicant submits additional information to address incomplete items, within 15 business days of the subsequent submittal the city will determine in writing whether the additional information remedies all the incomplete items that the city identified in its original notice. The city may not require the application to include an item that was not included in the original notice.

5. Deemed complete. If the city does not make a timely determination as required by this subsection (A), the application or resubmitted application is deemed complete for the purposes of subsection (C) below.

6. Appeal of incompleteness. An applicant may appeal the city's determination that the application is incomplete by submitting a written appeal to the city clerk. The planning commission will review the written appeal and affirm or reverse the completeness determination and provide a final written determination to the applicant within 60 business days after receipt of the appeal.

B. No Discretion or Hearing. An ~~APR~~ADU permit is considered and approved ministerially by the community development ~~planning~~ director without discretionary review or a hearing.

C. Deadline to Approve or Deny Ministerial Approvals. The city must approve or deny an application to create an ADU or JADU within 60 days from the date that the city receives a complete application~~,~~. If the city has not approved or denied the completed application within 60 days, the application is deemed approved, unless either:

1. The applicant requests a delay, in which case the 60-day time period is tolled for the period of the requested delay, or

2. When an application to create an ADU or JADU is submitted with a permit application to create a new single-family or multifamily dwelling on the lot, the city may delay ~~acting on~~ approving or denying the permit application for the ADU or JADU until the city acts on the permit application to create the new single-family or multifamily dwelling, but the application to create the ADU or JADU will still be considered ministerially without discretionary review or a hearing.

D. Denial. If the city denies an application to create an ADU or JADU, the city must provide the applicant with comments that include, among other things, a list of all the defective or deficient items and a description of how the application may be remedied by the applicant. Notice of the denial and corresponding comments must be provided to the applicant within the 60-day time period established by subsection C above.

E. Appeal of Denial. An applicant may appeal the city's denial of the application by submitting a written appeal to the city clerk. The planning commission will review the written appeal and affirm or reverse the denial and provide a final written determination to the applicant within 60 business days after receipt of the appeal.

F. Concurrent Review of Demolition. A demolition permit for a detached garage that is to be replaced with an ADU is reviewed with the application for the ADU and issued at the same time.

§ 17.44.080. General ~~ADU and JADU~~ requirements.

The following requirements apply to all Class 1 and Class 2 ADUs and JADUs: ~~that are approved under Section 17.44.060.~~

A. Zoning.

1. A Class 1 Statutorily Regulated ADU approved under Section 17.44.060(A) may be created on a lot in a residential or mixed-use zone.

2. A Class 2 Locally Regulated ADU approved under Section 17.44.060(B) may be created on a lot that is zoned to allow single-family dwelling residential use or multifamily dwelling residential use.

3. In accordance with Government Code section 66333(a), a JADU may only be created on a lot zoned to allow single-family residences.

B. Rental Term. An ADU or JADU may not be rented for a term that is shorter than 30 days. This prohibition applies regardless of when the ADU or JADU was created.

C. Rental Rate Reporting. To facilitate the city's obligation to identify adequate sites in accordance with Government Code Sections 65583.1 and ~~65852.2~~66330, and to ~~allow~~help ADUs and JADUs to count towards the city's Regional Housing Needs Assessment (RHNA) requirements, within 90 days after each January 1 following issuance of the building permit, the owner shall report the actual rent charged for the ADU or JADU during the prior year.

D. No Separate Conveyance. An ADU or JADU may be rented, but, except as otherwise provided in Government Code Section ~~65852.26~~66341, no ADU ~~or JADU~~may be sold or otherwise conveyed separately from the lot and the primary dwelling (in the case of a single-family lot) or from the lot and all of the dwellings (in the case of a multifamily lot). A JADU may not be sold or otherwise conveyed separately from the lot and the primary dwelling.

E. Septic System. If the ADU or JADU will connect to an on-site water treatment system, the owner must include with the application a percolation test completed within the last five years or, if the percolation test has been recertified, within the last 10 years.

F. Fire Sprinklers.

1. Fire sprinklers are required in an ADU if sprinklers are required in the primary residence.

2. The construction of an ADU does not trigger a requirement for fire sprinklers to be installed in the existing primary dwelling.

G. ~~F.~~Owner Occupancy with JADU.

a. Generally. As required by state law, ~~all~~ JADUs are generally subject to an owner-occupancy requirement. A natural person with legal or equitable title to the property must reside on the property, in either the primary dwelling or JADU, as the person's legal domicile and permanent residence. ~~However, the owner-occupancy requirement in this subsection D does not apply if the property is entirely owned by another governmental agency, land trust, or housing organization, in accordance with state law.~~

b. Exceptions. The owner-occupancy requirement in this subsection (G) does not apply in either of the following situations:

1. The JADU has separate sanitation facilities (i.e., does not share sanitation facilities with the existing primary dwelling unit structure).

2. The property is entirely owned by another governmental agency, land trust, or housing organization.

c. ADUs. ADUs are not subject to an owner-occupancy requirement.

H. Deed Restriction. Prior to issuance of a ~~building permit~~ certificate of occupancy for ~~an ADU or~~ a JADU, a deed restriction must be recorded against the title of the property in the County Recorder's office and a copy filed with the Community Development Director. The deed restriction must run with the land and bind all future owners. The form of the deed restriction will be provided by the city and must provide that:

1. ~~Except as otherwise provided in Government Code Section 65852, 26, the ADU or~~The JADU may not be sold separately from the primary dwelling.

~~2. The ADU or JADU must remain an ADU unless city approval is obtained to convert the structure to a different accessory structure.~~

~~3.~~2. ~~An ADU or~~ A JADU created cannot be rented for less than 30 days.

~~4.~~3. The ~~ADU or~~ JADU is restricted to the approved size and to the other attributes allowed by this section.

~~6.~~4. The deed restriction runs with the land and may be enforced against future property owners.

~~5. The JADU must be reconverted to be part of the primary residence if the owner does not reside on the property.~~

~~7. The deed restriction may be removed if the owner eliminates the ADU or JADU, as evidenced by, for example, removal of the kitchen facilities. To remove the deed restriction, an owner may make a written request of the director, providing evidence that the ADU or JADU has in fact been eliminated. The director may then determine whether~~

~~the evidence supports the claim that the ADU or JADU has been eliminated. Appeal may be taken from the director's determination consistent with other provisions of this code. If the ADU or JADU is not entirely physically removed but is only eliminated by virtue of having a necessary component of an ADU or JADU removed, the remaining structure and improvements must otherwise comply with applicable provisions of this code.~~

~~8.~~5. The deed restriction is enforceable by the director or his or her designee for the benefit of the city. Failure of the property owner to comply with the deed restriction may result in legal action against the property owner, and the city is authorized to obtain any remedy available to it at law or equity, including, but not limited to, obtaining an injunction enjoining the use of the ~~ADU or~~ JADU in violation of the recorded restrictions or abatement of the illegal unit.

I. ~~G.~~ Building and Safety.

a. ~~1.~~Must Comply With Building Code. Subject to subsection ~~(H)(2)~~(I)(b) below, all ADUs and JADUs must comply with all local building code requirements.

b. ~~2.~~No Change of Occupancy. Construction of an ADU does not constitute a Group R occupancy change under the local building code, as described in Section 310 of the California Building

1. Code, unless the building official or Code Enforcement Division officer makes a written finding based on substantial evidence in the record that the construction of the ADU could have a specific, adverse impact on public health and safety. Nothing in this subsection ~~(H)(2)~~(I)(b) prevents the city from changing the occupancy code of a space that was uninhabitable space or that was only permitted for nonresidential use and was subsequently converted for residential use in accordance with this section.

J. **Certificate of Occupancy Timing.**

a. Generally. No certificate of occupancy for an ADU or JADU may be issued before the certificate of occupancy is issued for the primary dwelling unit.

b. Limited Exception for State-Declared Emergencies. Notwithstanding subsection (J)(a) above, a certificate of occupancy for an ADU may be issued before a certificate of occupancy for the primary dwelling if each of the following requirements are met:

i. The county is subject to a proclamation of a state of emergency made by the California Governor on or after February 1, 2025.

ii. The primary dwelling was substantially damaged or destroyed by an event referenced in the Governor's state of emergency proclamation.

iii. The ADU has been issued construction permits and has passed all required inspections.

iv. The ADU is not attached to the primary dwelling.

K. ~~H.~~ Height.

a. ~~1.~~No ADU subject to this chapter may exceed 16 feet in height above grade, ~~as measured from existing or finished legal grade, whichever results in the lower building height~~ except as provided in subsections ~~(I)(2)~~ (K)(b) through ~~(I)(4)~~ (K)(d) of this section.

b. ~~2.~~A detached ADU may be up to 18 feet in height if it is created on a lot with an existing or proposed single-family or multifamily dwelling unit that is located within one-half mile walking distance of a major transit stop as those terms are defined in Section 21155 of the Public Resources Code, and the ADU may be up to two additional feet in height (for a maximum of 20 feet) if necessary to accommodate a roof pitch on the ADU that ~~is aligned~~ matches the roof pitch of the primary dwelling unit.

c. ~~3.~~A detached ADU created on a lot with an existing or proposed multifamily dwelling that has more than one story above grade may not exceed 18 feet in height.

d. ~~4.~~An ADU that is attached to the primary dwelling may not exceed 25 feet in height or the height limitation imposed by the underlying zone that applies to the primary dwelling, whichever is lower. Notwithstanding the foregoing, ADUs subject to this subsection ~~(I)(4)~~ (K)(d) may not exceed two stories.

§ 17.44.090. Specific ADU requirements.

The following requirements apply only to ~~ADUs that require an APR permit under Section 17.44.060(B) above.~~Class 2 - Locally Regulated ADUs under Section 17.44.060 (B) above. This section does not apply to Class 1 Statutorily Regulated ADUs and JADUs under Section 17.44.060 (A) above.

A. Size.

1. The maximum ~~square footage of an~~ floor area of a detached or attached ADU ~~shall be~~is 1,000 square feet. ~~The maximum square footage shall include interior and exterior walls, finished and unfinished basements, mezzanines, storage space, and any space with a height clearance (floor to ceiling height dimension) above six feet. The area of a garage (400 square feet maximum) provided as part of accessory dwelling unit and exterior decks or overhangs that are attached to the structure shall not be included in the 850 to 1,000 square foot limit.~~

2. Notwithstanding subsection (A)(1), an ADU that is created on a lot with an existing primary dwelling and that is attached to the primary dwelling is ~~further~~ limited to 50 percent of the floor area of the existing primary dwelling, subject to subsection (A)(3).

3. Application of other development standards in this Section ~~17.44.090~~ might further ~~the~~ limit the size of the ADU, but no application of the percent-based size limit in subsection A.2 or of a~~n~~ FAR, front-setback, lot-coverage, or open-space requirement may require the ADU to be less than 800 square feet of interior livable space.

4. By definition, a JADU may not be larger than 500 square feet.

B. Setbacks.

1. The front yard setback of an ADU located on a non-beach front lot, subject to this Section ~~17.44.090~~, shall be at least 20 percent of the total depth of the lot, or 65 feet, whichever is less. On a beachfront lot, the front yard setback shall be 20 feet maximum

or the average of the two immediate neighbors, whichever is less.

2. No part of any ADU that is subject to this Section ~~17.44.090~~ may be located within four feet of a side or rear property line.

3. No ~~additional~~ setback is required for an ADU that is subject to this Section ~~17.44.090~~ if the ADU is constructed in the same location and to the same dimensions as an ~~existing legally established~~ ~~accessory~~ structure ~~that was is legally demolished and then replaced with the ADU~~.

C. Floor Area Ratio (FAR). No ADU subject to Section 17.44.090 may cause the total FAR of the lot to exceed 45 percent, subject to subsection 17.44.090(A)(3).

D. ~~C.~~ Lot Coverage. No ADU subject to this Section may cause the total lot coverage of the lot to exceed 45% for up to ¼ acre; 35% of the net area for lots ¼ to ½ acre and 30% of the net area up to a maximum of 25,000 square feet per parcel for lots ½ acre of more in size, subject to subsection ~~(A)(3) above~~ 17.44.090(A)(3).

E~~C.~~Passageway. No passageway, as defined by Section 17.~~02~~44.0~~6~~40, is required for an ADU.

F~~D.~~Parking.

1. Generally. One off-street enclosed or unenclosed parking space is required for each ADU or bedroom, whichever is less. Unenclosed parking spaces may be provided in setback areas or as tandem parking, as defined by Section 17.~~02~~44.040.

2. Exceptions. No parking under subsection (F~~D~~)(1) above is required in the following situations:

   a. The ADU is located within one-half mile walking distance of public transit, as defined in Section 17.~~02.~~44.040.

   b. The ADU is located within an architecturally and historically significant historic district.

   c. The ADU is part of the proposed or existing primary residence or part of an existing accessory structure, under Section 17.44.060(A)(1).

   d. When on-street parking permits are required but not offered to the occupant of the ADU.

   e. When there is an established car share vehicle stop located within one block of the ADU.

   f. When the permit application to create an ADU is submitted with an application to create a new single-family or new multifamily dwelling on the same lot, provided that the ADU or the lot satisfies any other criteria listed in subsections (F~~D~~)(2)(a) through (F~~D~~)(2)(f).

3. No Replacement ~~of~~ Parking Required. When a garage, carport, ~~or~~ covered parking structure, or uncovered parking space is: (a) demolished in conjunction with the construction of an ADU; or (b) converted to an ADU, those off-street parking spaces

are not required to be replaced. If replacement parking is proposed by the owner, the parking must be located on hardscape.

GE. Internal Connection. An attached ADU shall not be connected internally to the main residence. A detached ADU shall not be connected internally to any accessory structure except to a legally established garage that serves the ADU.

§ 17.44.100. Fees.

A. Impact Fees.

1. No impact fee shall be charged for an ADU that is less than 750 square feet in size of interior livable space.

2. Any impact fee that is required for an ADU that is 750 square feet or larger in size more of interior livable space must be charged proportionately in relation to the square footagefloor area of the primary dwelling unit. (E.e.g., the square footage of the ADU, divided by the square footage of the primary dwelling, times the typical fee amount charged for a new dwelling.) "Impact fee" here does not include any connection fee or capacity charge for water or sewer service.

3. A JADU or ADU with less than 500 square feet of interior livable space does not increase assessable space by 500 square feet for purposes of Education Code section 17620(a)(1)(C), and is therefore not subject to school fees under Education Code section 17620.

4. For purposes of this sSection 17.44.100, "impact fee" means a "fee" under the Mitigation Fee Act (Government Code Section 66000(b)) and a fee under the Quimby Act (Government Code Section 66477). It does not include any connection fee or capacity charge for water or sewer service.

B. Utility Fees.

1. ADUs An ADU that is constructed with a single-family dwelling shall be subject to standard utility-connection requirements and fees for a new primary dwelling residential use.

2. Converted ADUs created under Section 17.44.060(A)(1) are not required to have a new or separate utility connection directly between the ADU and the utility. Nor is a connection fee or capacity charge required unless the ADU is constructed with a new single-family home (per subsection (B.)(1) above).

C. All ADUs not covered by Section 17.44.100 subsection (B)(1) or (B)(2) above require a new, separate utility connection directly between the ADU and the utility. for any utility service that is provided by the City. The connection is subject to a connection fee or capacity charge that is proportionate to the burden created by the ADU, based on either the square footage or the number of drainage fixture units (DFU) values, as defined by the Uniform Plumbing Code, upon the water or sewer system. The fee or charge may not exceed the reasonable cost of providing this service.

a. All utilities that are not provided by the City are subject to the connection and fee

requirements of the utility provider.

b. The connection is subject to a connection fee or capacity charge that is proportionate to the burden created by the ADU, based on either the square footage or the number of drainage-fixture units (DFU) values, as defined by the Uniform Plumbing Code, upon the water or sewer system. The fee or charge may not exceed the reasonable cost of providing this service.

§ 17.44.110. Nonconforming Zoning Code conditions, Building Code violations, and unpermitted structures.

A. Generally. The city will not deny an ADU or JADU application due to a nonconforming zoning condition, building code violation, or unpermitted structure on the lot that does not present a threat to the public health and safety and that is not affected by the construction of the ADU or JADU.

B. Unpermitted ADUs and JADUs Constructed Before ~~2018~~2020.

1. Permit to Legalize. As required by state law, the city may not deny a permit to legalize an existing but unpermitted ADU or JADU that was constructed before January 1, ~~2018~~2020, if denial is based on either of the following grounds:

   a. The ADU or JADU violates applicable building standards, or

   b. The ADU does not comply with the state ADU ~~law (Government Code Section 65852.2) or this ADU~~or JADU laws or with this Chapter 17.44.

2. Exceptions:

   a. Notwithstanding subsection (B)(1) above the city may deny a permit to legalize an existing but unpermitted ADU or JADU that was constructed before January 1, ~~2018~~2020, if the city makes a finding that correcting a violation is necessary to ~~protect the health and safety of the public or of occupants of the structure~~comply with the standards specified in California Health and Safety Code Section 17920.3.

   b. Subsection (B)(1) above does not apply to a building that is deemed to be substandard in accordance with California Health and Safety Code Section 17920.3.

Salvador Lopez, Jr.
Interim Assistant Planning Director
City of Malibu
23825 Stuart Ranch Road
Malibu, California 90265-4861

Dear Salvador Lopez, Jr:

RE: Review of Malibu's Accessory Dwelling Unit (ADU) Ordinance under State ADU Law (Gov. Code, §§ 6631 - 66342)

Please Note: As of March 25, 2024, with the Chaptering of Senate Bill (SB) 477 (Chapter 7, Statutes of 2024), the sections of Government Code relevant to State ADU and junior accessory dwelling unit (JADU) Law have been re-numbered (Enclosure 1).

Thank you for submitting the City of Malibu (City) ADU Ordinance No. 511 (Ordinance), adopted January 8, 2024, to the California Department of Housing and Community Development (HCD). The Ordinance was received on February 1, 2024. HCD has reviewed the Ordinance and submits these written findings pursuant to Government Code section 66326, subdivision (a). HCD finds that the Ordinance does not comply with State ADU and junior accessory dwelling unit (JADU) Laws in the manner noted below. Pursuant to Government Code section 66326, subdivision (b)(1), the City has up to 30 days to respond to these findings. Accordingly, the City must provide a written response to these findings no later than December 13, 2024.

The Ordinance addresses many statutory requirements; however, HCD finds that the Ordinance does not comply with State ADU Law in the following respects:

1. *Statutory Numbering* – The Ordinance contains several references to code sections that were deleted by SB 477, effective March 25, 2024. These include Government Code sections 65852.2, 65852.22 and 65852.26. The contents of these sections were relocated to Government Code, Title 7, Division 1, Chapter 13 (sections 66310-66342, see Enclosure). The City must amend the Ordinance to refer to the correct code sections.

2. Section 17.44.050(C) – *Ingress and Egress* – The Ordinance states, "Areas with Adequate Ingress and Egress. Since the entire City is located within [sic] a designated "Very High Fire Hazard Severity Zone," (VHFHSZ) consistent with Los

Angeles County Fire Department requirements to ensure adequate ingress and egress for fire safety, a minimum street width of 20 feet shall be required. ADUs are not allowed on parcels that do not have ingress and egress to a street at least 20 feet in width."

However, Government Code section 66314, subdivision (a) states that an ordinance shall "Designate areas within the jurisdiction of the local agency where accessory dwelling units may be permitted. The designation of areas may be based… on the adequacy of water and sewer services and the impact of accessory dwelling units on traffic flow and public safety." The ordinance does not designate the specific areas where ADUs are prohibited in accordance with Government Code section 66314, subdivision (a). Additionally, Government Code section 66315 states, "Section 66314 establishes the maximum standards that a local agency shall use to evaluate a proposed accessory dwelling unit on a lot that includes a proposed or existing single-family dwelling. No additional standards, other than those provided in Section 66314, shall be used or imposed…" The City of Malibu's adopted Fire Code is the 2022 California Fire Code (CFC), not The Los Angeles County Fire Code, as mentioned. These additional standards on single-family ADU development imposed by other policies or regulations are not compliant with State ADU Law.

Further, while the California Department of Forestry and Fire Protection (CALFIRE) maps establish the VHFHSZ boundaries, the purpose of these maps is not to limit the locations where ADUs or other dwellings may be permitted. Rather, the CALFIRE maps identify areas in which hazard mitigating building design standards will apply. The City may not restrict ADUs pursuant to Government Code section 66314 et seq. while simultaneously allowing, through its building and zoning codes, other new residential development, and therefore, the City must remove this requirement.

Section 17.44.050(D) – *Multifamily ADUs* – The Ordinance states, "New attached ADUs are not allowed" on multifamily lots. However, Government Code section 66314, subdivision (d)(3) states "A local agency may, by ordinance, provide for the creation of accessory dwelling units in areas zoned to allow single-family or multifamily dwelling residential use. The ordinance shall… Require the accessory dwelling units to comply with all of the following:

The accessory dwelling unit is either attached to, or located within, the proposed or existing primary dwelling, including attached garages, storage areas or similar uses, or an accessory structure or detached from the proposed or existing primary dwelling and located on the same lot as the proposed or existing primary dwelling, including detached garages."

ADUs may be attached, converted from existing space, or detached from both single-family and multifamily dwellings. Prohibiting the construction of ADUs

attached to multifamily dwellings would not be compliant with State ADU Law. Therefore, the City must remove this provision.

3. Section 17.44.060 – *Approvals* – The Ordinance states, "Because the City of Malibu lies entirely within the Coastal Zone, every ADU application in the City is subject to an analysis for compliance with the Local Coastal Program (LCP) and Coastal Act before it is reviewed for compliance with this Chapter. If an application for an ADU is not subject to the LCP, then this Chapter governs." While it is true that Government Code section 66329 states that State ADU Law shall not be "…construed to supersede or in any way alter or lessen the effect or application of the California Coastal Act of 1976…" the City must review all ADU applications for any provisions or attributes which are not addressed within the LCP in compliance with State ADU Law. Only applying the provisions of the LCP to ADU applications is not in compliance with State ADU Law. Therefore, the City must amend this section to clarify that the provisions within State ADU Law are applicable to an application wherever those provisions are not directly in conflict with the provisions of an approved LCP.

4. Section 17.44.070 (B)(2) – *Action on Application* – The Ordinance states, "When an application to create an ADU or JADU is submitted with a permit application to create a new single-family or multifamily dwelling on the lot, the city may delay acting on the permit application for the ADU or JADU until the city acts on the permit application to create the new single-family or multifamily dwelling…" However, Government Code section 66317, subdivision (a) states, "If the permit application to create or serve an accessory dwelling unit or a junior accessory dwelling unit is submitted with a permit application to create a new single-family or multifamily dwelling on the lot, the permitting agency may delay approving or denying the permit application for the accessory dwelling unit or the junior accessory dwelling unit until the permitting agency approves or denies the permit application to create the new single-family or multifamily dwelling, but the application to create or serve the accessory dwelling unit or junior accessory dwelling unit shall be considered without discretionary review or hearing." As of January 1, 2023, this provision was amended to clarify that a local agency must "approve or deny" an application within the 60-day timeframe, rather than simply "act" on it. Therefore, the City should amend this section to reflect the requirement to "approve or deny" an application in accordance with State ADU Law.

5. Section 17.44.080 (F)(1) – *Separate Sale* – The Ordinance states, "Except as otherwise provided in Government Code Section 65852,26, the ADU or JADU may not be sold separately from the primary dwelling." However, Government Code section 66341, (formerly Government Code section 65852.26), does not include any provisions for the separate sale of JADUs. JADUs may not be sold separately from the primary structure under State ADU Law. Therefore, the City should clarify that there are no circumstances within State ADU Law which allow for the separate sale of a JADU.

6. Section 17.44.080 (F)(2), (4), (5), and (7) – *Deed Restrictions* – The Ordinance states, "Prior to issuance of a building permit for an ADU or JADU, a deed restriction must be recorded against the title of the property…" and lists several restrictions which are not in compliance with State ADU Law. Those not in compliance include:

   "2. The ADU or JADU must remain an ADU unless City approval is obtained to convert the structure to a different accessory structure.

   4. The ADU or JADU is restricted to the approved size.

   5. The JADU must be reconverted to be part of the primary residence if the owner does not reside on the property.

   7. The deed restriction may be removed if the owner eliminates the ADU or JADU, as evidenced by, for example, removal of the kitchen facilities. To remove the deed restriction, an owner may make a written request of the Director, providing evidence that the ADU or JADU has in fact been eliminated. The Director may then determine whether the evidence supports the claim that the ADU or JADU has been eliminated. Appeal may be taken from the Director's determination consistent with other provisions of this Code. If the ADU or JADU is not entirely physically removed but is only eliminated by virtue of having a necessary component of an ADU or JADU removed, the remaining structure and improvements must otherwise comply with applicable provisions of this Code."

   However, no deed restrictions, other than for those items explicitly mentioned within Articles 2, 3, and 4 of Chapter 13, Division 1, Title 7 of the Government Code may be applied to ADUs or JADUs. Government Code section 66333, subdivision (b), removes the owner-occupancy requirement for JADUs when the owner is a governmental agency, land trust, or housing organization. JADU deed restrictions may include a maximum size of 500 square feet for a JADU, among other restrictions on attributes which conform to article 3, pursuant to Government Code section 66333, subdivision (c). Therefore, the City must remove these excessive deed restriction requirements.

7. Section 17.44.080 (I) – *Height* – The Ordinance states, "No ADU subject to this Chapter may exceed 16 feet in height above grade, as measured from existing or finished legal grade, whichever results in the lower building height…" However, section 202 of the 2022 California Building Code (CBC) defines 'Height, Building' as "The vertical distance from grade plane to the average height of the highest roof surface." Additionally, the City of Malibu Municipal Code does not amend this definition pursuant to section 1.8.6 of the CBC and may not erroneously apply it exclusively to the construction of ADUs. Therefore, the City must amend this section to reflect a definition of "height" that is consistent with the CBC.

8. Section 17.44.090 (A)(1) – *Ceiling Height* – The Ordinance states, "The maximum square footage shall include interior and exterior walls, finished and unfinished basements, mezzanines, storage space, and any space with a height clearance

(floor to ceiling height dimension) above six feet." However, section 1208.2 of the CBC states "Occupiable spaces, habitable spaces and corridors shall have a ceiling height of not less than 7 feet 6 inches above the finished floor. Bathrooms, toilet rooms, kitchens, storage rooms and laundry rooms shall have a ceiling height of not less than 7 feet above the finished floor."

Additionally, Section R305.1 of the 2022 California Residential Code (CRC), which applies to one- and two-family dwellings, states, "Habitable space, hallways and portions of basements containing these spaces shall have a ceiling height of not less than 7 feet. Bathrooms, toilet rooms and laundry rooms shall have a ceiling height of not less than 6 feet 8 inches." The City of Malibu Municipal Code does not include amendments to these provisions pursuant to section 1.8.6 of the CBC and may not erroneously apply it exclusively to the construction of ADUs. Therefore, the City must amend this section to reflect a size calculation that is consistent with the CBC/CRC.

9. Section 17.44.090 (A)(2), (A)(3) – *Size, Attached* – The Ordinance states, "An ADU that is attached to the primary dwelling is limited to 50 percent of the existing primary dwelling …. Application of other development standards in this Section 17.44.090 might further the [sic] limit the size of the ADU, but no application of an FAR, front-setback, lot-coverage, or open-space requirement may require the ADU to be less than 800 square feet." However, Government Code section 66321, subdivision (b)(3) states, "a local agency shall not establish by ordinance… Any requirement for a zoning clearance or separate zoning review or any other minimum or maximum size for an accessory dwelling unit, size based upon a percentage of the proposed or existing primary dwelling, or limits on lot coverage, floor area ratio, open space, front setbacks, and minimum lot size, for either attached or detached dwellings that does not permit at least an 800 square foot accessory dwelling unit with four-foot side and rear yard setbacks to be constructed in compliance with all other local development standards." An attached ADU may be 800 square feet in size regardless of the size of the primary unit, as long as it remains compliant with other objective development standards other than those listed. Restricting the size of attached ADUs to less than 800 square feet directly conflicts with Government Code section 66321, subdivision (b)(3). Therefore, the City must amend this section to reflect the 800 square foot exemption.

10. Section 17.44.090 (D)(2) – *Parking Exceptions* – The Ordinance states, "No parking under subsection (E)(1)[sic] above is required in the following situations…" However, there is no subsection (E)(1) to reference. The general parking standards appear to be subsection (D)(1). Therefore, the City should amend this section to correct the reference.

Please note that the City has two options in response to this letter.[1] The City can either amend the Ordinance to comply with State ADU Law[2] or adopt the Ordinance without changes and include findings in its resolution adopting the Ordinance that explain the reasons the City believes that the Ordinance complies with State ADU Law despite HCD's findings.[3] If the City fails to take either course of action and bring the Ordinance into compliance with State ADU Law, HCD must notify the City and may notify the California Office of the Attorney General that the City is in violation of State ADU Law.[4]

HCD appreciates the City's efforts in the preparation and adoption of the Ordinance and welcomes the opportunity to assist the City in fully complying with State ADU and JADU Law. Please feel free to contact Tyler Galli, of our staff, at (916) 776-7613 or at Tyler.Galli@hcd.ca.gov.

Sincerely,

Jamie Candelaria

Jamie Candelaria

Summary of ADU State Law Changes

The following summarizes recent State laws governing accessory dwelling units that require amendments to MMC Chapter 17.44 to maintain consistency with State law.

AB 462 – Coastal Development Permits; Disaster-Affected Areas

Existing law requires many ADUs proposed in the Coastal Zone to obtain a Coastal Development Permit (CDP) in addition to other local ADU permit requirements. Historically, the CDP for an ADU was not subject to state ADU law's 60-day shot clock to approve or deny a complete ADU application. Additionally, local permitting decisions on a CDP for an ADU could be appealed to the California Coastal Commission if the underlying property was subject to the Coastal Commission's appeals jurisdiction (as set forth in Public Resources Code 30603).

AB 462 alters the status quo on numerous fronts. Most notably, local agencies with a certified local coastal program (LCP) must now approve or deny a CDP application for an ADU within 60 days of receiving a complete application. The local agency's review of the CDP application must also take place "concurrently with the process to approve or deny" any other permit required to approve the ADU (i.e., an ADU permit and building permit). (Gov. Code, § 66329(a).) AB 462 also eliminates the ability to appeal a CDP for an ADU to the Coastal Commission. If a local agency does not have a certified LCP, then it now must "immediately notify" the Coastal Commission when an ADU application is submitted. Subject to limited exceptions, the Coastal Commission's review of the CDP application is subject to the same 60-day shot clock that applies to local agencies with a certified LCP. (Id., at (b)(1)-(5).)

Beyond changes to CDP processing, AB 462 modifies the rules governing the issuance of a certificate of occupancy (CofO) for an ADU. Historically, state law has prohibited a local agency from issuing a CofO for an ADU before one is issued for the primary dwelling (i.e., the primary dwelling must have a CofO before the ADU can receive one).

AB 462 creates a narrow exception to this prohibition for detached ADUs when all of the following conditions are satisfied: (1) the Governor has declared a state of emergency for the county on or after February 1, 2025; (2) the primary dwelling was substantially damaged or destroyed by an event referenced in the state of emergency proclamation; and (3) the ADU has been issued construction permits and passed all required inspections. (Gov. Code, § 66328(b).) If these conditions are satisfied, the detached ADU can receive a CofO before the primary dwelling. In all other scenarios, the primary dwelling still needs a CofO before one can be issued for an ADU.

AB 462 was enacted as an urgency measure that took effect immediately when signed by the Governor (on October 10, 2025).

AB 1154, SB 9 (2025), and SB 543 were enacted as non-urgency measures and take effect on January 1, 2026.

AB 1154 – JADU Owner-Occupancy; Short-Term Rental

When a JADU is developed, existing state law requires a property owner to reside in the JADU or remaining portion of the single-family dwelling. AB 1154 narrows this requirement to now only apply when a JADU shares sanitation facilities (bathroom) with the single-family dwelling. If the JADU has its own bathroom, then the property owner does not have to reside on the property at all. (See amended Gov. Code, § 66333(b).)

AB 1154 also expressly prohibits JADUs from being used as short-term rentals (i.e., rented for a term shorter than 30 days). (See amended Gov. Code, § 66333(g).) Most ADU ordinances already included this prohibition (as well as prohibiting ADUs from being used as short-term rentals). But now it's required by state law.

SB 9; SB 543 – Ordinance Submittal to HCD; Approval

Under existing law, local agencies are required to submit a copy of their ADU ordinance to the California Department of Housing and Community Development (HCD) within 60 days of adoption.

This year's SB 9[1] and SB 543 create a penalty for failing to do so by rendering null and void any local ordinance that is not submitted to HCD within 60 days of adoption. (See amended Gov. Code, § 66326(d); new Gov. Code, § 66333.5(d).) The bills further specify that a local ADU ordinance is null and void if HCD issues findings that the ordinance does not comply with state law and the local agency fails to respond to HCD within 30 days. (*Id*.)

SB 543 – ADU Size; Number of ADUs; Impact Fees; Application Timeline

SB 543 makes numerous changes and clarifications to state ADU law, the most notable of which are summarized below.

ADU & JADU Size

Existing law limits the maximum size of a JADU to 500 square feet and prohibits local ADU ordinances from imposing certain development standards that would prevent an ADU created under Government Code section 66314 through 66322 from being at least 800 square feet.

[1] Not to be confused with the SB 9 of 2021 (Stats. 2021, Ch. 162) regarding urban lot splits and second primary dwelling units.

SB 543 amends state ADU law to specify that allowable square footage of an ADU or JADU refers to square footage of "interior livable space." (See amended Gov. Code, § 66313(d), 66321(b)(2).)

Impact Fees

Existing law exempts ADUS that are 750 square feet or smaller from development impacts fees (DIFs).

SB 543 clarifies that DIFs may not be imposed on an ADU that has 750 or fewer square feet of *interior* livable space or on a JADU with 500 or fewer square feet of interior livable space.

The bill also exempts an ADU or JADU with less than 500 square feet of interior livable space from school impact fees. (See amended Gov. Code, § 66311.5.)

Quantity of ADUs Created Under Government Code Section 66323

Existing state law creates four categories of ADUs that must be approved if they comply with the limited standards provided in Government Code section 66323(a)(1)–(4). These are:

(1) a converted ADU and JADU created on a lot with a proposed or existing single-family dwelling (Gov. Code, § 66323(a)(1));

(2) a detached ADU created on a lot with a proposed or existing single-family dwelling (Gov. Code, § 66323(a)(2));

(3) converted ADUs created in an existing multifamily dwelling (Gov. Code, § 66323(a)(3)); and

(4) detached ADUs created on a lot with a proposed or existing multifamily dwelling.

For some time, there has been uncertainty as to whether ADUs created under Government Code section 66323 could be combined. Some practitioners interpreted the statute to not require local agencies to allow combinations. Initially, HCD took the same position, in its 2020 ADU Handbook. But for the last few years, HCD has taken the opposite position: that yes, combinations are permitted. (See HCD January 2025 ADU Handbook, at p. 19 ["[P]ursuant to Government Code section 66323, subdivision (a), local governments must allow units created pursuant to subparagraphs (1) and (2) together or (3) and (4) together"].)

SB 543 codifies HCD's most recent interpretation by amending Government Code section 66323 to specifically allow combinations. Thus, a lot with a multifamily dwelling can now

have a converted ADU or ADUs created under section 66323(a)(3) *and* detached ADUs created under section 66323(a)(4). And a lot with a single family dwelling can now have a converted ADU and a JADU created under section 66323(a)(1) *and* a detached ADU created under section 66323(a)(2).

ADU Permitting Process

Existing law has long required local agencies to approve or deny an ADU application within 60 days of receiving a complete application. However, state law was silent with respect to incompleteness determinations, subsequent resubmittals, and appealing local decisions on ADU applications.

SB 543 requires local agencies to now:

(1) determine whether an ADU application is complete within 15 business days of submittal;

(2) if the application is if incomplete, within the same 15 days provide the applicant with a list of incomplete items and how to address them;

(3) review a resubmitted application for completeness within 15 business days;

(4) provide the applicant with a written appeal process for any incompleteness determination or denial (to the Planning Commission or City Council, or both); and

(5) provide a final written determination on the appeal within 60 business days of receiving the appeal). (See amended Gov. Code, §§ 66317 [ADUs], 66335 [JADUs].)

SB 1211 – Ministerial Approval

Before SB 1211, state law prohibited cities from requiring off-street parking spaces to be replaced when a garage, carport, or covered parking structure is demolished with the construction of, or conversion to, an ADU. SB 1211 amended this prohibition to also bar cities from requiring replacement parking when an uncovered parking space is demolished for or replaced with an ADU.

For some time, state law has required cities to ministerially approve qualifying building permit applications for ADUs within portions of existing multifamily dwelling structures that are not used as livable space. The term "livable space" was not defined by state ADU law. SB 1211 changed this by adding a new definition stating "'livable space' means a space in a dwelling intended for human habitation, including living, sleeping, eating, cooking, or sanitation."

SB 1211 also increased the number of detached ADUs that lots with an existing multifamily dwelling can have. Previously, lots with an existing or proposed multifamily dwelling could have up to two detached ADUs. Following SB 1211, lots with an existing multifamily dwelling can have

up to eight detached ADUs or as many detached ADUs as there are primary dwelling units on the lot, whichever is less. SB 1211 did not alter the number of ADUs that lots with proposed multifamily dwellings can have — they remain limited to two detached ADUs.

NOTICE OF PUBLIC HEARING
CITY OF MALIBU
PLANNING COMMISSION

The Malibu Planning Commission will hold a public hearing on **TUESDAY, January 20, 2026, at 6:30 p.m. in the Council Chambers, Malibu City Hall**, 23825 Stuart Ranch Road, Malibu, CA on the project identified below.

Public comment can be submitted ahead of the public hearing to planningcommission@malibucity.org for inclusion in the public record. To participate during the public hearing, please review the meeting agenda posted at MalibuCity.org/AgendaCenter and follow the directions for public participation.

ACCESSORY DWELLING UNIT ORDINANCE

Zoning Text Amendment No. 25-003 – Consider a revised amendment incorporating new state law and clarifications to Title 17 (Zoning) of the Malibu Municipal Code to update regulations related to Accessory Dwelling Units and make a recommendation to the City Council

The draft amendment was previously reviewed by the Commission on August 18, 2025, but was not adopted by the City Council. Since that hearing, staff identified additional state ADU/JADU laws that have taken effect or will take effect in 2026. The proposed ordinance before the Commission is a consolidated amendment that implements recommendations provided by the California Department of Housing and Community Development (HCD) and updates to MMC Chapter 17.44 reflecting the latest State ADU/JADU statutes.

Location:	Citywide Project
Case Planner:	Patrick Achis, AICP, Senior Planner (310) 456-2489, extension 247 pachis@malibucity.org

Zoning Text Amendment No. 25-003 is Statutorily Exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Public Resources Code Section 21080.17 and CEQA Guidelines Section 15282(h), which state that CEQA does not apply to the adoption of local ordinances regulating the construction of second units in single-family and multifamily residential zones. Furthermore, the Community Development Director has analyzed the proposed amendments. CEQA applies only to projects that have the potential for causing a significant effect on the environment. Pursuant to CEQA Guidelines Section 15061(b)(3), where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA. The Community Development Director determined that the proposed amendments are required by state law and will not have a significant effect on the environment.

ATTACHMENT 5

A written staff report will be available at or before the hearing for the project. All persons wishing to address the Commission regarding this matter will be afforded an opportunity in accordance with the Commission's procedures.

Copies of all related documents can be reviewed by any interested person at City Hall during regular business hours. Oral and written comments may be presented to the Planning Commission on, or before, the date of the meeting.

For more information, view the City's Accessory Dwelling Units website at www.malibucity.org/adu.

IF YOU CHALLENGE THE CITY'S ACTION IN COURT, YOU MAY BE LIMITED TO RAISING ONLY THOSE ISSUES RAISED AT THE PUBLIC HEARING DESCRIBED IN THIS NOTICE, OR OTHERWISE HELD BY THE CITY, OR IN WRITTEN CORRESPONDENCE DELIVERED TO THE CITY, EITHER AT OR PRIOR TO THE PUBLIC HEARING.

Yolanda Bundy, Community Development Director
